

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Making the actual reduction in the State debt since 1895.....	1,608,210 18
The report of the Comptroller for the fiscal year ended September 30, 1898, shows that there was a balance in the Treasury on that date of.....	566,351 30
The report of the Comptroller for the fiscal year ended September 30, 1899, shows that the total receipts into the Treasury during the year were.....	3,791,298 77
Making the total amount available in the Treasury during the year 1899 of.....	4,357,650 07
The report of the Comptroller for the fiscal year ended September 30, 1899, shows the total disbursements to have been.....	3,649,724 07
Leaving a balance in the Treasury on September 30, 1899, of.....	707,926 00

The substantial reduction in the State debt recorded above has been accomplished in the face of greater appropriations for educational and charitable purposes than were made during any preceding administration. The revenues of the State are steadily growing, and with this continuance of increase, which should come under a wise and economical conduct of State affairs, there is no reason why the tax rate of $17\frac{3}{4}$ cents should not be materially lessened, and, within a few years, the public debt paid off.

Unnecessary offices should not be created and useless ones should be discontinued. Every effort ought to be made to lessen the weight of taxation.

Along this line I think that the office of State Fire Marshal should be abolished. The \$5,500 which is annually appropriated for its support could be withheld, and the powers of the State Insurance Commissioner so enlarged that the duties of Fire Marshal could be performed by one of his deputies.

For the purpose of attracting to the State desirable immigrants the General Assembly of 1896 established the Bureau of Immigration. The experiment has been tried, and in my judgment the results have not been satisfactory.

MARYLAND PENITENTIARY.

The new buildings of the Maryland Penitentiary are completed and occupied. They were erected and equipped at a cost of \$1,071,110.45. This is now the most modern penal institution in the country. It continues to be self-supporting; the receipts for the past year having been \$120,396.46, the largest in its history.

To make room for the new buildings it became necessary to raze some of the workshops. For the good of the inmates, as well as the self-maintenance of the institution, these shops should be restored, others put into operation, and the present ones rearranged. The old Penitentiary building, too, should be remodeled for hospital and other purposes. To carry out this work \$150,000 is needed. With the facilities which would then be had it would not be long before the interest on the Penitentiary Loan could be paid out of the proceeds of the industrial enterprises located there.

HOUSE OF CORRECTION.

There is no institution in the State in which greater or more needed advance has been made in the last four years than the House of Correction. The original structure has been added to and improved so that there is now a dormitory exclusively for women, and a workshop apart from the living quarters, while modern sanitary arrangements have been installed in the whole building. New industrial enterprises have been inaugurated, the proceeds of which have increased the revenues of the State \$12,000 more than in any year prior to 1896. Better discipline is preserved, and the general administration is highly creditable to the State.

STATE TOBACCO WAREHOUSES.

The work of the State Tobacco Warehouses under the provisions of the Reorganization Act of 1898 has been very satisfactory. The first report of the Chief Inspector for the year

ending March 31, 1898, showed the net earnings for the year to be \$15,705.05, an increase of more than \$5,000 over any one year since the establishment of the warehouses. Experience has shown, however, that the law should be amended so as to give the Chief Inspector larger powers over the appointment and removal of subordinates.

MARYLAND AGRICULTURAL COLLEGE.

The Maryland Agricultural College has become one of the most valuable educational institutions in the State. New buildings have been added and much-needed improvement made to the old, while the curriculum has been enlarged. The growing importance and appreciation of the college makes an addition to the main structure imperative.

The offices of State Entomologist and State Pathologist, which are conducted in connection with the college, have been administered so as to receive commendation from almost every county, while the Department of Farmers' Institutes has been productive of much good in the discussion of subjects which are of practical import to agricultural classes.

MARYLAND GEOLOGICAL SURVEY.

The Maryland Geological Survey, inaugurated by the General Assembly of Maryland of 1896, has accomplished important results during the brief period of its operations.

Three large volumes have already been issued, including reports dealing with the building stone industry, magnetic variations, highway improvement, and our agricultural and mineral resources.

Reports of an educational character of the physiography and geology of Maryland have been furnished, and other publications based upon the work of the past years are already in press, including a fourth volume of the survey dealing with the geological and economic resources of the western counties, together with a report of the surveys of both the western boundary and

the Allegany-Garrett boundary line. The surveys of Allegany, Garrett, Cecil and Kent counties are complete, together with portions of Washington, Harford, Prince George's and Queen Anne's counties.

One of the most important branches of the work of the survey during the past two years has related to the study of Maryland highway conditions. This work will afford the basis for future legislation in this direction.

The most permanent and economical methods of road-building may be ascertained after a period of model road-building in the vicinity of the several county towns where the most approved methods of road construction and actual operation may be demonstrated for the benefit of the people.

I recommend that the work of the survey receive the same liberal support of the General Assembly in the future as in the past.

PUBLIC EDUCATION.

The administration of the public schools should be divorced from all political influences. To this end I recommend the adoption of legislation that will insure the minority party representation on all the School Boards in the State. The salaries of the teachers in the public schools should be increased to a degree commensurate with the importance and requirements of the profession, and the tenure of office for teachers should be made more permanent, without regard to the mutations of politics.

The State Normal School is increasing in usefulness, and every year sending forth graduates well equipped as teachers.

The last General Assembly made an appropriation of \$20,000 for a second Normal School at Frostburg. That amount being found insufficient, Allegany County advanced \$5,000 for the erection of the building.

It will be necessary that an appropriation be made for the furnishing of the school, which will be completed in a few months.

A question which must sooner or later be met by the people of Maryland is that of the education of the colored race, so that the colored man may be given tools wherewith to become a good and useful citizen. The most certain method, to my mind, is the establishment of manual training and industrial schools. I recommend that this matter be given your serious attention.

HOSPITALS FOR THE INSANE.

The State Hospitals for the Insane are competently managed. Humane treatment for this class of patients is successfully practiced.

Through the liberal appropriations made by the last two General Assemblies, the Board of Managers of the Spring Grove Asylum was enabled to make many needed improvements for the betterment of the inmates.

The Second Hospital, near Sykesville, is not surpassed by any retreat of its kind. The open door treatment has been introduced for the first time in the State, and has proven eminently satisfactory. The first group of buildings is now occupied by 196 male patients. The second group is almost finished, and will be occupied by females.

The State has never made provision for a separate hospital for the colored insane. From the best information there are fully 350 of these unfortunates in the State. I would recommend that a group of buildings be erected on the grounds at Springfield for this purpose.

The questions of the State care of the pauper insane and the diversion of the liquor license fees of Baltimore City to the income of that municipality are being agitated.

The adoption of the first proposition is worthy of consideration. It has been recommended by the State Lunacy Commission, which has repeatedly submitted its views on the matter to the General Assembly. But if this is done the additional burden thereby imposed upon the State will preclude any diversion of the present revenues.

STATE LIBRARY.

During the excellent administration of the State Library by the present incumbent, the 39,000 volumes have been rearranged and a card catalogue made.

Many valuable pamphlets have been examined, classified and made accessible, and improved library methods adopted.

STATE INSURANCE COMMISSIONER.

The report of the State Insurance Commissioner shows that the receipts from this department have largely increased since the present incumbent was appointed. There is no reason why this increase should not be kept up if the department continues to be wisely conducted and the Insurance Laws so amended as to conform to the changing demands of business. For the past fiscal year the receipts were \$166,795.09, while in 1895 they were \$134,100.98. I ask your attention to the recommendations made by the commissioner.

FISH COMMISSION.

The Fish Commissioners have been most energetic, and from all sections of the State the results of their labors have been commended. Their work should continue to receive liberal encouragement.

BUREAU OF INDUSTRIAL STATISTICS.

The Bureau of Industrial Statistics has been ably conducted. Its report for the year 1898 contains for the first time statistical tables dealing with the industries of Maryland outside of Baltimore City, besides having much other useful and reliable information.

LIVE STOCK SANITARY BOARD.

The Live Stock Sanitary Board has made itself one of the most useful branches of the State Government. The scope of the Board was enlarged by the Act of 1898, which placed upon

it the duty of inspecting the premises of those dairies from which milk was shipped to the cities and towns. It is important to note that the constitutionality of this Act was attacked, but the legality of the measure has been affirmed by the Court of Appeals.

STATE PRINTING.

Money can be saved to the State if the General Assembly will provide means for the concentration of the State printing under the management of one person. Under the present law, the Clerk of the Court of Appeals biennially advertises for and lets a contract for State printing. This contract, however, covers only about one-third of all the printing that is paid for out of the State Treasury. Nearly all the State Bureaus contract for their own printing, which is paid for out of their regular appropriations. I would suggest a Public Printer, with authority to do the work himself or contract for the same.

FIRE PROTECTION TO STATE HOUSE.

The General Assembly of 1898 appropriated \$3,000 to be expended for improvements in the Electrical Equipment of the State House to reduce the danger from fire. This work has been completed, and additional fire protection has been secured by placing on each floor and in different parts of the buildings reels of hose attached to water plugs.

ELECTIONS.

Every safeguard should be thrown around our elections so that they may be made the free and fair index of the popular will. To this end I think that legislation similar to that in force in other States, and known as the Corrupt Practices Act, would go far towards reducing corruption at the polls. A Primary Election Law should also be enacted, under the provisions of which it may be possible for any reputable citizen to become a candidate for public office. As it now stands, it is frequently the case that only the man with money has any hope of winning

in the primaries, and then only if he be the choice of the party organization. This not only precludes worthy citizens of limited means from the realization of honorable political ambitions, but compels the people at the General Election to make their selection between two men neither of whom is the first choice of the majority of the voters.

The Constitution and law should be so changed that contested elections in the case of Clerks of Courts and Registers of Wills, instead of being decided by the House of Delegates, should be passed upon by the Judges of the several Circuit Courts, and in Baltimore City, by the Superior Court of that City. The question at issue in such cases is purely one of law and fact, and in no sense political.

POLICE REORGANIZATION.

The policing of a large city like Baltimore ought to be kept entirely apart from partisan politics, and no political party should be charged with or assume single-handed the preservation of order; every citizen, no matter what his political connection may be, has a right to demand the best protection possible of his life and property. The time has arrived when the Board of Police Commissioners of Baltimore City should be reorganized upon a non-partisan basis. In order to secure undivided responsibility, the power of appointment of Police Commissioners should rest with the Governor, with the consent of the Senate.

OYSTERS.

The steady diminution of the oyster supply of the Chesapeake Bay ought to receive careful consideration. The time has come when the State must take some action for improving the wasteful methods at present employed in catching oysters, and for the encouragement of oyster planting. The oyster fund derived from Tongers' and Dredgers' Licenses continues to be insufficient for the support of the State Fishery Force.

MARYLAND AND VIRGINIA BOUNDARY LINE.

For some years past at various times difficulties have occurred between the citizens of Maryland and the Oyster Police Force of Virginia along the line between the two States. Arrests have been made of the citizens of Maryland, who have appealed to the Executive, claiming that the arrests were made while they were pursuing their daily labor either of oystering or crabbing within the territory of Maryland.

In order to avoid these difficulties commissioners were appointed by the Executives of Maryland and Virginia to mark the boundary line, and their reports, on file, show that the work has been satisfactorily done.

AMENDMENT OF MUNICIPAL CHARTERS.

It sometimes happens that an important amendment to a municipal charter, containing features obnoxious to a majority of the citizens it is to affect, is passed by the General Assembly at the instance of the local officers. To obviate this difficulty I think it well that the General Assembly should require a popular vote on such measures before they become effective.

STATE AUDITOR.

I wish to renew the recommendation which I made in my Message to the General Assembly of 1898, that provision be made for a State Auditor, whose duty shall be to examine the accounts of public officers who receive and disburse State funds, and of institutions that receive State aid.

MARYLANDERS IN CIVIL WAR.

The General Assembly of 1896 authorized me to appoint a commission, without compensation, to compile and publish a History of the Maryland Volunteers in the Civil War. This work has been conscientiously done, and contains the records of 62,000 soldiers and sailors who were an honor to the nation and to the State.

I would recommend that a similar publication be made of the names of Marylanders who volunteered their services during the war with Spain.

SPANISH-AMERICAN WAR.

On the first call for volunteers by the President, April 23, 1898, the State of Maryland furnished one regiment of infantry (Fifth Regiment Maryland United States Volunteers) commanded by Col. R. Dorsey Coale, consisting of fifty officers and 961 enlisted men, aggregating 1011, and two battalions of infantry (First Maryland United States Volunteers) commanded by Col. W. P. Lane, consisting of thirty-two officers and 626 enlisted men, aggregating 658.

On the second call by the President the State furnished one battalion of infantry, consisting of sixteen officers and 426 enlisted men, aggregate 442.

The total strength of these commands was ninety-eight officers and 2,013 enlisted men, aggregate 2,111—this was the full quota of the State asked for by the War Department. In addition to this the Navy Department on the first call and subsequently was furnished twenty-six officers and 430 enlisted men, making a total of 124 officers and 2,443 men, aggregating 2,567 furnished by the State.

The Maryland Naval Battalion manned the United States Auxiliary Cruiser "Dixie" and several United States Monitors. The men comprising the crew of the Dixie were the only organization from Maryland which had actual war service, having participated in the capture of Ponce, Puerto Rico. The State appropriated \$200,000 for preparing troops for the war. Of this sum \$125,000 was used. Vouchers have been filed with the War Department. \$101,080.40 has been refunded to the State, and I hope that the full amount will be shortly returned.

No troops furnished the government were more expeditiously and fully clothed, armed and equipped for service and sent forward than those from the State of Maryland.

Every care and comfort was extended to the sick soldiers

brought home from the camps in the South and placed in our hospitals, and no necessary expense was spared in giving them the best medical attention during their convalescence.

The foregoing gives a fair general idea of the condition of the departments and institutions of the State. I would, however, again suggest that you accord to the reports submitted from these sources a careful hearing, as they contain much information of value that could not well be made within the compass of a paper such as this. With these as a guide, and with the interests of the whole people of the State in view, I trust that you will enact such measures as will redound to its honor and promote the public welfare.

LLOYD LOWNDES.

ANNUAL REPORT

— OF THE —

COMPTROLLER OF THE TREASURY

— OF THE —

STATE OF MARYLAND,

FOR THE FISCAL YEAR ENDED SEPTEMBER 30, 1899.

REPORT

—OF THE—

Comptroller of the Treasury

—OF THE—

STATE OF MARYLAND.

TREASURY DEPARTMENT, COMPTROLLER'S OFFICE,

ANNAPOLIS, January 4, 1900.

To the General Assembly of Maryland:

In pursuance of Section 9 of Article 19 of the Code of Public General Laws, I herewith respectfully submit in detail to your honorable body the financial operations of the Treasury Department for the fiscal year ended September 30, 1899:

RECEIPTS.

Statement "A" shows the total receipts during this period to be \$3,791,298.77, to which sum must be added the balance in the Treasury proper, September 30, 1898, of \$566,351.30, and cash in the Funds' Account of \$402,305.48, making the total receipts for the year, including balances, \$4,759,955.55. Deducting, however, such balances and the amount to the credit of the Sinking Funds and the Common Free School Fund, the ordinary receipts were \$3,791,298.77, or a gain of \$695,984.55 over the year previous. But there must be deducted from the year 1898 the sum of \$125,000, being the amount received from the account of the Military Emergency Fund, which would make the ordinary receipts for 1899 \$820,984.55 in excess of that for 1898. By reference to said Statement "A," however, you will observe there were received \$600,000 00 from the Consolidated Loan of 1899, and \$78,153.65 from the General Government of the United States, as a repayment to the Military Emergency

Fund, aggregating \$678,153.65. Deducting this sum from the excess of \$820,984.55 above shown, would leave a net gain in the ordinary receipts during the fiscal year of \$220,984.55.

A more thorough examination of this statement will be found interesting, in order to ascertain specifically such increase and whether the same is applicable to the ordinary receipts of the State government, or to the Public Schools, School Books and the Sinking Funds, for there is a marked difference between the two.

The amount received from collectors of State taxes during the fiscal year has been very large—\$1,172,596.59—exceeding by far any previous year. The gain in the amount received from said collectors and the tax on Baltimore City Stock is \$81,426.76 over the year previous, notwithstanding that year was in excess of 1897 by \$85,936.81, while the sum received from Tax on Incorporated Institutions shows a loss of \$5,334.00 for the year, hence the total gain from direct taxes amounts to \$76,092.76, a sum specifically dedicated to the Public Schools, School Books and State Debt, or the Sinking Funds, and to this fact is attributable the large payments to the public schools during the past few years, made possible by the prompt collections, as clearly demonstrated by the small amount due at the close of the fiscal year from collectors of State taxes, Table 13 showing \$147,376.21 less than the year 1898, and that, too, with an increased basis for 1899.

Therefore, the remaining amount of this gain of \$220,984.55, viz: \$144,891.79 accrues to the ordinary operating expenses of the government and is largely obtainable by increased receipts over that of the year previous from Tax on Gross Receipts of Corporations \$69,308.08; Excess of Fees of Office, \$15,886.29; Bonus on Corporations, \$37,878.59, etc. Let not this increase mislead you. While the Tax on Gross Receipts of Corporations may equal that in the year now before us, yet the Bonus Tax will fall far short of the year now closed, since such receipts were unprecedentedly augmented by virtue of the formation of so many new corporations with large capital stock, notably, trust companies. The creation of so many new corporations cannot reasonably be expected in 1900, hence this revenue must be largely diminished, estimated by me in Statement "C" to be \$10,000. Again, the fiscal year 1900 has passed sufficiently to state that the revenue from Excess of Fees of Office will show a heavy shrinkage from \$82,200.28, the amount received during the fiscal year. From such sources of revenue as these must be paid the judiciary, civil officers, the expenses of the present legislature, and all appro-

priations to State and charitable institutions; therefore, I trust you may exercise the utmost caution and prudence in whatever appropriations you may make.

Your attention is respectfully directed to the amount paid into the Treasury by Registers of Wills from tax on commissions of executors and administrators and collateral inheritances, aggregating \$100,305.72 as against \$184,155.44 for the year 1898, or a loss of \$83,849.72. While this tax must necessarily vary, yet the commissions allowed for its collection is highly exorbitant—25 per cent. In this connection I can but renew the recommendation made in my previous report to his excellency, Lloyd Lowndes, Governor.

“Prior to the year 1892 all Clerks of Courts and Registers of Wills were allowed a commission of 5 per cent. upon all State moneys collected by them, save and except the Clerk of the Court of Common Pleas, whose commission was and still remains 1 per cent—a very fair and reasonable compensation to all for the labor and responsibility of handling the State's money. By reference to Chapter 564 of the Act of 1892, you will find these rates of commission changed, in so far only as they relate to Registers of Wills. By that statute they are allowed a commission of 25 per cent. upon such collections, one-fourth of entire amount—a most exorbitant rate, in my opinion—and this tax can only be paid to the Registers; must be paid within a specified time, and if not paid becomes, in some instances, a lien upon property, as, for example, the Tax on Collateral Inheritances. Every official should be compensated fairly and equitably, according to the service rendered, but when the compensation is more than this, the same is exorbitant, and is made at the expense of every taxpayer, and is derogatory to the Treasury of the State. Such statutes should unquestionably be repealed.”

The receipts from Tax on Mortgages aggregated during the year \$18,563.02, or a gain of \$11,985.49. This revenue should and will gradually increase each year, and while much difficulty has been experienced in the past in securing the basis as well as collecting the tax, yet every new form of taxation has its difficulties, but I see no reason why all these should not be overcome and this tax collected as readily as any other.

It is a source of much gratification to state that of the \$125,000.00 borrowed by the State to defray the expenses of arming and equipping the Maryland troops in the Spanish-American war, \$78,153.65 of this amount was received into the Treasury during the fiscal year from the General Government of the United States, as a repayment for the costs and expenses so incurred, with a strong probability that this sum will be further increased during the fiscal year 1900 by a second repayment of claims now held under adjudication. The revenues of the State during the fiscal year were sufficient to warrant the taking from the Treasury proper the sum of \$46,846.35, which together with

\$78,153.65 received as above shown from the United States Government, wiped out the entire war debt, and that, too, without the levying of a fraction of a mill upon the taxpayers of the State.

DISBURSEMENTS.

The disbursements during the fiscal year, as shown in detail in Statement "B," aggregate \$3,649,724.07, being \$213,622.57 in excess of the previous year, leaving a balance on hand September 30, 1899, of \$707,926.00, as against a balance of \$566,351.30 for the fiscal year 1898. The largely increased disbursements during the year is plainly manifest by reason of the payments of \$522,579.14 on account of the Consolidated Loan of 1899 and \$400,000.00 to the Sinking Funds.

This balance of \$707,926.00 is a very gratifying one, but for fear this large amount may be misleading I would respectfully remind you that such is not the balance January 2, 1900, nor is this entire amount applicable to the ordinary necessities of the government. Indeed, only a small portion thereof is such. By reference to Statement "L" you will find that on October 1, 1899, \$377,000.19 of this amount belonged to the Public Schools, \$142,500.00 thereof being distributed on that day, hence the balance of \$330,925.81 was alone available to meet the heavy October payments and the specific purposes for which such moneys were levied and collected.

ESTIMATES.

In Statements "C" and "D" will be found the probable receipts and disbursements for the fiscal year 1900. In these two statements you will observe there is contained the sum of \$300,000.00 on account of the Consolidated Loan of 1899, being in anticipation of a further and final issue of this loan to this extent in building an armory for the Fifth Maryland Regiment.

FREE SCHOOL FUND.

Statement "E" will show you in detail the condition of the Free School Fund at the close of the fiscal year, the gross receipts and balance to the credit of said fund at the close of the last fiscal year amounting to \$96,833.44, or a gain of \$19,417.87. While the ordinary accretions to this fund are slightly in excess of last year, yet this gain is largely attributable to the proceeds of sale of 3500 shares of stock of the Baltimore & Potomac Railroad Company at \$5.10 per share, aggregating \$17,850.00, which stock had been ordered stricken off the books of the Treasury Department by Joint Resolution No. 15 of the Acts of 1892, but

owing to the diligence of the present Treasurer was found to possess the value above shown. It was deemed advisable by the Treasury officials that such moneys should be placed to the credit of the Common Free School Fund. Accordingly an order was passed by the Board of Public Works and this sum is now invested at par in the Consolidated Loan of 1899, as well as the \$9,125.00 to the credit of Carroll, Frederick and Washington counties, making an investment of the very highest order.

The \$118,100.00 of the B. & O. 6 per cent. preferred stock held by the State since 1878 for the use of the Common Free School Fund, and upon which dividends have been passed, was not sold during the year as contemplated, a satisfactory bid not being received therefor. Under the reorganization of the said company it was determined to accept an equal number of shares of the new certificates of said company in lieu of the cash value of \$75.00, and by paying an assessment of \$2.00 per share the company guaranteed the cash value thereof at \$77.00. This stock the State now owns and deems advisable to hold for the present.

SINKING FUNDS—CASH AND STOCK ACCOUNT.

Statement "E" also exhibits the condition of the several Sinking Funds at the close of the fiscal year, in which is shown many changes. By virtue of the maturity and redemption of the Defence Redemption Loan, January 1, 1899, and the issue on that date of the Consolidated Loan of 1899, Chapter 219, of 1898, several of the Sinking Funds have been wiped out, since their loans were either liquidated or consolidated, while the amounts standing to the credit of those funds were transferred to the Consolidated Loan of 1899 Sinking Fund, viz.: Exchange Loan of 1886, Exchange Loan of 1889 and the Defence Redemption Loan.

The total receipts during the year, including the balances from the year previous, aggregate the large sum of \$974,813.18, viz.:

General	\$43,338 18
Exchange Loan of 1886.....	12,092 50
Exchange Loan of 1889	17,640 65
Defence Redemption Loan.....	443,562 31
Penitentiary Loan.....	114,735 00
Insane Asylum Loan	24,165 00
Consolidated Loan of 1899.....	319,270 54
Total.....	\$974,813 18
Deduct balances September 30, 1898.....	497,298 64
Actual receipts during year	\$477,514 54

Of this sum only \$77,514.54 is increment from investments, liquidated, however, January 1, 1899, by the

retirement of the securities then held, while the unprecedentedly large sum of \$400,000.00, the largest by far in the history of the State, was cash transferred from the Treasury, an amount far in excess of the requirements necessary to maintain the integrity of the Sinking Funds, but permissible by reason of large collections.

Permit me again to refer to my former report :

"The above large uninvested balance of \$497,298.64 may at first blush occasion some surprise, but the wisdom of the Treasury officials in thus carrying this large balance is very apparent upon a closer examination of the situation. This balance could not be used to liquidate so much of the Defence Redemption Loan maturing January 1, 1899, inasmuch as the holders of said loan had the option, under Chapter 219 of the Acts of 1898, to exchange such holdings for the new issue of the 'Consolidated Loan of 1899,' issued under said Act—a privilege accepted by \$1,104,187.00 out of \$1,151,787.00 outstanding—leaving only \$47,600.00 of said loan to be retired at maturity.

"Had the Treasury officials gone into the market to purchase safe and reliable securities to this extent, a very heavy premium, likewise a commission, would necessarily have been paid, but inasmuch as the State on the first day of January, 1899, only a few days distant, will issue a new loan, as authorized by the Act above referred to, to be known as the 'Consolidated Loan of 1899,' not only to refund the outstanding debt of the State, but to issue for new improvements to the extent of \$900,000.00, viz. :

Maryland Penitentiary, completion of.....	\$300,000 00
Army Fifth Regiment, Infantry	300,000 00
Second Hospital for Insane, additional buildings..	220,000 00
House of Correction, new buildings	80,000 00

it was deemed the part of wisdom to retain this balance and invest every dollar that may be to the credit of its Sinking Funds on that date in this new loan, virtually retiring the State debt to that extent."

This policy has therefore been pursued, and by taking the balance of \$497,298.64 brought down from the last fiscal year, together with the increment accruing to the various Sinking Funds, January 1, 1899, and cash transferred from the Treasury proper during the fiscal year, the Treasury officials were enabled to take for the following Sinking Funds the entire amount of the new loan issued for completion of the Penitentiary, Second Hospital for the Insane and the House of Correction, aggregating \$600,000.00, besides placing to the credit of those funds the following cash, as will fully appear in Statement "F." :

	Stock.	Cash.
Consolidated Loan of 1899	\$505,000 00	\$287,575 00
Penitentiary Loan	35,000 00	8,338 18
General	49,000 00	65,735 00
Insane Asylum Loan.....	11,000 00	13,165 00
Totals.....	\$600,000 00	\$374,813 18

This amount of cash was brought down in order to take up the \$300,000.00 of that portion of the Consolidated

Loan of 1899 for the Fifth Regiment Armory whenever the same should be issued. A site for said armory has recently been secured, costing \$125,000 00, leaving \$175,000 00 for the erection of a building. Consequently the remaining part of this loan has been issued as of January, 1900, the whole being taken by the State as follows:

Schools in sundry counties	\$ 9,125 00
Common Free School Fund.....	15,488 00
Consolidated Loan of 1899, Sinking Fund.....	275,387 00
Total	\$300,000 00

Hence the condition of the Sinking Funds January 1, 1900, including increment accruing that day, will be:

	Stock.	Cash.
Consolidated Loan of 1899	\$780,387 00	\$19,763 00
Penitentiary Loan	35,000 00	8,863 18
General	49,000 00	66,470 00
Insane Asylum Loan.....	11,000 00	13,330 00
Totals.....	\$875,387 00	\$108,426 18

Therefore, the Treasury officials have taken the entire issue of \$900,000.00 of the Consolidated Loan of 1899 for its Sinking Funds and schools, without one cent of cost for premium or commissions, besides placing to the credit of those funds the large balance as above shown of \$108,426.18.

OYSTER FUND.

In Statement "H" is shown the apparent, although not true condition of the Oyster Fund.

The receipts, including balance brought down, aggregate \$59,733.80, while the disbursements are shown to be \$55,444.09, leaving a balance of \$4,289.71 on hand September 30, 1899—a sum immediately wiped out in the beginning of the fiscal year 1900. Besides this, bills unpaid, for salaries and expenses brought over from last year, amounting to \$35,000.00, were paid from the revenues accruing since October 1, 1899, extinguishing almost to the cent the entire revenues received to January 1, 1900, leaving nearly the entire salaries and expenses of the force since October 1, 1899, unpaid—a most deplorable condition. The ordinary receipts and disbursements of this fund for several years past is as follows:

	Receipts.	Disbursements.
1890.....	\$58,178 87	\$70,955 91
1891.....	52,260 38	73,645 81
1892.....	46,652 83	79,665 11
1893.....	48,437 12	91,302 03
1894.....	48,271 69	56,422 25
1895.....	64,994 09	61,410 42
*1896.....	64,244 02	67,340 86
1897.....	67,270 73	†68,761 97
1898.....	57,718 58	55,083 92
1899.....	56,590 88	55,444 09

The balance to the credit of this fund September 30, 1890, was \$101,106.24. Notwithstanding this large balance but diminished revenue for the next few years, as well as increased disbursements, the fund on the 30th of September, 1894, showed an overpayment of \$4,306.99, at which time its embarrassment really began. During the next two years the revenues were not sufficient for its maintenance by the sum of \$15,000.00, the members of the Board of Public Works, in the meantime, loaning their individual credit to pay the officers of the force, until the revenues of the next year became available to retire such liability. This course has been pursued by the present administration, as being, under the circumstances, the only practical method, hoping the revenues in the future might, under Chapter 418, 1896, be sufficient to make it self-supporting. This hope has not been realized. On the contrary, each year has shown, with one exception, smaller receipts, with every indication that the present season, 1899-1900, will yield a much smaller return. The Legislature of 1896, Chapter 346, sought to aid this fund, but only yielded a temporary relief—borrowing from one year to be paid back from the next. It should have made a direct appropriation.

The cost and expenses of the force must and have increased with each succeeding year, by reason of extra cost in the maintenance and equipment of old boats, until the deficit of six years has become such a burden that you must come to its rescue or the force must be disbanded and the great oyster industry of the State completely annihilated. Permit me again to refer to my former Report :

"The last Legislature was appealed to in vain, and unless the next one takes hold of this matter intelligently and heroically, both our oyster industry and navy will suffer materially for lack of such assistance. Indeed, this industry is the main support of many thousand citizens of this State, and it is, in my judgment, the duty of the Legislature of 1900 to come to the assistance of the State Fishery Force, by making an appropriation sufficient to relieve it of its present embarrassment."

* Including \$15,000.00 borrowed from Treasury, Chapter 346, 1896.

† \$15,000.00 borrowed from Treasury, Chapter 346, 1896, repaid.

This important question is for you to determine, and I plead with you to treat it fairly and liberally.

ASSETS.

In Statement "I" will be found the productive and unproductive assets of the State. While the stock of the Washington Branch of the Baltimore & Ohio Railroad Company has paid no dividend since 1895, yet the value of the stock warrants the same in being carried among its productive assets.

STATE DEBT.

The total funded debt of the State as of September 30, 1899, is plainly shown in Statement "J," aggregating \$5,709,326.13, as against \$9,284,986.24 for the year previous. In order to properly understand this difference, reference must be had to my former report and Chapter 219 of the Acts of 1898. Said statute provided for the refunding and consolidation of the entire State debt of \$9,284,986.24, except \$600,000.00 of Maryland 3½s, 1911, issued under Chapters 164 and 166, 1896, as well as the issuance of a new loan of \$900,000.00 for the Penitentiary, Second Hospital for Insane, House of Correction and Fifth Regiment Armory before mentioned. Much of this debt was not due; but inasmuch as the Defence Redemption Loan of \$3,000,000.00 maturing January 1, 1899, could not be liquidated, although its Sinking Fund exceeded the loan by \$825,020.11 by virtue of its large holdings of the following State stocks: Exchange Loans of 1886, \$980,632.00; 1889, \$369,800.00, and 1891, \$558,552.05, amounting to \$1,908,984.05, nearly all of which was not due, the Treasury officials, as well as the Legislature of 1898, deemed it the part of good financiering to refund the entire debt, thereby cancelling the large holdings of the State's own stock in the Sinking Funds, amounting to \$4,167,190.11, and consolidating the four old loans, as well as the new one, into "the Consolidated Loan of 1899." Notwithstanding the intricacy and labor of this trust, with its many details, in locating \$2,521,600.00 coupon bonds, save \$7,400.00 and all other work incidental to the refunding and issuance of such a large amount, the same has been successfully accomplished at the small cost for engraving certificates, advertisements, etc., of \$2,500.00, the sum appropriated being \$10,000.00. Upon the present Treasurer, Hon. Thomas J. Shryock, this work largely devolved, and it is to his skill and financial ability the same was brought to a successful consummation.

In said Statement "J," at the close of the fiscal year, the gross debt, after consolidation is shown to be, \$5,709,326.13, with an offset of \$3,112,283.18, leaving the net debt of the State at that date, \$2,597,042.95. In said statement is not included the \$300,000.00 issue for the Fifth Regiment Armory, since the commission had failed up to that time to secure a site therefor. Subsequently however, the Commission has secured a site for the same, and the building will soon be in course of construction. Therefore, the Treasury officials have issued this sum as of January 1, 1900, completing the entire issue of "the Consolidated Loan of 1899." After taking this issue of \$300,000.00, the debt of the State on January 1, 1900, will stand as follows :

3 per cent. Exchange Loan of 1899.....	\$	7,400 00
3½ per cent. Penitentiary Loan		500,000 00
3½ per cent. Insane Asylum Loan		100,000 00
3 per cent. Consolidated Loan of 1899		5,401,926 13
		<u>\$6,009,326 13</u>

CONTRA.

Stock Annapolis Water Co	\$	30,000 00
" Farmers National Bank, Annapolis ..		46,470 00
" Balto. & Fredericktown Turnpike Co.		11,000 00
" B. & O. R. R. Co., Washington Branch		550,000 00
Northern Central Railway Co. (Mortgage) ..		1,500,000 00
Stocks in Sinking Funds		875,387 00
Cash in Sinking Funds.....		108,426 18
		<u>\$3,121,283 18</u>
Net debt of State		<u>\$2,888,042 95</u>

Permit me to call your attention to what has been accomplished during the past four years :

Net debt September 30, 1895.....	\$3,005,253 13
" January 1, 1900	2,888,042 95
Decreased in four years, three months.....	<u>\$117,210 18</u>
And yet in meantime have issued new loans amounting to	<u>\$1,500 000 00</u>
Actual reduction.....	<u>\$1,617,210 18</u>

In other words, there has been paid during this period \$1,617,210.18 of the State debt: and that, too, with a tax rate for loan taxes of two cents less. The record speaks for itself.

ASSESSMENT AND LEVY OF 1899.

Statement "K" shows the assessed value of property, subject to the 17½ per cent. tax rate, except tax on capital stock of corporations, amounting to \$611,539,646.00, or a gain in basis over previous year of \$8,213,550.00, with a corresponding gain in tax of \$14,579.07.

To show the increased basis of taxation under the new assessment law of 1896, I herewith submit the following table :

Years.	Basis.	Amount of Levy.	Rate.
1896.....	\$540,461,747 00.....	\$ 959,319 53.....	17½ cents.
1897.....	607,965,272 00.....	1,079,138 27.....	17½ cents.
1898.....	603,326,096 00.....	1,070,903 51.....	17½ cents.
1899.....	611,539,646 00.....	1,085,482 88.....	17½ cents.

Let me remind you, however, such increase is not beneficial to the Treasury proper one cent, but is specifically dedicated to the Public Schools, Free School Books and the Sinking Funds.

PUBLIC SCHOOL TAX.

In Statement " L " is shown the levy, receipts and disbursements on account of the Public School Tax for the fiscal year 1899. The receipts during the year aggregate \$774,725.57, together with the balance on hand October 1, 1898, of \$338,938.25, make the large sum of \$1,113,663.82. There was disbursed during the year \$736,663.63, leaving the balance of \$377,000.19 on hand for future distribution. During the past six years, the following amounts have been distributed and paid to the public schools of the State :

1894..	\$600,294.57.
✓ 1895..	601,088.04.
1896..	591,753.00
1897..	496,224 69.
1898..	827,366 71.
1899..	736,663.63.

FREE SCHOOL BOOKS.

Statement " M " exhibits the amount of levy, receipts and disbursements on account of Free School Books during the fiscal year ; receipts, \$147,084.26 ; disbursements, \$146,401.39, the latter being \$3,598.61 less than the amount appropriated—\$150,000.00—for such purpose by Chapter 135, 1896. This difference was apportioned to Worcester county, but by reason of legal complications as to who were the proper school authorities in that county, the said sum was not paid until after the close of the fiscal year, and until the case had been finally adjudicated by the Court of Appeals.

By said statement it will be apparent that the 2 cents of the 17½ tax rate, yielded nearly sufficient revenue to make this account self-supporting, but by reason of the heavy deficits for the preceding three years the said fund still shows a deficit of \$133,702.11.

RECEIPTS IN DETAIL.

From Tables Nos. 1 to 12, inclusive, are clearly shown in detail the receipts into the Treasury during the fiscal year from Clerks of Courts, Registers of Wills, etc. The receipts from Clerks of Courts and others shown in Table No. 1 aggregate the sum of \$917,923.20. By deducting the amounts due the Oyster Fund and certain municipalities on account of Liquor Licenses would leave from this source a net revenue to the State in round figures of \$500,000.00, wholly applicable to the ordinary receipts of the State government, and from which is largely paid the expenses of the legislature, civil officers, judiciary and the large appropriations to the various institutions, State, educational and charitable. An effort, no doubt, will be made, so far as Baltimore city is concerned, to divert this revenue from the State into the city treasury. Such a loss would embarrass and vitally affect beyond measure the credit of the State. The State must have sufficient revenue to meet promptly all its obligations, and any diminution to this extent must be met by levying an additional direct tax sufficient to cover such loss. For the first year, an additional 12 cents to the 17 $\frac{1}{2}$ would not recoup this loss, or a virtual tax rate of 30 cents on each \$100.00. This rate could, of course, be lowered in a short time, but not below 8 cents. Therefore, if you deem it to the best interest of the State to divert such revenue, you *must levy* an additional tax as above mentioned to cover this loss.

STATE TOBACCO INSPECTIONS.

The State Tobacco Warehouses are now being operated under the new law of 1898, Chapter 314, and during the year the increased earnings were very marked. By reference to Table No. 7, the net earnings from May 8, 1898, to April 1, 1899, the close of the year as fixed by said Act, aggregate \$15,705.05. It is but proper to state, however, that from the reports so far submitted since that time, such increase has not been maintained.

MISCELLANEOUS.

Tables Nos. 13, 14, 15, 16 and 17 show the balances due, exclusive of interest, by sundry officers and corporations. Your attention has already been directed to the amounts due from collectors, as shown in Table No. 13, being \$147,376.21 less at the close of the fiscal year than at the same period last year, yet this sum, \$434,742.31, is much larger than it should be; the amount due, \$27,322.88, by one county, Montgomery, exceeding by \$6,238.01, the entire

levy for 1899. This result is largely due to the district system of collections, and with few exceptions those counties having such a system are further in arrears than those in which the collections are made by one person. In this connection, I would again renew the recommendations made in my former Report.

GENERAL TREASURY LAW.

"Notwithstanding the provisions of the Constitution, many local laws are now upon the statute books, allowing discounts and 'extending the time for the collection of taxes,' other than as authorized by the general law. Such laws are perplexing and cumbersome to this department, and, in my opinion, clearly in violation of Section 33 of Article 3 of the Constitution. All these laws should be repealed and a general Treasury law be enacted for the whole State, experience having demonstrated that this is the safest and most speedy method of collecting the State's revenues.

SPECIAL AUDITOR.

"Believing that the interest of the State demanded a more thorough and personal inspection of the books and accounts of State officers handling public funds, as well as various institutions receiving State aid, than it was possible for me under existing statutes to give; for while large powers are given me under Section 2 of Article 6 of the Constitution, yet I do not construe such statute as conferring upon me sufficient authority to personally examine a State office, such as offices of the Clerk of a Circuit Court or Register of Wills, in order that I might inquire under oath into the condition of the affairs of such offices, their method of doing business, how the moneys received by them are expended or applied, and whether or not they are complying with the several provisions of law. Besides, to make such examinations throughout the State by the Comptroller himself, would be a physical impossibility.

"The Legislature of Maryland at every session appropriates thousands of dollars to various charitable, State and reformatory institutions, many of which, indeed most of which, are not required to make any report of moneys so appropriated. The only examination to which they are subject is by a committee from the Legislature, and that not very thorough. These institutions should in my opinion, be subject to a very thorough examination, the result of which should be reported in detail to the *Comptroller*, in order that he may intelligently advise the Legislature of the wisdom of such appropriations.

"That a rigid and careful examination should be made of all State offices and institutions receiving State aid, by duly authorized and competent persons, there cannot be the slightest doubt, in order that the State should receive its own and the public the best and most intelligent service. These opinions I held when called to fill the responsible position I now occupy, and my official connection with the Treasury Department has only strengthened those convictions. * * * Had such bill become a law, I am fully persuaded a more intelligent and trustworthy service would now be given the State."

CONCLUSION.

I have endeavored to present fairly and as succinctly as the importance of the subjects so treated demanded—the

operations of the Treasury Department during the fiscal year, the recital and labors of which have been found both agreeable and pleasant. Whatever may be found worthy of commendation in the management of the State's finances, must be equally shared by my co-laborer, Hon. Thomas J. Shryock, State Treasurer, upon whose financial ability I have relied, and whose devotion to the highest interest of the State I have always found paramount.

My relations to this Department will soon terminate, but it is with pleasure I shall lay down its cares and responsibilities to so distinguished a gentleman as the Hon. Joshua W. Hering, whose strict integrity and financial skill is a sufficient guarantee that the affairs of that Department will be executed faithfully and well.

My thanks are especially due all the clerks in the Treasury Department for their uniform courtesy and kindness, as well as the fidelity with which they have each served the State.

Respectfully submitted,

PHILLIPS L. GOLDSBOROUGH,

COMPTROLLER OF THE TREASURY.

THIRTY-THIRD
ANNUAL REPORT
— OF —
The State Board of Education
SHOWING THE CONDITION
— OF THE —
PUBLIC SCHOOLS OF MARYLAND
— FOR THE —
YEAR ENDING JULY 31, 1899.

BALTIMORE:
WM. J. C. DULANY CO., STATE PRINTERS.

1900.

STATE OF MARYLAND,
OFFICE OF THE STATE BOARD OF EDUCATION,
BALTIMORE, December 20, 1899.

TO HIS EXCELLENCY LLOYD LOWNDES,

Governor of Maryland:

SIR—I have the honor to transmit to you the Annual Report of the State Board of Education for the fiscal and school year ending July 31, 1899, with accompanying documents, as required by law.

Very respectfully,

Your obedient servant,

E. B. PRETTYMAN,

Secretary.

REPORT

OF THE

STATE BOARD OF EDUCATION.

The following summary, in connection with the accompanying tables, exhibits in a condensed form, the most important facts connected with the administration of the public school system of the State, for the fiscal and school year ending in the City of Baltimore, December 31, 1898, and in the counties, July 31, 1899.

The several items are compared with the corresponding items for 1897 in the City of Baltimore, and for 1898 in the counties :

Number of schools in Baltimore city.....	199	
" " the counties.....	2,304	
Total.....		<u>2,503</u>
Being an increase in 1899 of.....	38	
Number of different pupils, city.....	96,312	
" " " counties.....	133,020	
Total.....		<u>229,332</u>
Being a decrease in 1899 of.....	6,671	
Highest number enrolled in one term, city.....	67,890	
" " " " " counties...	128,206	
Total.....		<u>198,096</u>
Being a decrease in 1899 of.....	4,020	
Average number in daily attendance, city.....	54,683	
" " " " counties....	78,002	
Total.....		<u>132,685</u>
Being a decrease in 1899 of.....	1,854	

Annual Report of the

Number of teachers, city.....	1,915
" " counties.....	3,212
Total.....	<u>5,127</u>
Being an increase in 1899 of.....	140
Number of months schools were open, city.....	10
" " " " " counties..	8.8
Average for the State.....	<u>9.4</u>
Being an increase in 1899 of.....	½ month
Receipts from all sources, city.....	\$1,684,135 87
" " " " " counties.....	1,592,047 02
Total.....	<u>\$3,276,182 89</u>
Being an increase in 1899 of....	\$240,476 03
Amount paid for teachers' salaries, city.....	\$1,124,538 06
" " " " " counties.....	9,465,549 57
Total.....	<u>\$2,071,087 63</u>
Being an increase in 1899 of....	\$104,130 23
Amount paid for building, repairing and furnishing school houses, city.....	\$248,122 49
Amount paid for building, repairing and furnishing school houses, counties.....	176,725 87
Total.....	<u>\$424,848 36</u>
Being an increase in 1899 of....	\$108,997 10
Amount paid for books and stationery, city.....	\$82,653 11
" " " " " counties..	64,651 41
Total.....	<u>\$147,304 52</u>
Being an increase in 1899 of.....	\$6,078 13
Amount paid for rent, fuel and other incidentals, city.....	\$83,359 61
Amount paid for rent, fuel and other incidentals, counties.....	82,779 32
Total.....	<u>\$166,138 93</u>
Being a decrease in 1899 of.....	\$13,927 46
Total expenses for public school purposes, city... ..	\$1,557,456 30
" " " " " counties..	1,592,047 02
Total.....	<u>\$3,149,503 32</u>
Being an increase in 1899 of.....	\$97,176 46

Excluding the City of Baltimore, the county schools show the following results:

Number of schools.....	2304	
Increase in 1899.....		<u>31</u>
Total number of scholars enrolled.....	133,020	
Decrease in 1899.....		<u>8,275</u>
Highest number enrolled in one term.....	128,206	
Decrease in 1899.....		<u>6,720</u>
Average number enrolled.....	117,616	
Increase in 1899.....		<u>2,545</u>
Average number in daily attendance.....	78,002	
Decrease in 1899.....		<u>2,263</u>
Number in first grade.....	35,087	
Increase in 1899.....		<u>233</u>
Number in second grade.....	20,895	
Increase in 1899.....		<u>1,141</u>
Number in third grade.....	21,247	
Decrease in 1899.....		<u>617</u>
Number in fourth grade.....	18,773	
Decrease in 1899.....		<u>1,490</u>
Number in fifth grade.....	14,329	
Decrease in 1899.....		<u>897</u>
Number in sixth grade.....	9,320	
Decrease in 1899.....		<u>350</u>
Number above sixth grade.....	5,669	
Decrease in 1899.....		<u>193</u>
Number studying book-keeping.....	3,144	
Increase in 1899.....		<u>667</u>
Number studying algebra.....	8,883	
Increase in 1899.....		<u>835</u>
Number studying philosophy.....	4,373	
Increase in 1899.....		<u>341</u>
Number studying drawing.....	41,828	
Increase in 1899.....		<u>14,573</u>
Number studying geometry.....	3,435	
Decrease in 1899.....		<u>145</u>
Number studying physiology.....	24,530	
Decrease in 1899.....		<u>988</u>
Number studying Latin.....	2,439	
Increase in 1899.....		<u>243</u>

Number of teachers (including assistants), men— white, 727; colored, 213; total.....	940	
Women—white, 1,905; colored, 367; total.....	2,272	
Total.....		<u>3,212</u>
Average number of months schools were open...8.8		
Amount receive from State school tax (white schools) free school fund and academic dona- tions.....	\$527,357 26	
Increase in 1899.....	\$43,415 58	
Amount received from State school tax approp- riated to colored schools.....	\$111,918 23	
Increase in 1899.....		<u>\$14,034 06</u>
Amount received from county tax.....	\$696,622 67	
Increase in 1899.....		<u>\$49,729 72</u>
Amount paid for teachers' salaries.....	\$946,549 57	
Increase in 1899.....		<u>\$72,354 23</u>
Amount paid for building, repairing and furnish- ing school houses.....	\$176,725 87	
Increase in 1899.....		<u>\$73,547 47</u>
Amount paid for books and stationery.....	\$64,651 41	
Decrease in 1899.....		<u>\$3,863 41</u>
Amount paid for supervision and office expenses..	\$45,145 62	
Increase in 1899.....		<u>\$1,208 39</u>
Amount paid for incidental expenses, including rent and fuel.....	\$82,779 32	
Increase in 1899.....		<u>\$1,421 39</u>
Amount paid for interest.....	\$6,023 22	
Decrease in 1899.....		<u>\$2,843 42</u>
Amount paid for miscellaneous expenses.....	\$33,204 49	
Increase in 1899.....		<u>\$5,389 71</u>
Amount of indebtedness paid.....	\$134,424 37	
Decrease in 1899.....		<u>\$77,413 21</u>
Total expenses for public school purposes in the counties.....	\$1,592,047 02	
Increase in 1899.....		<u>\$40,958 71</u>

The items which show an increase are:

Teachers' salaries.....	\$72,354 23	
Building, repairing and furnishing.....	73,547 47	
Supervision and office expenses.....	1,208 39	
Incidental expenses, rent and fuel.....	1,421 39	
Miscellaneous	5,389 71	
	<hr/>	
Total increase.....		<u>\$153,921 19</u>

The items which show a decrease are:

Books and stationery.....	\$3,863 41	
Interest	2,843 42	
Indebtedness paid.....	77,413 21	
	<hr/>	
Total.....		<u>\$84,120 04</u>
Showing a net increase of expenditures in 1899...		<u>\$69,801 15</u>

STATE TABLES.

STATE TABLES.

The State tables annexed present the usual summary of interesting facts.

Table "A" shows the population of Maryland by counties and the number of white and colored, according to the census of 1890.

Table "B" shows the population between five and twenty and the quarterly distribution of the State school tax to the white schools of the several counties and the city of Baltimore.

Table "C" shows the colored population between five and twenty, and the quarterly distribution of the State school tax to colored schools of the several counties and the city of Baltimore.

Table "D" shows the assessed value of the property subject to taxation in the several counties, with the amounts, as "State School Tax," "Free School Fund," "Academic Fund," "Appropriation to Colored Schools," and the "County School Tax."

Table "E" shows receipts from all sources, with the totals, (including balances carried over.)

Table "F" shows the expenditures of the several counties under the items of teachers' salaries, incidental expenses, books and stationery, building, repairing and furniture, supervision and office expenses, miscellaneous, interest, indebtedness paid, with the balance on hand and totals.

Table "G" shows the number of pupils in the primary grades, and the number studying special branches.

Table "H" shows the number of schools in each county, the number of months schools were open, the number of teachers, male and female, the number of different pupils, the average number of pupils enrolled and in attendance, and the highest number enrolled in one term.

Table "I" shows the cost of the colored schools and the statistics (under the same heads as those mentioned in Table "H") of the colored schools separately.

Table "K" shows the receipts from all sources for colored schools (including balance carried over.)

Table "L" shows the expenditures for colored schools under the heads mentioned in Table "F."

Table "M" gives the statistics of the several colleges receiving State donations, and of the State Normal School.

Table "N" gives the statistics of the several schools and academies receiving State donations.

The county reports give in detail the enrollment and the average attendance for each term, and the expenses of each individual school, under the heads of rent, fuel, repairs, incidentals, furniture, blackboards and stoves, books, and teachers' salaries. Every citizen can thus know what the school in his district has cost, and may become the auditor of the accounts. It is believed that no State in the Union furnishes a similarly minute detail of expenses.

REPORT OF THE SECRETARY.

REPORT OF THE SECRETARY.

The summary included in the report of the State Board of Education, and the State tables immediately following, give a comprehensive view of the condition of the public schools during the last school year, ending July 31, 1899. The statistical reports of the Board of Commissioners of Public Schools of Baltimore City, and of the School Commissioners of the several counties of the State, present, in minute detail, the facts concerning the schools, and show the receipts and disbursements for their support.

A copy of the usual circular requesting supplementary reports, dated November 23, 1899, was mailed to each County Examiner in the State.

The following are the supplementary reports that have been received to January 1, 1900:

ALLEGANY COUNTY.—*John E. Edwards, Examiner.*

During the past year we erected and furnished twelve school-houses, two six-room brick and the balance one and two-room frame buildings. Four more are in course of construction, one four-room brick, one three-room frame and two two-room frame. The greater number of these replace old buildings.

The course of study in our County High School has been strengthened and advanced, and now includes full college preparatory work. Especial attention will be given to the study of English Classics. There are three departments—Ancient Languages and English, Modern Languages, Sciences and Mathematics. The enrollment is 80.

The Teachers' Institute, January 1–6, 1899, was a success, and was well attended, very few of our teachers being absent, and these chiefly on account of sickness.

CHARLES COUNTY.—*Thomas M. Carpenter, Examiner.*

In reply to your letter of the 23rd, I would respectfully state that I can add but little to the information given in the tabulated report. The schools for white and colored children were opened for nine months of the school year. The enrollment of pupils shows an increase of about five per cent. over that of last year, although the average attendance is somewhat smaller, which is

doubtless due to the severe blizzard of February last, which prevented a greater mass of the children from attending the schools for more than a month.

Sixteen schools are now supplied with libraries of from twenty-five to one hundred volumes, consisting of books of reference, biography, history and fiction. The influence of these libraries is apparent in every school where the pupils possess this advantage, as is shown in the greater general knowledge of the pupils and the judgment displayed in their work in the school-room. The library is very helpful to the teacher, but, unfortunately, it has never received that aid and encouragement which it so justly merits. The various school districts seem not to appreciate its worth; the School Board is unable to foster it alone, and, indeed, frequently dare not comply with the law without encroaching upon the funds which are absolutely necessary to keep open the schools for nine months of the year.

The County Teachers' Institute, which was held in the Town Hall at La Plata, was attended by all teachers in the county, and its beneficial effect has been most strikingly illustrated in the school-room, where the many valuable hints on the profession of teaching, from the Institute Conductor and other distinguished educators, was thoughtfully impressed on the minds of the teachers, and its practical effects are clearly apparent in the rapid progression of the schools.

The vaccination law has been rigidly enforced, and no child is now enrolled who has not presented a certificate of vaccination. Whilst this has had the effect of keeping a number of children out of the schools, we deemed it expedient to conform strictly to this provision of the sanitary law.

In conclusion, I will say that, whilst we have many difficulties to overcome, our schools, in the main, are doing fairly well; our teachers are earnest and enthusiastic workers, patiently waiting when the legislators of our State will increase the appropriation in order that they may receive a just compensation for their services, or a compensation that will accord with the dignity of their profession.

MONTGOMERY COUNTY.—*W. B. Burdette, Examiner.*

I herewith submit the Annual Report of the Public Schools of Montgomery County for the year ending July 31st, 1899.

The schools were kept open from September 15th to June 15th, giving the teachers an increase in salary over the previous year. We regret to say that the average attendance and the enrollment of the pupils for the past year was less than last. This is due largely to the severe winter and the presence of contagious diseases in various parts of the county.

The school property is only in fair condition. Many of the houses are in need of repair and others to be replaced with new ones. A small number of the schoolrooms are without sufficient blackboards, charts and other helps that the teacher needs. These things are gradually being supplied. Four new houses were built and two were enlarged during the past year.

TALBOT COUNTY.—*Alexander Chaplain, Examiner.*

The statistical part of our report of the Public Schools of Talbot County for the year ending July 31st, 1899, exhibits an increased enrollment in both the white and colored schools. This is gratifying, though in a few districts the schools are overcrowded. Additional accommodations in new buildings and enlarged school houses at the beginning of the scholastic year, still leaves, however, two or three points without sufficient room for the steadily increasing school population. At these points the enrollment of pupils is too large for one teacher to handle with any degree of efficiency, and suggests graded schools with additional rooms and additional teachers.

As a body our teachers worked during the year with uniform industry, zeal and efficiency, and they fairly earned the grateful thanks of school officials, patrons and pupils. The sympathetic and responsive spirit of the teachers made the work and instruction at the meetings of the Teachers' Association and Teachers' Institute both effective and enjoyable.

HIGH SCHOOLS AND GRADED SCHOOLS.

There is a growing sentiment among progressive school men that the public schools of the United States ought to be distinctively American. And among our educators there are now two high school parties: The one advocating the contrivance of, a purely American system of free development; the other contending for a complete co-ordination of the high school and the college. Members of the party of free development claim that the best equipment for life is the legitimate aim of the high school, and that preparation for college should be confined to a separate and, if possible in large cities or towns, distinct department. Many large cities and towns have compromised between the two high school parties and have given pupils the choice between two or more courses. In these large cities and towns the party of co-ordination with the college has, of course, ceased to claim the high schools as properly belonging to the class of schools called in America preparatory schools, where they would exclude, except as incidental subjects, the branches of study not traditionally required, or likely to be required as a basis for college work.

Popularly, we think only of a literary training in the public schools. But logically, pupils are entitled to musical, artistic and manual and industrial education. They are entitled to be trained from the very beginning for life's work and life's joys.

The older view of education is exclusively intellectual, or as consisting merely in the increase of knowledge, for the *individual*. But the growing tendency, along the line of the American idea of free development for the high school and the large graded schools, is to substitute society for the individual as the educational unit. The social estimate of education is based upon the contribution which it makes to the social efficiency of the individual, the additional value which it gives him as a member and servant of the social body. To society it does not matter what the individual knows, but only what the individual does and what the individual is. The courses in the high school and the large graded schools, according to the view of the party of free development, should infuse into the public school a practical element, effecting closer connection between it and life.

Because for the majority of the people, especially for the people without property, the public school is so little a preparation for life and action, are so many of the parents without anything more than a passive interest in it.

The step taken by the University of West Virginia not only of accepting all graduates of good high schools, but also of conferring the highest degree without any knowledge of either Greek or Latin, meets with the highest approval, we trust, of all advanced and advancing educators. The advocates of free development for the American high school confidently look forward to a time when all the colleges will accept all graduates of good high schools.

THE KINDERGARTEN.

As economic conditions press more and more heavily upon us, it is sad but true that pupils drop out of school earlier. Statistics show that pupils remain in school but very few years, few of them more than five or six years. Half of them drop out of school on reaching the age of eleven, a third of them on reaching the age of ten.

To meet the present condition with reference to the growing tendency to drop out of school in the fifth year grade and the sixth year grade, it will be necessary for the State to reach down lower, as to age for pupils, and to organically unite the kindergarten to the public school system, and to make manual training and self-activity the center of education around which all other school exercises shall be systematically grouped.

Kindergarten methods are the grandest revelation for all teachers who are not blinded by presumptuous ignorance, to see what had hitherto been revealed only to the few whose free minds had swept beyond the range of fettered thought. They

are the "open door" to the introduction of the pupil from school to life and action; and it is with pleasurable pride that we announce the purpose of our School Board to introduce, if not estopped by present legislative enactment, at least kindergarten methods into the schools of our county, both white and colored. For our colored schools this is more important, if possible, than for our white schools, and for them we would particularly emphasize the "open door" to life and action through manual and industrial instruction.

COLORED SCHOOLS.

We have been active in building large and properly equipped school houses for colored children, and school facilities for them now fairly meet their needs, except at one or two points. Their teachers are gradually improving both in scholarship and teaching ability, and the frequent meetings of their Teachers' Association gives us opportunities for developing the training class work begun in the Normal Institute, which was held for five days just preceding the opening of their schools for the present scholastic year on the 11th day of September.

The Teachers' Institute for Colored Teachers was conducted upon the plan of the "Summer School," with teachers' training classes, emphasizing the work of instruction in *how* to teach reading and other branches of study. The lecture plan was discarded, except one lecture given by me each day in the general session. Indeed, my inclination is towards the belief that the lecture plan, unless the teachers are provided with thoughtfully prepared syllabi that are pedagogically and psychologically sound in matter and arrangement, is the worst possible plan of teaching anybody, and must prove a fruitless means of educational improvement for our teachers and the unification of the schools of the State in matters of method and management.

CONCLUSION.

Dr. Harris says: "Careful students of the history of education have noticed the fact that its reforms swing from extreme to extreme." There was a time when our schools were conducted somewhat upon the so-called "Pueblo Plan," which has been described by its advocates, in the discussion of individual instruction, as having the pupil "work as an individual, promoted as an individual and graduated as an individual." The element of recitation was almost entirely unknown, except as an occasional perfunctory and mechanical performance. Now the pendulum has swung to the other extreme and many of our schools have degenerated into recitation rooms and the teacher to a machine for hearing recitations.

Instead of teaching, study and current investigation, it is one weary round of recitation from morning to evening. The pupil must study at home, and what teaching is done is performed by the parent.

In the concluding paragraph in my "Manual of the Public Schools of Maryland," for 1896-97, you will find the following: "The Examiner will understand that the *recitation* is a power wholly in the hands of the teacher, either for good or evil. The weakness or excellence of everything in the spirit, or government, or instruction, or discipline of the school will in some manner manifest and focus itself in the recitation; and, if he desires to uplift and do good for an inferior teacher and hopes to reform the mischievous practices in the work, the school process must be grasped and scientifically handled at this point."

One of the specially weak points in our schools is the make-up of the programme. In grappling with this problem, teachers fail to consider many of the factors that properly enter into this vital point of school management. For the teacher to keep in constant unity with all the grades and classes composing the school is one of the greatest strains to be encountered, and it cannot be even partially accomplished without a systematic programme or time schedule for the movement of the whole. In this the most thoughtful care should be expended upon the arrangement of the time-schedule for study and the desk-work period, class reciting being sure of engagement. The instructor who harbors the impression that teaching is hearing the recitation, is almost sure to leave pupils to shift for themselves out of it. But the teacher should exhibit as much skill, and should serve the pupil as efficiently, in providing for study and the desk-work period as in conducting the recitation. What the pupils are to accomplish during the desk-work period should be as definitely placed in the programme as the topic of recitation. The success of the work depends largely upon the preparation of the teacher in setting up for guidance and inspiration the ideal performance for each day. Without this there will be no assured precision of action, and no certainty and force in execution.

The whole purpose of the movement in the school process should be unity. The ideal to be secured in the grade, or grades, during the study and the desk-work period, is the greatest possible stress of attention on the thought or principle to be worked out. This is unity, not primarily of pupils among themselves, but with the teacher; although the teacher may at the time be employed, or conducting a recitation. If the pupils focus their attention on the thought which the teacher has planned for them, unity among themselves will be incidentally secured. But the great and principal reason for the programme of study and desk-work periods is the training of pupils into the power of self-limitation by imposing limits upon them. This gives the teacher the best opportunity for training the pupils to hold continuously to one object of thought—to the power of concentration and continued effort.

WASHINGTON COUNTY.—*George C. Pearson, Examiner.*

In accordance with your request, I hereby offer a supplementary report.

The increase of our school population from year to year demands greater accommodations. Two or more rural school districts unite upon a location convenient to both districts and ask to be consolidated into a graded school, and these two causes, in connection with the results that time brings to all buildings, necessitates the building of new houses, which are constructed so as to give a greater degree of health and comfort to the pupils.

The pupil of the rural school who has passed through the fifth grade can secure a place in the most convenient graded school if he is able to pass its requirements for admission. Many of the children of the county have taken advantage of this opportunity and have increased the number in the higher rooms of the graded school, and thus they have been benefited by longer and better instruction, and the pupils of the rural school belonging to the five grades have a much better chance of improvement than they would if the higher grades remained in the country school, for reasons that are obvious.

The Pollard system of reading has been introduced into the first four grades of the graded schools the present year, but this system has been tried as an experiment for nearly three years in a few schools with much pleasure and success. It has been very gratifying to observe in the experimental school that the pupils who have been under this instruction find it a pleasure to do the work, and do it willingly, and are able to learn words entirely new to them. What a delight it has been to notice the face of a child beam with pleasure when he has, through his unaided efforts, discovered a new word!

In this way the child is taught phonics. It is not the barren way they were taught in years gone by, but by the law of association they learn to associate the sound and the objects (in the form of stencil pictures), which are impressed on the mind when memory is most lasting.

Five new buildings have been erected during the past year, two of which are graded schools. Both of these are the outgrowth of former rural schools and three of them are buildings of one room each. The School Board purchased one of the buildings heretofore rented for school purposes, and in this way has added the past year six new buildings to the number already built. All of these buildings, save one, have been covered with slate roofs, and have received the improvements that the use of buildings built in past years have demonstrated to be better.

The public schools of the county would be benefited by some better method of supervision and construction of our public roads. Poorly constructed roads make the distances to school-houses much greater than if they were elevated and dry. Bad roads and epidemics contribute largely to a decreased average attendance of pupils.

The high schools of the county prepare boys and girls for college. Two members of the graduating class of '99 were admitted by an examination to Princeton College. Efforts have been made to give to those who expect to become teachers a course of study, looking forward to their life-work, and it has borne good results, as has been evidenced by a number of the graduating class who have entered the corps of teachers and are now at active or substitute work. It would be well if those who look forward to teaching could visit schools under the supervision of their teachers, instead of making these visits without them.

It would be well if some extended course of training in those branches pertaining directly to the profession of teaching could be engrafted into our high school work, as it would redound to the advancement of the schools of the county.

No examiner can successfully administer the important duties of supervision intrusted to him unless he has a source from which he can procure thoroughly prepared teachers who have a live interest in the domain of education.

Report of the Board of Visitors and Governors of Washington College.

CHESTERTOWN, MD., November 15, 1899.

To the President of the State Board of Education:

SIR—In compliance with the requirement of Section 17 of Article 77, of the Code of Public General Laws of Maryland, the Board of Visitors and Governors of Washington College make the following report:

During the past collegiate year there were in attendance at the College one hundred and eighteen (118) students, forty-one (41) of whom were in attendance in the Normal Department.

At the Annual Commencement of the College, held at Chestertown on Wednesday, June 21st, 1899, there were five (5) students graduated with the Degree of Bachelor of Arts (A. B.) from the Collegiate Department, as follows: Howard U. Clogg, T. Allan Goldsborough, Wm. C. Pool and Walter L. Wheatley, all of Maryland, and J. Hall Anderson, of Delaware. And from the Normal Department were graduated nine (9) students, as follows: Virgil F. Ward, and Misses Lillian P. Benton, Ida G. Deane, Cora C. Emory, Ethel J. Marlin, Eva H. Wallis, Lydia E. Whitworth and Lottie L. Woodall, all of Maryland, and Thomas H. Hudson, of Delaware. Each of the graduates from the Normal Department were given a certificate, as provided for in Section 3, of Chapter 63, of the Acts of the General Assembly, passed at the January session of 1896.

The Faculty of the College comprises nine professors and teachers, including graduates of the Universities of Virginia and Michigan, Dickinson College and the Woman's College of Baltimore.

The College is now in a more flourishing condition than for many years, and with a Faculty composed of intelligent educators gives assurance that a thorough education in the prescribed course of studies, is now within the reach of the youth of our section of the State.

JOS. A. WICKES,

President of the Board of Visitors and Governors.

MARION DeK. SMITH, *Secretary.*

ARBOR AND HIGHWAY DAY.

Arbor and Highway Day was observed by all the public schools of the State on the 14th day of April, 1899, in pursuance of the following proclamation by His Excellency, the Governor:

EXECUTIVE DEPARTMENT, ANNAPOLIS, MARYLAND.

PROCLAMATION.

TO THE PEOPLE OF MARYLAND:

WHEREAS, by joint resolution No. 15, passed by the General Assembly of Maryland, at the January session of 1894, the Governor is authorized and directed to issue annually a Proclamation designating a day in April for the planting of trees to be known as "Arbor and Highway Day;" and

Whereas, it has been suggested to me that it would be appropriate, at this time, to call the attention to the necessity for the care and preservation of the birds of our fields and forests;

Now, therefore, I, LLOYD LOWNDES, Governor of the State of Maryland, do hereby designate Friday, the 14th day of April, 1899, as Arbor and Highway Day, and I do recommend that the day be devoted by the people of this State to the planting of trees, and I especially recommend to parents and teachers in our schools that they encourage their children or those under their influence to plant or transplant at least one forest shade tree on that day, by the side of a public road or about their school-house, and that they be urged to study the habits and needs of our birds and their young, with a view to their preservation and increase.

It is hoped by the observation of this custom to counteract the evil effects resulting from the rapid destruction of forests and birds in our State, and to maintain a due proportion of forest land, which is essential to the comfort, health and convenience of every country.

THE GREAT SEAL
OF
MARYLAND.

Given under my hand and the Great Seal of Maryland.

Done at the City of Annapolis, on the 23d day of March, in the year of our Lord eighteen hundred and ninety-nine.

By the Governor:

LLOYD LOWNDES, *Governor.*

RICHARD DALLAM, *Secretary of State.*

The following was the Arbor Day program at the Maryland State Normal School.

PROGRAM.

EXERCISES IN THE MAIN HALL.

HYMN.—"I Heard the Robin Singing," - - - *Old German.*

RESPONSIVE READING, - - - *Matthew VI.*

INVOCATION (to be recited in concert).

READING OF THE GOVERNOR'S PROCLAMATION.

Miss S. E. Richmond, Vice-Principal.

SONG.—"Greeting," - - - *Mendelssohn.*

Senior Class.

RECITATION.—"Forest Hymn," - - - *Bryant.*

Martha L. Brown.

READING.—"Song Birds' Petition," - - *Hon. George F. Hoar.*

Neva Boone.

RECITATION.—"Charity Concert," - - - *Moore.*

Martha E. Amoss.

Piano Obligato by Prof. Gaul.

SENTIMENTS.—

Everett A. Hidey,

Ethel Watts,

Lidie Joyce,

Cynthia E. Yost,

Jennie Ludwig,

Merle Englar.

SONG.—"The Voice of Spring," - - - *Labbitt.*

Junior Class.

ADDRESS.—

Dr. E. B. Prettyman, Principal.

SONG.—"Summer Fancies," - - - *Metra.*

Middle Class.

MARCH TO THE TREE.

OUT-DOOR EXERCISES.

PLANTING OF TREE (on Carrollton Avenue) - - *Class of '99.*

AMERICAN ELM, Ulma Americana.

Named in honor of RUDYARD KIPLING.

SONG.

PLANTING OF IVY, - - - *Classes of 1900 and 1901.*

DECORATION OF CLASS TREES.

SONG.—"Auld Lang Syne."

ASSOCIATIONS.

THE MARYLAND STATE TEACHERS' ASSOCIATION held its thirty-second annual session at Convention Hall, at Ocean City, Worcester County, Md., July 11th, 12th and 13th, 1899.

The following minutes of the proceedings have been furnished by the Secretary:

Thirty-second Annual Session Maryland State Teachers' Association, Convention Hall, Ocean City, Md., July 11, 12 and 13, 1899.

TUESDAY EVENING.

CONVENTION HALL, OCEAN CITY, July 11, 1899.

The Maryland State Teachers' Association met this evening at 8.30 o'clock in thirty-second session, and was called to order by the President, Professor John T. White, of Cumberland, Md.

The exercises opened with a solo by Miss Combs.

Rev. James C. Nicholson invoked the Divine blessing upon the session of the Association.

The President then introduced the Hon. James E. Ellegood, of Salisbury, who made the address of welcome. After many humorous allusions to the superstitions and legends of the past in connection with the history of the Eastern Shore, the speaker extended to the members of the Association a most cordial greeting and a hearty welcome to the hospitalities of Ocean City.

Professor E. B. Prettyman, State Superintendent of Public Instruction, happily responded to the address of welcome, and thanked the former speaker for his kind words, after which he spoke of the noble work of the teacher, and the exalted position he occupies.

His Excellency, Lloyd Lowndes, Governor of Maryland, and President of the State Board of Education, was next introduced to the Convention by President White, and addressed it upon the subject of "Popular Education." The speaker paid a glowing tribute to those engaged in the profession of teaching, and especially regretted the very small salaries paid to the teachers for their arduous labors.

The Association was next entertained with a duet by Miss Combs and Miss Tate.

President White then delivered his "Inaugural Address," which was replete with ennobling thought and suggestions to all engaged in the profession.

On motion, President White was excused from further attendance upon the sessions of the Convention, on account of serious illness in his family, the Association expressing its regrets and sympathy at the President's affliction and absence.

The Association was again favored with a solo by Miss Tate, after which, on motion, an adjournment was ordered till Wednesday, 10 o'clock, A. M.

WEDNESDAY A. M.

OCEAN CITY, MD., July 12, 1899.

The Maryland State Teachers' Association met this A. M. at 10 o'clock, and was called to order by Vice-President Boblitz:

The secretary read the minutes of the last session, which were declared approved.

Miss Tate next rendered a solo, after which Prof. Joseph Blair, of Sparrow's Point, read a well prepared paper on the subject of "The Kindergarten as a Part of the Public School System."

Dr. S. E. Forman, State Institute Conductor, next read an interesting paper on "What Knowledge is of Most Worth."

Presiding Officer Boblitz then announced the following committees:

On Resolutions:

E. B. PRETTYMAN,
DR. J. C. NICHOLSON,
JNO. E. EDWARDS,
DR. H. B. GWYNN,
CHAS. E. DRYDEN.

On Auditing Accounts:

EPHRIAM L. BOBLITZ,
L. L. BEATTY,
GEORGE BIDDLE.

On Enrollment:

REV. A. G. HARLEY,
JNO. E. McCAHAN,
GRAHAM WATSON.

A resolution offered by Mr. Pearson was referred to the Committee on Resolutions, without reading.

"The Teacher's Self-Training" was the subject of a paper prepared and read by Miss Ella M. Pippin.

Remarks complimentary on the above paper were made by Dr. H. B. Gwynn.

Several resolutions were offered at this stage, and at once referred to the Committee on Resolutions, without further action.

On motion, the Association adjourned until 4 P. M.

AFTERNOON SESSION.

WEDNESDAY, July 12, 1899.

The Convention re-assembled this P. M. at 4 o'clock with Mr. E. L. Boblitz, Vice-President, in the chair.

After a musical selection the chair introduced Prof. Basil Sollers, of Baltimore, who addressed the Convention upon the subject of "Nature Studies," and invited the teachers especially to assist in making a complete catalogue of all the varied plant life of the State, but more especially of the rarer varieties.

A motion to appoint a Committee on Nominations was adopted and the chair appointed as said Committee Messrs. H. G. Weimar, of Cumberland; John P. Clark, of Mt. Washington; Dr. A. E. Sudler, of Sudlersville; Z. P. Wharton, of Stockton; Miss Victoria Hayden, of Pikesville.

After a musical selection Miss Carolyn Wharton entertained the Association with a finely rendered recitation.

Dr. T. H. Lewis, President of Western Maryland College, Westminster, next addressed the Convention upon the "Ethics of Expression," and was followed by Prof. F. D. Morrison, Superintendent of the School for the Blind, who explained the workings of the school, its methods and splendid results.

On motion, the Association then adjourned till 10 A. M. Thursday.

MORNING SESSION.

OCEAN CITY, MD., Thursday, July 13, 1899.

The Maryland State Teachers' Association reconvened this date at 10.30 A. M., and was called to order by Vice-President E. L. Boblitz.

The minutes of the morning and the afternoon session of Wednesday were read and declared approved.

The chair next introduced to the Convention Dr. John S. Fulton, Secretary of the State Board of Health, who addressed the Association upon "Teaching Hygiene in the Public Schools."

Telegrams from Prof. W. B. Clark, of Johns Hopkins University, and Prof. A. H. Hopkins, of the Bel Air High School, regretting their inability, through sickness, to be present at the sittings of the convention, were read.

On motion, the thanks of the Association were tendered Dr. Fulton for his very able paper.

Miss Combs next rendered a very pleasing solo, and was followed by Miss S. E. Richmond, of the State Normal School, who read a most excellent paper on "Our Aims as Teachers," to which the audience gave undivided attention.

A paper on "Voice Training," by Miss Agnes M. McLean, of Normal School, was then read by the author, to the pleasure and profit of all who heard it.

The last paper was further considered and discussed by Prof. Edward Reisler, of Talbot County, and Prof. Chas. T. Wright, of the Havre de Grace High School.

On motion, an adjournment was ordered till 4 P. M.

AFTERNOON SESSION.

OCEAN CITY, MD., Thursday, July 13, 1899.

The Maryland Teachers' Association re-assembled at 4 P. M., Mr. E. L. Boblitz, presiding.

The minutes of the Morning Session were read and approved.

Mr. John D. Worthington read the following report of the work of the Executive Committee:

JULY 13, 1899.

Your Committee begs leave to report that after a tenure of office extending over a period of two years they are now ready to summarize their work, and ask for their discharge.

In April, 1898, the Committee met at the Maryland State Normal School, and in deference to the wishes of your President and a widely expressed wish and desire from teachers throughout the State, unanimously decided to postpone for one year the usual meeting in order that teachers might avail themselves of the opportunity to attend the meeting of the National Association, held in Washington, D. C., July 10-14.

Accordingly, headquarters were established at the Ebbitt House, where every effort was made to cater to the comfort and convenience of those in attendance, as well as to keep in line with our ambitious sister republics, who miss no opportunity to show what they are doing in the educational field.

Nearly two hundred teachers enrolled their name at headquarters, and from the popularity shown by the ever shifting throng of visitors it is believed that fully five hundred persons enjoyed their comfort and convenience.

Early in March last the resignation of Col Charles B. Rogers as a member of the Committee was received and accepted, and the valuable services of Mr. Edwin Hebden, of Baltimore City, were secured, he having taken part in all subsequent proceedings.

About the same time, in response to the sentiment of the State expressed up to that date, the Blue Mountain House was selected as the place to hold the present meetings, but in May, in response to a more general expression of opinion on the subject, the Committee reconsidered its previous action and accepted the very cordial invitation of the Eastern Shore that the Association meet at Ocean City.

That the selection was a happy one, needs no argument from the Committee, since an unusually full attendance attests its popularity.

With no disposition to enlarge upon the long line of routine work which fell to its lot, but with an expression of its high regard and appreciation of the kindness it has received at your hands, the Committee submits its brief report and asks for its discharge.

On behalf of the Committee:

JOHN D. WORTHINGTON, *Chairman*.

On motion, the report was adopted.

Prof. Albert S. Cook, Principal of the Reisterstown High School (Franklin), next read a paper on "Educational Ideals Among the Greeks."

An interesting paper upon "The Pollard System of Teaching Reading" was then read by Miss Anna L. Miller, of the Hagerstown High School.

The subject was further discussed by Miss M. Luckett Iglehart, of Anne Arundel County, and Mr. George C. Pearson, Examiner of Washington County.

Mr. George Biddle, Chairman of the Auditing Committee, read the following report:

OCEAN CITY, MD., July 12, 1899.

We, the undersigned, the Auditing Committee of the Maryland State Teachers' Association, have examined the within report of the Treasurer and compared it with the vouchers. We find the report correct, and beg leave, respectfully, so to report.

REPORT OF TREASURER.

To the Maryland State Teachers' Association:

OCEAN CITY, MD., July 12, 1899.

RECEIPTS.

Balance cash on hand at date of last Report, July 14, 1897....	\$132 72
Received membership fees, 1897.....	81 00
1898.	
June and July—Received donations from the following counties:	
Washington, Montgomery, Harford, Worcester,	
Talbot.....	50 00
Prince George's, Baltimore, Garrett, Cecil, Anne	
Arundel	50 00
Carroll, Charles, Allegany, Howard.....	40 00
July —Received membership fees from J. D. Worthington.....	15 00
Received from sale of badges from J. D. Worthington.....	11 40
1899.	
March Received donations from four counties.....	40 00
April Received donations from Baltimore City and four coun-	
ties	50 00
May Received donations from four counties.....	40 00
June Received donations from State Board of Education.....	10 00
Received donations from six counties.....	60 00
July Received donation from one county.....	10 00
	<hr/>
	\$590 12

DISBURSEMENTS.

1897.	
July 15—Paid A. W. Hawks, lecturer and elocutionist....	\$25 00
Paid Harriette M. Brown, elocutionist, railroad	
tickets.....	15 00
Paid Rowland Davies, musical director.....	19 00
Paid J. P. Shannon, manager hotel, account P.	
A. Witmer and others.....	44 00
Paid Finan & Donnelly, for printing.....	14 25
Paid Herald Publishing Co., for advertising.....	6 75
Paid C. C. Fulton & Co., for advertising.....	4 80
Paid A. S. Abell Co., for advertising.....	3 45
Paid John T. White, chairman executive com-	
mittee, accounts.....	5 38
Paid John T. White, chairman executive com-	
mittee, accounts.....	4 75
Paid Daniel M. Long, elocutionist.....	5 50
Paid Albert F. Wilkerson, secretary.....	25 50
Paid Alexander Chaplain, treasurer.....	26 30
Paid John L. Sanford, account of 1895.....	2 88
1898.	
July Paid Ebbitt House, two accounts.....	77 00
Paid John D. Worthington, chairman executive	
committee.....	9 64
Paid E. L. Torsch, account for badges.....	24 00
Paid Alexander Chaplain, treasurer.....	26 08
Balance to pay expenses of meeting, July, 1899...	250 84
	<hr/>
	\$590 12

Respectfully submitted,

ALEXANDER CHAPLAIN,
Treasurer.

The following officers were elected to serve the ensuing year:

For President, L. L. Beatty, Centreville, Queen Anne's County; First Vice-President, Reister P. Russel, Reisterstown, Md.; Second Vice-President, Wm. G. Smith, Chestertown, Kent County; Recording Secretary, A. F. Wilkerson, Baltimore, Md.; Corresponding Secretary, Miss H. E. Boblitz, Frederick, Md.; Treasurer, John E. McCahan, Baltimore, Md. Executive Committee—Edwin Hebden, Baltimore, Md.; John E. Edwards, Cumberland, Md.; Dr. Wm. D. Straughn, Snow Hill, Md.; Thomas H. Williams, Salisbury, Md.; F. Eugene Wathen, Annapolis, Md.

The following report of the Committee on Resolutions was read by the Chairman, and, on motion, adopted:

OCEAN CITY, MD., July 13, 1899.

The Maryland State Teachers' Association, in thirty-third annual convention assembled, representing every phase of education, hereby affirms its belief in and devotion to the American system of public education.

Resolved 1. That this State should claim its equitable proportion of the proceeds of the sale of public lands for the support of its public schools, and we respectfully urge upon our Senators and Representatives in Congress that they use their best efforts to secure this claim.

2. We believe that the school should be the educational centre of the section in which it is located, and therefore advise that carefully selected district school libraries should be organized and maintained in each school district, and that a Public School Teachers' Library should be established in each county.

3. We believe that in full recognition of the professional nature of our calling suitable professional preparation of school teachers and superintendents is indispensable and that their tenure of office should be determined solely by their fitness. In this connection we take pleasure in commending and endorsing the administration of Dr. William T. Harris, the United States Commissioner of Education, and we trust that his salary will soon be made equal to that of a cabinet officer.

4. We commend to the careful study of all our members the reports emanating from the National Educational Association as the opinions of the most noted educators of this country on the most important educational topics.

5. We desire to call the attention of school officers to the educational as well as the utilitarian value of the typewriter, and to encourage its introduction as far as practicable into the High School curriculum.

6. *Resolved*, By the Maryland State Teachers' Association, now in session, that their Presiding Officer and the Chairman of the Executive Committee be and hereby they are instructed to take the necessary steps during the next session of the General Assembly to secure an annual appropriation of five hundred dollars to be expended under the provisions of law in meeting the necessary expenses incurred in holding the annual meetings of this Association.

7. That it is the sense of this Association that the State School tax should be increased in proportion as the public debt of the State is diminished, thereby lessening the tax heretofore needed for the sinking fund.

8. That a special committee of five be appointed by the chair to take into consideration the general state of the Association. They shall report at the next annual meeting of the Association, offering such recommendations, suggestions, resolutions or amendments, if any, as may by

them be deemed advisable, to the end that the work of this Association shall be brought to conduce to the need, use and benefit of all connected with the cause of education in this State.

Resolved, further, that the said report be taken up on the first day of the said next annual meeting.

9. That the able and instructive papers that have been read at the present session of this Association would be profitable reading for all the teachers of the State, and, therefore, should be published (with the consent of the State Board of Education) in the next Annual State School Report.

10. We hereby express our appreciation of the courtesies we have received during this session from the representatives of the press in their able and comprehensive reports of the proceedings of the Association; from the railroad officials and from the proprietors and agents, and especially from Col. John A. Waggaman, proprietor of the Atlantic Hotel, and Major George D. De Shields, manager of the Atlantic Hotel, by tendering our thanks to them; and we also hereby thank the musicians for their successful efforts in making the meeting pleasant and profitable, and the presiding officers for their impartiality, dignity and efficiency with which they have directed our proceedings. We also hereby tender our thanks to the representative of the Remington Standard Typewriter, Mr. Howard Spelman, and to Mrs. E. B. Jordan, stenographer and typewriter, for good offices extended to us, and also to the elocutionist of the evening, Miss Wharton, also to the representative of the Smith Premier Typewriter Co., Mr. T. W. Donohu, and to Miss M. G. Fuller, stenographer and typewriter. All of which is respectfully submitted.

E. B. PRETTYMAN, Chairman.
J. C. NICHOLSON,
JOHN E. EDWARDS,
H. B. GWYNN,
C. E. DRYDEN.

The Chairman appointed, as per resolution 8th, the following Committee:

E. B. PRETTYMAN,
GEORGE C. PEARSON,
F. EUGENE WATHEN,
EDWIN HEBDEN,
CHARLES E. DRYDEN.

The minutes were then read and approved.

On motion, the Association adjourned *sine die*.

(Signed.)

A. F. WILKERSON, *Recording Secretary*.

THURSDAY, July 13, 1899.

Address of Prof. Joseph Blair,

On "*The Kindergarten as a Part of the Public School System*,"

Delivered at the State Teachers' Association, at

Ocean City, Md., July 12, 1899.

Mrs. President and Fellow-Teachers of the State of Maryland:

I consider it a privilege to be allowed to come before you on this occasion to talk for a few minutes on a subject, very dear to me, and one in which every educator of this State will ere long be deeply interested.

I shall endeavor to not weary you with statistics, nor to go into long biographies, of men and women, who have been instruments in giving this kindergarten system of education to the world. I will try, as far as possible, to confine myself to kindergartens and their relation to public schools.

It is, indeed, with pardonable pride that I say: I enjoy the distinction of having had under my care the first public school kindergarten south of the Mason and Dixon line, and if the pronouns *I* or *we* look very large, I crave an indulgence, as I have had to rely almost entirely on personal experiences in preparing this paper. It matters little to us, as far as this paper is concerned, whether Pestalozzi, in Switzerland, Froebel, in Prussia, or Robert Owen, in Scotland, established the first kindergarten.

We know that these men, working for the good of their race, all about the same time established their respective schools, under different names, having as their primary object the training of small children.

Robert Owen, at New Lanark, Scotland, called his "An institution for forming the character of children," and if Froebel chose to call his "A child's garden," wherein, we might ask, lies any great difference? I would like to change both names and call them, what they truly represent to me, "The republic of childhood."

Give us kindergartens as a part of the public school system of Maryland, and in twenty years, I care not who is made superintendent of the reformatory schools of the State, for boys and girls, there will be no charges against him for mismanagement. He will have no children to manage. This may seem to you a very optimistic statement, nay—you may even go further and say: We are not impressed by such extravagant arguments, but before closing your mind in this direction, listen for a few minutes to the principles on which these kindergartens are founded.

First, we have neatness. When we say neatness, we do not mean that certain forms of work shall look well, but we mean that teachers, school-room, children and surroundings are always neat. But we ask, can this be done?

Of course, if the teacher is not neat, she cannot expect her pupils to be neat. I am sure there is not a county in the State that does not allow janitor fees for schools, and in kindergarten or other schools there is never an excuse for an untidy school-room or unclean children. But you ask, how is it possible to have neat children from poor or ignorant families? I have seen children whose parents were uneducated and very poor among the neatest in a kindergarten of over one hundred children.

Instill into those little minds the idea of neatness, and teach them that those habits that tend to destroy this condition are not proper, and you will find that, led by their little children, the habits of the parents will be changed for the better. I have heard kindergartners in my own school say, on their first visit to the homes of some of their children, that the dirt and squalor was shocking to behold, but before the end of the first year of the child in school the home had taken on a new appearance, and on the bare walls and now well dusted mantle were to be seen many of the articles of handiwork made by the little ones in the kindergarten.

Indeed, I have seen some such mothers with tears in their eyes, and heard them say, "If I only had been trained in this way when I was a child it might have been different."

After neatness we have gentleness. I will not go so far as to say that man is entirely a creature of circumstances, although, to a very great extent, I am a believer in this doctrine; but this will I say: I believe there never was a child born into this world, if taken in its infancy and placed under proper training, that could not be controlled without corporal punishment.

Gentleness and kindness of heart are inherent traits that may be developed in all the human race, and let all teachers, kindergartners and others remember:

"That a temper once spoiled distills hate—bitter hate against the despoiler."

Robert Owen says in his twenty years' experience in a kindergarten school not one child was punished.

This naturally leads the children to the next important principle—truthfulness.

After a study of children and child's nature for a number of years, I make the assertion that for a child to lie is an acquired habit. Children, until they are accused of falsehood, do not know what it is, or not until they fear punishment for some childish misdeed will they seek to hide behind a falsehood.

A lie is always the weapon of a coward.

Warren Hastings tells us that the chief characteristic of many tribes of India was their utter lack of truthfulness, simply because they were cowards and lacked the moral courage to face their misdeeds.

But in this childhood republic of ours, where all are equal and punishment is unknown, there is no need for a falsehood, and children soon learn to despise any semblance of an untruth.

As a natural sequence to gentleness and truthfulness, we find reverence one of the principles of the kindergarten.

It is here, that irrespective of sect or creed, all the little ones are taught to "lift the head and bend the knee" in thankfulness for life and health, and to ask for guidance in work and play. The last two lines of their morning prayer might well be adopted by us all:

"In our work and in our play,
Be Thou with us, O Lord this day."

Children taught in this way are naturally orderly and obedient. There is little effort required on the part of the teacher to secure order.

Do not misunderstand me, I do not mean to say that fifty healthy, active little children of four or five years of age will remain perfectly quiet for two or three hours. Far be it from me to ever desire to witness such infliction of misery, but "love," that great leveler of mankind, soon controls their acts, and nothing which the teacher would not approve is seen in the school room.

The little folks have now had gentleness, neatness, truthfulness, reverence and order impressed upon them by word and example of their instructors; these habits once formed lead to the desired end of all instruction—industry.

The kindergartners will tell you that they aim to develop the mental powers through self-activity.

Let us transpose this into the good old words of Pestalozzi and say: "We learn by doing."

It is just this one precept that we must look to closely if we wish to develop the future man or woman.

A child whose ideas are beginning to develop, surrounded by the gifts of the kindergarten, will naturally make a choice, clearly demonstrating the trend of its whole nature.

Here the artist, the engineer, or even the mechanic of future years, shows his inherent nature. How many people do we find in this world, unhappy and discontented in their vocation, simply because they are not fitted by nature for the work they have taken up.

Watching and developing these traits, helping the child to mature and polish crude ideas, is all the work of the true kindergartner.

Go to any man whose early years were spent in the kindergarten and ask him of his work done there, and you will find that some special feature of it made a lasting impression on his mind, and to some extent had its influence in shaping his future course of life.

I think I hear some one say: "Why go to a kindergarten or any other school? Why not let a boy select some path in life and follow it without education in any other direction?"

No—no—the balance wheel of the engine may be a little heavier in one part of its rim, to carry it over the centre, but if all the weight be

put at that point it destroys the very thing for which it was created, and will always stop on the centre, and could not start without outside assistance.

So would I have it understood with the training of children in the direction of their natural talents.

Educate them into well rounded men and women, but at the same time, like the metal in the balance wheel, let the greater part fall to the point where most needed.

Another important work begun in the kindergarten is the implanting in the child's mind of patriotism and of the recognition of the equal rights of his fellow beings.

Without sacrifice of independence, the child must learn, and is here taught, to respect the rights of every other child, no matter what be his place in the social scale. The circumstances of birth or surroundings give him no preference or advantage over his little neighbor, and he must submit to the same authority.

This is the practical application of the "Golden Rule," as well as the fundamental principle of our form of government. If the public kindergarten system was universally adopted throughout this land, we should hear no more mutterings of socialism and of the discontent fomented by agitators among the poorer classes; poverty, idleness and strikes would be reduced to a minimum.

The laws of our country would be made by upright and fearless legislators for the benefit of the whole people, and executed impartially by an administration above criticism.

Let us suppose that a child has arrived at the age of six years, two of which have been spent in a kindergarten, is he any better fitted to enter the primary grade than his brother, who has been at home, without systematic training?

The one has been taught to listen, to think, to compare, to do, to act in a sympathetic way; the other, while his natural faculties may be just as good, suffers from a lack of this discipline, and, like the untrained trotter, knows not how to do. I have heard a first grade teacher say, often and again, "If I could only keep those children that come from the kindergarten busy, while the untrained scholar is looking for his pencil, wiping his slate, getting ready to start work (you all know the process), the trained one has finished the light task and is asking—what next?"

I will now crave your pardon and give you what have been personal experiences in connection with kindergarten children in a public school during a period of seven years.

In September, 1892, the Baltimore County School Board, at the solicitation of a few interested persons, established a kindergarten in connection with the public school at Sparrow's Point, that hive of industry of the Maryland Steel Company.

The first year the experiment was but a partial success. The people did not take to it, and it was with considerable persuasion that we induced parents to send about thirty children.

It was something new, the children were too small, they could not be taught; besides, it was only a fad. They did not believe in its efficacy. The next year a few more came, better work was done, the parents manifested a little more interest, they visited the room, saw the little ones at their work, and went away satisfied that the teachers were interested in their children, and that in their little minds were being sown only the best of seeds for future growth.

Thus has the first little public school kindergarten in Maryland grown, until, during the past year, we can boast of 157 children guided by four experienced teachers and the pride of the hearts of a hard-working town of four thousand iron-workers.

Now, what has this kindergarten done for the school proper? It has had a very beneficial effect on the morals. I have yet to hear a ten-year-old boy, of kindergarten training, swear. I have never known one to play

truant, and of nearly five hundred who have entered school from the kindergarten, *not one* has been punished for misbehavior. There is no doubt it has raised the mental standard, the children are doing more and better work than ever before, and in all classes where you find kindergarten children, they will be found at the head of the class.

With the little ones trained as these have been—reason, memory, perception, invention, concentration—all developed when the faculties are most impressionable, cannot fail to bring out well-rounded children, fully able and equipped to take up the burden of school life.

Let us hope now that Baltimore County has taken the initiative in this new era of education, our next Legislature will make the kindergarten a part of the school system of Maryland, and that ere another year, we will find them in every county in our State.

In conclusion, let me say one word to those of us who are to receive these tenderly-trained little ones from the nursery of instruction. See to it that we are fit to receive them, and continue their training along the high plane upon which they have started. Let our lives be as pure as we would teach them to be, and as spotless as we would have theirs.

We all remember when we sat on the nursery floor and piled our blocks high, only to knock them down, and the higher the pile the louder we laughed. Who of us to-day can resist stopping in our walk along the road when we hear the woodman's axe to watch the giant oak crash down through its fellows? There is something of curiosity in human nature which impels us to look at the falling of a mighty structure.

Did it ever occur to you that your children might be watching to see you fall? As the pile of blocks to the baby, as the giant oak to you, so do we stand before our children, and let us each and all so build the foundation on which we stand that the tender lives intrusted to our care may not see the structure tumble in ruins, rather behold an enduring structure on whose model they may safely build their lives.

Association of School Commissioners and Examiners of Maryland.

THE ASSOCIATION OF SCHOOL COMMISSIONERS AND EXAMINERS OF MARYLAND held its annual session at the State Normal School Building, in Baltimore, December 7 and 8, 1899, with Hon. John D. Worthington, President, in the chair, and Prof. M. Bates Stephens, Secretary.

The Executive Committee presented the following program, a copy of which had been previously mailed to each member:

PROGRAM.

(1) Kindergarten Methods and Manual Training.

Paper, - - - - - Alexander Chaplain, Easton

DISCUSSION.

Wm. G. Smyth.....	Chestertown.
Dr. J. W. Laughlin.....	Deer Park.
Dr. Robert A. Dodson.....	St. Michaels.
Wm. C. A. Hammel.....	State Normal School.

GENERAL DISCUSSION BY THE ASSOCIATION.

(2) Nature Study in the Public Snhools, for what purpose and to what extent?

Paper, - - - Herbert E. Austin, State Normal School.

DISCUSSION.

Guy L. Stewart.....Maryland Agricultural College.
T. C. Galbreath.....Belair.
D. E. Graves.....Hyattsville.
Dr. James E. Shreeve.....Ellicott City.
Charles F. Kirk.....Iney.
George C. Pearson.....Hagerstown.
Thomas H. Williams.....Salisbury.

GENERAL DISCUSSION BY THE ASSOCIATION.

(3) Should there be a Compulsory Educational Law in Maryland?

Paper, - - - Henry A. Wise, Baltimore.

DISCUSSION.

John E. Edwards.....Cumberland.
Josiah L. Kerr.....Cambridge.
E. R. Zimmerman.....Emmitsburg.
Joseph M. Cushing.....Baltimore.
Walter Record.....Record.
B. F. Lankford.....Princess Anne.
C. W. Humerickhouse.....Williamsport.

GENERAL DISCUSSION BY THE ASSOCIATION.

(4) Hygiene in the construction of School houses and in School man-
agement.

Paper, - - - D. L. Farrar, Westminster.

DISCUSSION.

Dr. A. E. Sudler.....Sudlersville.
Dr. W. D. Straughn.....Snow Hill.
Dr. N. A. Royn.....Bowie.
Z. C. Ebaugh.....Towson.
Dr. Wm. Keindollar.....Taneytown.
Robert J. DeBarril.....Drum Point.
Thomas M. Carpenter.....Wicomico.

GENERAL DISCUSSION BY THE ASSOCIATION.

(5) The State Teachers' Association—its proper functions and its needs.

Paper, - - - Edwin Hebden, Baltimore.

DISCUSSION.

M. Bates Stephens.....Denton.
E. L. Boblitz.....Frederick.
Reister Russell.....Reisterstown.
George W. Joy.....Leonardtown.
Duncan Sinclair.....Midlothian.
F. Eugene Wathen.....Annapolis.
Louis L. Beatty.....Centreville.
Dr. J. C. Nicholson.....Baltimore.
George Biddle.....Elkton.
Z. P. Wharton.....Stockton.

GENERAL DISCUSSION BY THE ASSOCIATION.

(6) Proposed School Legislation.

Call of the Counties by the President.

General Discussion by the Association.

(7) Inspection of the State Normal School December 8th, at one
o'clock P. M.

(8) Luncheon, December 8th, at two o'clock P. M.

The minutes of the proceedings, as recorded by the Secretary, are as follows:

STATE NORMAL SCHOOL BUILDING,

BALTIMORE, MD., December 7, 1899.

The Association of School Commissioners and Examiners of the State met in annual convention with John D. Worthington, of Harford County, as Chairman. The President ordered a roll call of the counties, many of which appeared to be without representation. Minutes of last session of previous meeting were read and approved.

Mr. Worthington on assuming the duties of Chairman, extended a hearty welcome to those present, and expressed his thanks for the honor conferred on him at the last meeting in selecting him President of the Association. He then gave an earnest and valuable talk on the history of Public Education in Maryland, and traced the progress of free education from the time when its pupils were but a mere handful, until now the children of school age who do not avail themselves of public school facilities have been reduced to a very low minimum. The greatest danger now apparent confronting the progress of public education in this State is in the matter of school legislation where it may represent ambitions rather than wise legislators.

The Free Book Bill has a defect which is an omission, in not naming a definite term for which a book should be adopted; a period of three years would be short enough for the life of a text-book.

Hon. E. B. Prettyman, State superintendent, gave a synopsis or summary of the school reports of various counties in the State and Baltimore city, which showed an increase in essential items and showing steady growth in all departments of the system, especially in higher grade studies of our schools. In one essential item there was a decrease of 6,671 in the enrollment of pupils. Prof. Henry A. Wise thought there was an inconsistency in a decreased enrollment and an increase in maintaining the schools. Mr. Nichols, of Talbot county, lamented the fact that county school boards should be required to maintain schools, and especially the colored schools, the full scholastic year where the attendance is so small as to make it a useless expenditure of money for several weeks of the fall term, and possibly the summer term also.

Henry A. Wise, superintendent of Baltimore city schools, made a pointed address on "Should there be a compulsory educational law in Maryland?" taking the ground that the hope of the nation, both in peace and war, lies in public school work, which supplies essential knowledge and skill requisite for life's emergencies. The failure of many States to make the law effective makes it important for the State to go slow in adopting a law until one can be adopted involving the least possible cost and

friction. The reform, which has been inaugurated in more than thirty States, is one which will reach Maryland, as it is in line of educational progress, but may be delayed for a short time while there is going on a serious consideration of what sort of a compulsory educational law will best meet our conditions.

The question was discussed by John E. Edwards, who indorsed the ideas expressed by Mr. Wise. He thought a law should be adopted, mild in its scope. Mr. Kerr, of Dorchester county, spoke in favor of the law on the ground that the State has a right to expect something from its citizens in the way of becoming educated. Further remarks were made by E. R. Zimmerman, Walter Record, H. G. Weimer, George Biddle. Prof. Austin, of the Maryland State Normal School read an excellent paper on "Nature Study in the Public Schools, for What Purpose and to What Extent?" The paper was discussed by Institute Conductor of Farmers' Institute W. L. Amoss, Captain Sylvester, President Maryland Agricultural College, both of whom plead for more attention along the line of nature studies in the public schools, and felt gratified that the county institutes had asked for instructors on the subject from the Agricultural College. These requests had been complied with, and members of the Faculty have attended these county institutions. The paper was further discussed by Dr. Prettyman, F. C. Galbreath, Dr. Shreeve, George C. Pearson, Mr. Gould; Prof. Chaplain. The next feature of the program was an able paper by Prof. Alexander Chaplain, Examiner of Talbot county, on "Kindergarten Methods and Manual Training." He regarded the subject as the leading question of the day in our new education, and the time had come when we must give Paidology and Psychology that place in our system of education, and that study in our agencies for the teachers' equipment which their importance requires. The paper was discussed by Dr. Dobson, and Mr. Smyth.

On motion it was decided to ask Prof. Chaplain to finish his paper to-morrow.

On motion it was decided to ask Prof. Chaplain to hand his paper to Secretary to Board of Education.

Adjourned to meet tomorrow at 9.30 o'clock.

M. B. STEPHENS, *Secretary.*

NORMAL SCHOOL BUILDING,

BALTIMORE CITY, *December 9, 1899.*

The Association met at 10 o'clock, President Worthington in the chair. Minutes of previous session were read, corrected and ordered to be recorded. On motion, the Chairman appointed Prof. McCahan and George Biddle to examine the accounts of the treasurer, Mr. Pearson. Prof. Chaplain resumed the reading of his paper on kindergarten methods and manual training.

The paper was discussed by Mr. Wathen, of Anne Arundel, and Prof. Prettyman. Mr. Wathen made the motion that this association endorse the act of Assembly making appropriations for manual training schools, and ask, through our legislative committee, that the appropriation be continued. Motion carried.

"Hygiene in the construction of school-houses and in school management" was the subject of an exhaustive paper by Examiner D. L. Farrar, of Carroll county. A well-drained and well-located lot is the first consideration of a School Board in building a new school house. Light and ventilation are the next considerations; a thermometer ought to be provided. The ordinary method of heating, using the cheap stove, is a mistake, and a modern heating apparatus, by which heat is evenly distributed over the room, should be provided. Cleanliness should be taught as an essential of life, vaccine laws should be enforced, etc. The paper was discussed by Dr. A. E. Sudler of Queen Anne's county, Dr. W. D. Straughn of Worcester county, H. A. McComas of Washington county, Dr. Dobson, Mr. De Barril of Calvert county.

An opportunity was given to enroll members of the association.

Auditing committee, through Mr. Biddle, reported on account of Treasurer Pearson, which was found correct and proper vouchers for all items of expenditure. Prof. Edwin Hebden read an excellent paper on "The State Teachers' Association, its proper functions and its needs." The paper was discussed by M. B. Stephens, of Caroline county; E. L. Boblitz, of Frederick county; George M. Joy, of St. Mary's county; Mr. Eugene Wathen, of Annapolis; L. L. Beatty, of Queen Anne's county, and Dr. Prettyman. The chairman, announced the following legislative committee, to take in hand such legislation as this association may ask for our schools: M. B. Stephens, chairman, Caroline county; W. H. Shepard, Cumberland; Dewees, L. Farrar, Westminster; George M. Joy, of St. Mary's county; Dr. R. A. Dodson, of Talbot county.

Dr. Prettyman moved that the counties correspond with legislative committees instead of roll-call of counties. The association accepted invitation to attend Normal School exercises at 1.30 o'clock. The association adjourned *sine die*.

M. B. STEPHENS,
Secretary.

The following papers by Professors Farrar and Hebden are the only papers which have reached this office of those read at the session of the last Association of Commissioners and Examiners of Maryland and requested for publication in this report:

Hygiene in the Construction of School Houses and in School Management.

BY PROF. D. L. FARRAR, OF WESTMINSTER, MD.

In the consideration of the dual subject assigned me, I have endeavored to discover some of those hygienic principles of school architecture which should be observed in the construction of county school houses, and furnishing them, and also those essential healthful matters in school management within the province of the teacher to control.

LOCATION.

The first matter to be considered is the location. Is it not true that school houses have been located in low, marshy, miry places where the pupils and teachers are obliged to walk through deep mud and mire six months in the year simply because someone gave this good for nothing bog for a school site, when a good, well drained site might have been purchased for a trifle? Is it not true that some school sites in rural towns are located in alleys in close proximity to stables, hog pens and the like, and at a considerable distance from a pure water supply? Is it not true that some school sites are mere patches of ground, so small in fact, that the outbuildings must be located within a few feet of the school house, and that children are obliged to play in the road? Under these conditions is it possible to rear healthy boys and girls? Is not the surrounding atmosphere impregnated with disease germs which may sooner or later effect the health of those who breathe it? I know that some may plead excuse for such sites on the ground of economy. I grant that it may be economy of a *monetary* nature, or possibly *political* economy, but it is not *hygienic* economy. Healthful conditions call for a well drained lot of at least a half acre, where the children may exercise and play games out of school hours and where the surroundings cannot pollute the air. The child's natural activities require room for their development, physically as well as mentally. The importance of a healthful, roomy site cannot be over-estimated.

CONSTRUCTION.

Many of our school houses seem to have been erected with the sole idea of shelter, with never a thought for the hygienic welfare of pupil or teacher. In the construction of a school house, ventilating, seating of pupils, arrangement of windows, provisions for water pail, wash basin, etc., must be carefully considered to secure healthful conditions.

HEATING AND VENTILATING.

Scientists tell us that a child requires at least 200 cubic feet of pure air, and this must be continually changing, so that the child may constantly and continuously have a supply of fresh air aggregating from 650 to 700 cubic feet per hour. This pure air should be supplied at a temperature of from 68 to 70 degrees, so that the pupil and teacher may be comfortable. Hence, a thermometer is absolutely a school-room necessity. The question as to how this supply of pure air can be made continuous and automatic has been the study and experiment of school men for many years, resulting in very satisfactory systems; yet I would hesitate to say that perfection has yet been reached, even in the construction of our modern urban school palaces where the wealth of rich municipalities has been placed at the disposal of the architects. It seems to me that any efficient system for furnishing this supply should heat the cold air just before, or as it enters the school room, and that the ordinary plan of heating with stoves in the room is erroneous as applied to crowded school rooms. I admit the latter to be the least expensive, but getting something for nothing is not the recognized code of either God or man. The recent English regulations for warming a school room say, "A common stove can under no circumstances be allowed. Stoves are improved only,

(1) when provided with proper chimneys, as in the case of open fires; (2) when of such a pattern that they cannot become red-hot or otherwise contaminate the air; (3) when supplied with fresh air direct from the outside by a flue of not less than 72 inches superficial, and (4) when not of such a size or shape as to interfere with the floor space for teaching purposes." These conditions applied to our county schools would place most of the stoves out of doors. If all school houses were provided with cellars in which fuel, broken furniture, etc., could be placed, would it not be economy in the end, and admit of much better heating and ventilating, besides avoiding the necessity of having the middle aisle of the room obstructed by the stove, which usually roasts the pupils sitting next to it, while those in the distant parts of the room are freezing? In many narrow houses the desks of the outer rows are placed against the walls in order to get the center rows far enough from the stove to avoid the roasting process, thus necessitating the sitting of at least one-fourth the pupils immediately against the walls, usually somewhat damp, which conditions I conceive to be highly unhygienic. I will suggest a plain and comparatively inexpensive plan. The heater is placed in the cellar and is furnished with a constant supply of fresh air from the outside by a cold air flue. This heated fresh air should pass to the room above through vertical registers placed in the wall, near the floor line at the rear of the teachers' desk at some distance apart. The floor register is objected to on account of the accumulation of dirt and dust which naturally falls through the openings when sweeping and when walked over, and also on account of the tendency of children to stand directly over them. The ventilating register should be placed in the wall near the floor line. The ventilating flue could be built up in the same stack with the smoke flue. A small hot-air pipe should be connected with the lower end of ventilating flue to create a more-rapid circulation. A second ventilator placed in the wall near the ceiling, which could be opened and shut occasionally, if required, would probably be an advantage. What we need is to get an abundance of fresh air charged with oxygen and to get rid of foul, stagnant air impregnated with carbolic acid gas. The ways and means form food for much discussion.

DESKS.

Each pupil should have a single adjustable desk, which should be his alone during the school year. Go into most any schoolroom in the country which has the old double-desk seating and you will see some children sitting day in and day out with no support for the feet, the desks being too high. You will see others who don't seem to have any place for their feet, the desks being too low. You will see pupils sitting together, the one a coarse, dirty boy, who possibly shows signs of skin or blood disease; the other a clean, healthy boy, well cared for, to whom the danger of close contact with his seat-mate is unknown. Independent seating is much preferable, not merely from the hygienic view, but from the view of school government, as there is not that tendency to get into mischief. The desk top should have a slant of say twenty degrees, if rigid, as this is an average of different slants needed by the various kinds of work the pupil has to perform. This will give the pupil's arm a much easier position when writing than a flat or nearly flat desk, and enable the pupil to sit in a more natural position. If this top could also be made adjustable so as to get a greater or less angle of elevation, according to the needs of the pupil, it would be more healthful.

LIGHTING.

I think the light should enter the room from both sides and not from the back, but not from the front. A massing of the windows in the center of each side will give extra room on the walls for maps, charts or blackboards. If blackboards occupy the rear wall light can be admitted from above them. In no case should a glare of light be allowed to fall upon the desk at which a pupil is studying. Shades should roll from the bottom

upward in order to shut out the lower light first if necessary. If the direct rays of the sun enter at a given point, a white muslin curtain should be used merely to soften the rays. Walls painted with pearl or brown shades are much preferable to whitewashed walls, and green chalk-boards preferable to black, as these neutral colors relieve the strain on the optic nerves, occasioned by too decided contrasts in colors.

IMPROVING OLD HOUSES.

What can be done to better ventilate the little red brick house which was only built for shelter, with the stove in the middle of the room? Ventilation can be secured for such a schoolroom by lowering the sash from the top if the windows happen to be hung with cord and weights. However great, care should be exercised with open window ventilation, as a blast of cold air is often more injurious than imperfect ventilation, by producing colds, catarrh, pneumonia, earache, neuralgia, etc. A better plan is to take a board, which is three or four inches wide and as long as the sash is wide, and place it under the lower sash, which will admit the fresh air between the sashes without a draft on the pupils, and thus keep up a certain amount of the necessary circulation. To help in this matter, a trap door can be cut in the ceiling, to be opened and shut by a cord as needed. Every house should be provided with a sink for the water pail, wash basin and soap, with a waste pipe emptying outside. This will save much slop and filth. Shoe scrapers should be placed at the door and *used*, so as to keep all dirt possible outside.

CLEANLINESS OF CHILDREN.

Cleanliness of the children has much to do with the purity of school-room air; hence the teacher should insist that his pupils keep clean. Scientists have made some very interesting experiments to ascertain the facts as to the number of micro-organisms in the air of schoolrooms of various degrees of cleanliness. It has been found that in a schoolroom occupied by clean children, as compared with one occupied by dirty children, the micro-organisms were in the proportion of 63 to 159. If on entering a schoolroom there is a perceptible "closeness" or a bad odor the air is foul, and the room should be flushed or flooded with pure air by opening the door or windows, while the pupils stand and perform light Calisthenics. This will relieve both pupil and teacher of that weariness, dullness, drowsiness and nervousness so noticeable and impart new life to schoolwork, besides rendering discipline much easier. This "closeness" is not due entirely to bad ventilation, but is often due to gaseous filth, to filthy, unwashed children, to dirty clothing, and to dust and dirt on the schoolroom floor. The teacher should not tolerate dirty hands, faces and heads. Of course dirty clothing and bodies cannot be wholly controlled by the teacher, but cleanliness can be, and should be taught as one of the essentials in life.

OTHER PRACTICAL HYGIENIC MATTERS.

Nor would I have other practical hygienic matters of school life neglected. I would not allow pupils to run out into the cold without putting on hats and wraps. I would not allow the pupil to bolt his dinner that he might get a few more minutes for play. I would have practical hygiene taught not only from the text-book, but by taking for lessons the headings often seen in the daily papers, such as "Killed by Trichina," "Died of Copper Poison," etc., and by correcting the pupils natural tendency to do unhygienic things. The vaccination laws should be enforced. Teachers should be careful that the water which the school uses is pure and wholesome. If there is any doubt a sample should be sent for analysis. The best time for recess would seem to be when the session is about two-thirds over, as the pupil can endure more restraint before than after recess. I would dismiss the first and second grades at 2.30 or 3.00 P. M., and would not hold them in school for more than one hour without a short recess.

HYGENIC WORK FOR THE PUPIL.

Nature has provided that the pupil during the day shall be active incessantly, mentally as well as physically. The child is endowed with instincts which lead him to seek pleasure in those activities which are so easily seen in child life, which nourish and develop the brain and muscle. Whether in school or out of school the healthy child is active. These activities should be guided and directed by the teacher, so as to develop and not dwarf the physical and mental child powers. A constant change of stimuli is thought by physiologists to be best, and consequently no recitation should be continued long enough to weary the child, so as to arrest the natural growth of his activities. The appropriate food for child growth should be provided by changing from one line of thought to another, and such studies prescribed in our courses of study as shall lead the pupil step by step to the desired end, viz: A healthy and cultured being with a sound mind in a sound body. The natural interest of pupils should have an important place in the consideration of the course of study and this should be as a safety valve in guarding against overtaxing the child. Hence I would be careful about prescribing much book study for the first and second grades. Most of the instructions given these grades should be oral, illustrated by the free use of chalk. A child of six or seven is long sighted and should not be required to examine too long and critically printed forms. If he is so required some defect or defects of vision are sure to be developed. It has been demonstrated that a child's activities are gradually developed from the large and coarse to the more delicate and refined activities, and all school work should be laid out with care not to violate these fundamental principles of child growth. Small children should not be kept at writing for more than ten minutes at a time, as the double strain on the eye and hand muscles, which the brain must guide in harmony and unity during such exercises, is quite severe with them. You will notice the effects of this double strain on the whole body after the child has been writing a few minutes. The slant system of writing necessitates a twisted position, which tends to producing lateral curvature of the spine, particularly in the case of rapidly growing children. Vertical writing requires a more natural position and I believe its general introduction during the last few years has been a long step forward hygienically. Pupils should not be required to toe a floor line, to sit motionless in their seats or to perform regular exacting activity for any considerable length of time for fear of overtaxing the muscles. I have seen teachers require little folks to toe a floor line for fifteen or twenty minutes while each of a long class drawled through the reading lessons in a listless way, which indicated no interest whatever and very little understanding of what was said. This is all wrong. School rooms should have recitation seats, with backs, not benches. The teacher had better have one-half the quantity read and the proper questioning and explanation to bring *out* the meaning of the text, thereby stimulating a healthy interest in the recitation and rendering the reading lesson a pleasure. The idea of *tasks* should be eliminated so far as possible from school life.

SELF-GOVERNMENT.

In all our school work we should provide for the greatest freedom possible consistent with a well-governed and industrious school. Self-governing should be taught quite largely in every school by the adoption of a system of granting privileges whereby the pupil is allowed to do certain things without asking his teacher, so long as he does not abuse these privileges. The pupils are free under this system from that restraint which so retards and dwarfs a child's development. The plan requires watchfulness on the teacher's part, but I think it pays, not only by saving the nervous energy of the teacher, but by its hygienic influence on childhood. It puts the children on their honor, encourages right-doing, manly and lady-like conduct, and relieves them of the feeling that they are only a school slave.

IN CONCLUSION.

Would not better hygienic constructions and furnishings result if the State Board was required by law to issue a list of drawings and specifications of school houses, costing from \$500 upward, embracing the best-known practical and economic hygienic features for the use of the various School Boards in selecting those suited to their necessities? Would not better hygienic management of schools prevail if trustees and patrons would take more interest in the healthful needs of their schools and advise with their teacher about these matters of such vital importance?

"The State Teachers' Association—Its Proper Functions and Its Needs."

BY PROF. EDWIN HEBDEN, OF BALTIMORE, MD.

That the teacher makes the school is now accepted as a fundamental truth by all who make a study of the history of education and educational processes. Although this statement, when made before this body of educators, may seem somewhat of a platitude, nevertheless, for the development of my theme I must set forth not only the proposition itself, but also its corollary—to improve the school the teacher must be made more efficient.

The best school system imaginable, supplemented by a perfectly-balanced curriculum, will fail of its purpose in the hands of the weak or incompetent teacher. On the other hand, the real teacher will produce great good, and engender individuality and creative power in his pupils, even under the most adverse circumstances.

Dr. Russell, dean of the Teachers' College of the Columbia University, in a recent public discourse, declared that "public education—that is, the education of the masses by the State—is the greatest experiment that has ever been tried during all historic time, and it is still in the experimental state." Public education, or rather let me say modern education, whether in public or private institutions, has not yet, and is not now, accomplishing all, nor *nearly* all, that is rightly expected of it, and very much less than what was hoped for. Not only are its short-comings negative in character, but an appreciable quantum of positive injury is undoubtedly present. From all sides come complaints of its failure to develop and lead forth our boys and girls into men and women able in themselves, prepared to do such work as economic and social conditions demand, fitted to live for the best interest of themselves and to the benefit of the community. The columns of the press, the pages of the magazines, teem with such charges.

We must not aver that this is pessimism, that the great benefit which has accrued from and the marked progression and advancement of modern nations by reason of more common education are not also cried out. This latter is recognized and accepted, but it is human nature to accept the good as a thing of course, while the bad alone receives its loud denunciation, and, although many of these complaints have doubtlessly been made without full investigation as to the real causes, and many of these charges have been based upon slight foundations, still the conditions giving rise to such complaints exists to-day as they have always existed, but of less extent.

It is wrong and unscientific not to recognize this state of affairs, and to refuse to take advantage of whatever points out weak places in our work. These charges are not disproved by inveighing against their makers as chronic grumblers and fault-finders. Honest criticism should be welcomed. It is not antagonistic, and by recognition, when just, it can be converted into powerful co-operation, tending to produce and obtain efficient remedial agencies.

The scientist evolves and elaborates his theory after profound and careful deliberation. He constructs and adjusts his apparatus more or less perfectly as he may be able, yet often absolute failure or but partial success is the result. The scrap-heap at Edison's laboratory contains hundreds of tons of most carefully constructed apparatus, at once the evidence of numerous failures and a monument to his success. To the real worker failure is but the preparation for further effort. There is no blame, no censure, no abandonment of theory except as shown to be imperfect. There remains for him a theory to be strengthened, a problem to be solved or a solution to be perfected. Further study and investigation is needed, and every criticism, every suggestion is applied in search of fallacies and to overcome weaknesses and all the elements entering thereinto.

There is no feeling of blame or censure for the great army of faithful, earnest, conscientious men and women engaged in the work of teaching in the statement. I believe the chief cause of and the most important element entering into the unsatisfactory results from public education is *the teacher*, and he who here makes this statement is himself a public school teacher. That other and potent forces have been, are and will continue to be, factors thereof we all know. It is not the purpose of this paper to discuss *them*. Since, however, the teacher is the greatest factor, not only entering into the success or failure of "the great experiment," but also in determining the character of the work done and the means for further progress, he deserves and should receive the greatest possible assistance, tending to enable him to increase his efficiency in his work.

A careful study as to the requirements necessary to the competent teacher reveals that, in addition to high moral and physical qualifications, he should be equipped with a broad academic education, supplemented by a thorough course in at least one branch of science. He should have special professional training preparatory to the work of teaching. He must be able to *comprehend his work*, which is meant to include ability not only to instruct the child, but also to cultivate, rear and mature his powers; ability to investigate his own work, to observe and differentiate results, to discriminate, to originate; in a word, to make the schoolroom his scientific pedagogical laboratory. He must have tact, a knowledge of the nature of children, and, most requisite of all, unbounded and loving sympathy. The lack of any of these requirements lessens by so much his competency and weakens his power as a teacher.

We all know that the present teacher does not measure up to this ideal. "Well, what are you going to do about it?" Turn him out? Will his successor, *under present conditions*, be any better, or as good, even? Is there a stock of trained doctors of the Science of Teaching to draw from? None. Then the best to be done, and it becomes imperative, therefore, is to make the teacher of today as much a real teacher as possible. The duty is mutual—teacher, school officials, the State—all are concerned; and over and above all, the child,

I take it as axiomatic that he who is without high moral character and good bodily health is thereby disqualified from becoming a teacher.

It is incumbent upon him who knocks at the door of the school to bring with him a broad culture and strongly-developed mental powers.

Of professional training there is but little which can be accepted as such. This is necessarily true, for the days of Ichabod Crane are as but yesterday—indeed, the *schoolmaster* is still abroad in the land and must abide with us until sufficient scientific investigation shall have been made to give us the foundation to build upon. If we examine the history of public education we find that there has been but little real work in this field. A sporadic effort, or a fad heralded—a bubble burst. Careful and critical study of the work of teaching has never been general, and is still limited to the very few. The field covered has been too circumscribed, the investigation has not been sufficiently broad or continuing to establish well-recognized precedents or general laws. Some few have studied a child, or, at most, a few

children under conditions largely abnormal, having been made in most cases by the investigator himself. Froebel and Pestalozzi have rendered themselves immortal by endowing the child with a soul and their work of humanizing the schoolmaster. Herbert Spencer and Compayré have given him a philosophy by means of which he may construct theories worthy of the most careful consideration and application. These have given us something and of great worth, but their fields were limited, or they pursued and explored some special path, or their environments were narrow and peculiar to their specially-created and not general conditions. It has only been within the last few years that the work of educating the masses has received broad and systematic attention and study in such associations as our National Educational Association, and by such men as G. Stanley Hall, J. M. Rice, Superintendent Philbrick, and a few others. Even these were and are hampered by the need of more complete and more satisfactory data, which can only be obtained in the school room and from the school teacher—not one but many, very many.

I have stated that he who would enter this profession in the future should bring with him sufficient and thorough academic knowledge, and the standard should be made high enough to be fully protective without being prohibitive. To the teacher more than to any other does this apply. But this is the function of the college.

It has too often happened that he who has failed elsewhere has found a haven of refuge at the head of the school room. Quacks and demagogues have always existed and have thrust their way into all professions. It was, in part, to protect themselves against these parasites that special training and preparatory schools were instituted, and certificated proficiency in the fundamentals necessary as an equipment for the actual work in the profession was made obligatory upon those who would enter into its practice.

I hope to see the day when the Normal School shall have grown into a School of Teaching, a purely professional school, founded on a basis and doing work that shall place it in the same category as the Schools of Medicine, Law, History, and all other schools now embraced in and forming integral parts of "The University." The time is ripening, our needs demand it, and the work of our National Educational Association, augmented and supplemented by such work as we shall endeavor to accomplish in our reconstructed State Educational Association and others, will make it possible.

But even if such a professional school were established it could not give all that is required. Are you willing to entrust the entire and final treatment of your seriously ill and suffering child to the newly graduated physician? The young bachelor-at-law, fresh from his moot court, must, indeed, become the wise and learned judge who will decide your rights and privileges, but only after years of deeper study and careful, critical and wide observation of his own experience as well as that of his brothers in the profession.

The teacher who shall in the future be worthy of the name can become prepared and skilled in his profession only in a similar manner. His professional apprenticeship and preliminary training should be had, not in the school room where its acquisition at best must be slow, in haphazard manner, and at the expense of the mental dwarfing of multitudes of pupils, but in the school of teaching. Skill and wisdom in his profession must come very largely from association and interchange of professional investigation and experience with his fellows. The teacher of the present *must* prepare the way and *should* make the journey himself as far as it may be. He alone can and must provide the means, the data whereby the next and succeeding generations may approach nearly and more nearly to the perfect teacher. They must build upon his work and attain success by reason of his failure. If, however, we of today make no study of our work nor leave any record thereof, we deprive the State of the greatest

benefit and deny to posterity its rightful inheritance. Herein lie the two most important professional functions of Teachers' Associations at the present time

It is the function of the State Teachers' Association to bring before all the teachers in the State, through the investigation and instrumentality of committees selected for their fitness, conditions, methods, processes now existing their effects good or bad; the character of our work and its relation to the pupil and to the community, whether it conduces to give him creative power as well as to strengthen his receptive and reproductive faculties; to bring together this vast body of workers and make out of a heterogeneous conglomeration a harmonious whole; to engender professional spirit—that self-consciousness which is begotten of active co-operative interest that uplifts and dignifies both the individual and the entire body. It is the function of the State Teachers' Association to contribute to other similar organizations, through publication of minutes and reports of committees, all trustworthy data collected and all well-founded conclusions, thereby broadening the field of research and at the same time giving our best efforts to the common cause; especially is it incumbent upon every such local association to co-operate with and enter into the work of the National Educational Association, and it would be wise and of great service to send capable delegates to this great central body, where data from all sections could be studied, conditions examined and needs intelligently determined, for it is my conviction that we must give to our American boys and girls that peculiar education which is the outgrowth of our republican institutions and which is absolutely necessary for their perpetuation. *American education is necessary to the American Republic*, and what shall constitute this can be best determined from a study of all that pertains to the *whole* country. This can only be accomplished when *all parts* of the country bring together their best efforts and wisest judgment.

It is the function of the State Teachers' Association to give all possible assistance and recognition to the county associations, inviting and seeking their aid, thereby obtaining through their delegates (if in any way these may be provided for) the actual detail of work and conditions in all parts of the State.

It is the function of the State Teachers' Association at the present time to offer to all its members by means of special lectures or otherwise, a broader view and knowledge of natural science, mathematics, history and other branches of study than the opportunities of the great majority of us have afforded. It is right that the teacher shall be kept in touch with the results of modern investigation and thought. The well-digested and carefully-arranged lecture of the special workers in their several departments, in connection with selected, pertinent illustrations will condense into an hour the hard word of many months, and in this brief time there will be given an increased appreciation of such subject and an increased power therein in our work in the school room. Since the zones of influence and work of school teachers and school officials overlap and run together, it is the function of the State Teachers' Association to make such provision as will secure the active interest and participation of school officials and all others in any way connected with the work of education, and to give in return the results of trial and experience and so aid in intelligent and comprehensive school supervision and legislation. This union of interests enlarges the scope of a teachers' association and merges it into a State Educational Association—its proper and natural sphere.

It is not only its function, but also an imperative duty to do all this in the most interesting, instructive and pleasing manner, that by its attractiveness, as well as for any other reason, the attendance and active participation of the greatest number may be secured, and the greatest amount of good accomplished—this on the same principle that it is eminently proper and right to make the work of the school a pleasure and a happiness to the pupil.

There is a place and a welcome here even for the much-abused book-agent. Here, indeed, should his wares be considered and criticised by those committees or persons having their subjects under consideration. Books! those best of servants and worst of masters! How much good; yet, how much harm they have done? At no other place can school appliances be exhibited and the opportunity afforded to present their claims to so great advantage to all concerned, and provision should be made to this end.

While it is right and beneficial to relieve and vary its proceedings with pleasing, entertaining and refined social functions, it is neither the duty nor the privilege of an educational association to make amusement or mere pleasure a leading incentive to attract numbers to its meetings. Such a course changes its entire character. When the educational is subordinated to the social function, it either becomes perfunctory or is lost sight of entirely. The foundation is destroyed and the structure falls in ruins. As well make the school a place for the pupils to have fun.

It is the purpose of the Maryland State Teachers' Association to strive towards this reality of work, and to that end a plan of reorganization is now in preparation. In order, however, that it may be even partly successful, it has three great needs—recognition, encouragement, aid.

Recognition—official recognition by the State as an integral part of its educational system, official recognition by county and municipal school boards by making such provision that their respective teachers' associations as well as their own body shall be fully represented by delegates to the association and by referring to its committees interrogatories and matters requiring professional investigation and opinion. Recognition by the teachers themselves, as a place to which each may bring the results of his observation in his own limited surroundings, with the assurance that they will be used according to their *reality* and merit; as a place where he may get not only similar contributions from his co-workers, thereby enlarging his range of vision, but also the carefully studied and well-digested conclusions based on special study of all such data from committees appointed for their special fitness to consider the matters referred to them.

Encouragement—of State and school officials by giving to the reports of our committees and their conclusions concerning professional matters due respect and weight according to their merits; by honoring and rewarding with such preferments and emoluments as may be those who, by their work in connection with the association, strive to advance the work of education; and by denying official favor and countenance to those who do not endeavor to improve either their own work or the work of others. Encouragement from the press by resonable notice in its columns of our proceedings, acts, reports, accompanied by just and kind criticism, whether favorable or adverse, all tending to give us such standing and repute in the community as we may merit.

Aid—by advice, counsel, judgment from other spheres of activity. And most necessary to make our broader work possible and effective, we need financial aid.

The small salaries of teachers do not enable them to provide for the necessary working expenses of the association and its committees, the printing of circulars, proceedings and reports of committees, so as to have them in usable form. We cannot hope to obtain our ends without assistance in the shape of a small annual appropriation. We shall pray the State to give us this aid, and we earnestly seek your kind offices to that end.

CONCLUSION.

The approach of the next Session of the General Assembly of Maryland of January, 1900, has doubtless caused many thoughtful members to examine the Public School System of the State, with the view of suggesting amendments for its improvement. It is to be expected that, as in the past, a conservative spirit will prevail. Among those who are best acquainted with the School Law and its actual operation throughout the State, it is held that in its general features the system is a good one, and well adapted to the needs of the public. It brings within the reach of every child the opportunity of obtaining the elements of a good, practical education, and opens the door to the widest field for higher education. We are fortunate in having within the limits of our own State educational institutions that afford facilities unsurpassed elsewhere.

It will be remembered that our Public School System is the result of a gradual development through many years of thoughtful and able fostering in the light of the experience of our own and of our sister States. Improvements have usually been inaugurated by discussions among the school officers and teachers of the State, and accomplished by the respectful presentation of the conclusions so attained to the General Assembly through its committees. It has always been found that courteous attention and careful consideration have been given to such suggestions, and that the members of our Legislature have been willing to join in securing the benefit of whatever, in their wisdom, has been deemed for the public good. Committees of the Boards and Associations, composed of those actively engaged in public education, have been appointed, and will, in due time, wait upon the committees of the General Assembly.

From the sources of information of the State Board of Education it is believed that the public schools throughout the State continue to be well conducted, to be increasing in their good results, and to merit and receive the cordial good will and approbation of the public. Teachers' Institutes have been held in all the counties with good effect, and the appointment of a State Institute Conductor, under provision of law, has proved to be wise and beneficial.

The catalogue of the Maryland State Normal School shows the usual attendance from every county of the State and from Baltimore City, and its condition is best set forth by the following report, which was unanimously adopted by the State Board of Education, all its members being present, and ordered to be entered on its Journal of Proceedings:

"BALTIMORE, May 29th, 1899.

"The committee appointed to visit and inspect the State Normal School and to examine into its methods of teaching and

into the general discipline and conduct of the school, begs leave to report that two of its members (undersigned) visited the school and examined thoroughly into its general conduct and discipline and into the methods of instruction in the various departments.

"The committee was exceedingly pleased with the methods of teaching, with the spirit displayed by the teachers and pupils, and with the superintendence, conduct and discipline. The committee confidently reports that the school, as conducted, merits the approval of the State Board of Education. One of the members of the committee was prevented by urgent business from accompanying the other members.

(Signed)

"JOSEPH M. CUSHING,
Chairman.

"J. C. NICHOLSON."

Whilst the Public School System in its general provisions is worthy of the high esteem in which it is held, yet it is believed that it may be improved in some particulars. The provisions of the statute law, and of the State By-Laws, enacted by authority of the law by the State Board of Education, make it possible for all the industrious and progressive teachers of good moral character to win for themselves professional certificates, good in any part of the State, and for life. It has thus been rendered possible for teaching in this State gradually to become, in fact, a profession. The laws should be so framed as to ensure to teachers who avail themselves of the opportunities above referred to a reasonable certainty of continued employment and promotion according to merit, and thus open up a safe career for lifework in the profession. The power of appointment of teachers, lodged in the District School Trustees, is limited to those who have obtained teachers' certificates as provided by existing law, and subject to the approval of the Board of County School Commissioners, but the power of *removal* of teachers is absolutely unlimited. Teachers may be removed by the Trustees, upon thirty days' notice, without assigning any cause, and no appeal is provided from such action. Such removals are, in fact, often made. This power is greater than that possessed by any other authority under the constitution and laws of the State, and should be altered by proper amendment. The high character, personal and professional, of our teachers, and the great importance and value of their services, cry aloud against their removal except for cause shown, and in favor of their right of appeal to the Board of County School Commissioners, and their right to be heard in defense.

It is gratifying that the number and efficiency of the high schools continued to increase. There should be a well equipped high school within reach of all who have completed the grammar school course, and existing laws amply provide therefor,

either as a county high school or a district high school. Local enterprise must aid the school officers in the establishment of the latter, but wherever such public spirit exists, the school officers will doubtless perform their duty in this regard.

The General Assembly of 1898 enacted in the General Appropriation Bill the following clause, viz: "For the erection of a building at Frostburg, Allegany County, to be known as State Normal School No. 2, the sum of twenty thousand dollars, and for the support of said school, when established, five thousand dollars annually; provided, that the people of the town of Frostburg furnish the ground for the site of said building, and deed the same to the State."

The authorities of the town of Frostburg petitioned the State Board of Education to cause said building to be erected, and said Board referred the matter to the Treasury Department of the State. The treasury officers, after consulting the Attorney-General, decided to pay over the sums of money, so appropriated, to the State Board of Education, for the purpose indicated, and the twenty thousand dollars has been paid to the said Board. The town of Frostburg furnished the ground for the site of said building, the site having been selected as appropriate and suitable by the State Board of Education from a number of lots offered, and it has been deeded to the State. The said Board has contracted for the erection, steam heating, plumbing and ventilation of said building. The increase in the cost of building materials rendered it impossible for the Board to secure responsible bids for said building, after twice advertising, within the appropriation; whereupon the County Commissioners of Allegany County offered to furnish the sum of five thousand dollars additional and look to the next General Assembly for reimbursement. The building is under roof, and its completion is expected by March 1st, 1900.

Resolutions passed by the Association of School Commissioners of Maryland and by the State Teachers' Association, at their last meeting, express as the sense of those associations that "as the State debt is decreased, thereby rendering unnecessary part, or the whole, of the State tax to pay said debt, the State School tax should be proportionally increased." It is universally desired by the school officers and the teachers that thus, without increasing the rate of the State tax, it may be possible for the school officers to increase the salaries of the teachers. It is acknowledged by all who voice public sentiment that teachers' salaries are inadequate, and it is earnestly hoped that the General Assembly will furnish the additional State aid indicated.

The same associations have also passed resolutions in favor of endeavoring to secure such action by the Congress of the United States as will result in the payment to the State of Maryland of its just and equitable share of the proceeds of the public lands for the benefit of public education in Maryland.

The General Assembly of Maryland in 1821 adopted an elaborate report, concluding with the following resolutions:

(1) *Resolved*, by the General Assembly of Maryland, That each of the United States has an equal right to participate in the benefit of the public lands—the common property of the union.

(2) *Resolved*, That the States in whose favor Congress has not made appropriations of land for the purposes of education are entitled to such appropriation as will correspond, in a just proportion, with those heretofore made in favor of the other States.

(3) *Resolved*, That his Excellency, the Governor, be requested to transmit copies of the foregoing report and resolutions to each of our Senators and Representatives in Congress, with a request that they will lay the same before their respective houses, and use their endeavors to procure the passage of an act to carry into effect the just principle therein set forth.

(4) *Resolved*, That his Excellency, the Governor, be also requested to transmit copies of the said report and resolutions to the Governors of the several States of the union, with a request that they will communicate the same to the Legislatures thereof, respectively, and solicit their co-operation.

The attempt thus made in 1821 to obtain the then long-delayed right of Maryland to her just share in "the common property of the Union" failed before Congress, and no such attempt has been made since. But recently similar claims have been made by other States, and the time is opportune for a renewal of our claim.

It is hoped that as the large associations beforementioned, entitled from the character of their membership to represent public opinion, have taken action in this extremely important matter, the General Assembly will take suitable action requesting our Senators and Representatives in Congress to endeavor to secure the necessary action by the Congress of the United States.

I beg to express again my profound appreciation of the courtesy and consideration extended to me by the State Board of Education, and by the school officers and teachers throughout the State.

E. B. PRETTYMAN,

Secretary State Board of Education.

REPORT

OF THE

School * Commissioners

OF

THE COUNTIES.

ALLEGANY COUNTY.

Cumberland, Md., October 28, 1899.

PROF. E. B. PRETTYMAN,

Secretary State Board of Education.

Dear Sir: I herewith submit the Annual Report of the Public Schools of Allegany County, Maryland, for the year ending July 31, 1899.

Very truly Yours,

JOHN E. EDWARDS, *Secretary.*

SUMMARY OF SCHOOL STATISTICS.

FOR SCHOOL YEAR ENDING JULY 31, 1899.

	1899.	1898.
Number of school houses owned by the County, 100; rented, 3; total.....	103	
Frame, 85; brick, 15; total.....	100	
Number of male teachers (principals), white, 25; colored, 2; total.....	27	29
Number of female teachers (principals), white, 78; colored, 2; total.....	80	68
Number of male teachers (assistants), white, 1; total.....	1	
Number of female teachers (assistants), white, 98; colored, 3; total.....	101	96
Total, white, 202; colored, 7.....	209	193
Number of schools having out-buildings.....	103	100
Number of schools having sufficient blackboards.....	103	100
Number of schools having good furniture.....	103	98
Number of terms schools were open—white 3½; colored, 3½		
Number of different pupils for the year—white, 10,084; colored, 303; total.....	10,387	
Number of pupils in average attendance—white, 5,930; colored, 184; total.....	6,114	
Number of official school visits paid by examiner.....	140	

SUMMARY OF SCHOOL STATISTICS—Continued.

CAROLINE COUNTY.

OFFICE OF THE SCHOOL BOARD,

Denton, Md., August 15, 1899.

HON. E. B. PRETTYMAN,

Secretary State Board of Education,

Baltimore, Md.

Dear Sir: We herewith submit the Report of the Public Schools of Caroline county for the fiscal year ending July 31, 1899.

The financial condition of our Board is entirely satisfactory; for notwithstanding the fact that during the year we built and furnished four school houses at a cost of three thousand dollars, we are practically free from debt.

We expect to build during the coming year a High School Building for Denton, where the school has outgrown the facilities of the present building, which will be used as a Primary School Building. A lot has been secured for the new building, which will provide six school rooms, an assembly room and a room for a library.

By reference to the statistics of this report it will be found that the number of pupils in the higher grade studies is steadily increasing. There were eight graduates from the County High School at the last commencement, which is the greatest number ever graduated in any year.

Our school work for the past year was seriously embarrassed by the extreme cold weather of the blizzard, numerous school holidays and institute week. It is our opinion that the observance of holidays by closing the schools works harm to public education by temporarily disorganizing the school. The good results of such observance do not at all compensate for the bad effects of suspending the daily routine of school work. Were it mandatory that a portion of each holiday be set apart for carrying out a special programme commendatory of that particular event, it would prove a more worthy observance, and at the same time would avoid the disorganizing influence which closing our schools, even for one day during the school week, engenders.

Respectfully submitted,

THOS. W. JONES, *President.*

H. F. STEVENS,

H. C. FISHER.

M. B. STEPHENS, *Secretary.*

SUMMARY OF SCHOOL STATISTICS

FOR SCHOOL YEAR ENDING JULY 31, 1899.

	1899.	1898.
Number of school houses owned by the county, 69; rented, 3; total.....	72	73

CARROLL COUNTY.

OFFICE OF THE

BOARD OF COUNTY SCHOOL COMMISSIONERS OF CARROLL COUNTY,

Westminster, Md., October 19, 1899.

PROF. E. B. PRETTYMAN,

*Secretary State Board of Education,**Baltimore, Md.*

Dear Sir—I herewith submit my Annual Report of the public schools of Carroll County for the year ending July 31st, 1899.

The year has been one of decided advancement. Our teachers, with comparatively few exceptions, have been doing earnest and efficient work, co-operating with the officials in their endeavors to build up the school system to a higher standard with their limited means. District teachers' associations have been encouraged and established in quite a number of election districts. These meetings are being a great source of help to those who participate, giving freedom in speech, inspiring more professional spirit and giving a broader view of school work by discussions of methods of teaching and of school management. Our financial condition has not permitted an increase in the salaries of teachers, which are entirely too low, resulting quite often in the loss of a first grade teacher, who naturally goes to another field when an opening occurs. The ability to pay a salary, which shall be at least a fair compensation 'tis a consummation devoutly to be wished" on the part of teachers and school officers. Public interest in our schools has been manifested in many localities, especially in the populous centers where the people are demanding high schools at which their sons and daughters can prepare for college or counting-room at home, under home influence and restraints. At Westminster, Hampstead, Manchester, Union Bridge, Mt. Airy and Sykesville. where patrons and teachers are especially alive to the importance of secondary education, high school work is well under way, and the outlook is all that can be expected with our present available facilities. You will notice that I report a larger number of high grade pupils than has heretofore been reported, which is the result of this high school work. Next year will show a further gain in this direction. I report 41 Latin pupils, as against none heretofore. In the year 1897 and 1898 there was no public school in Carroll which could properly be classed as a high school. One hundred and ten more pupils were enrolled this year than last, but the average attendance was somewhat lower, caused by the severe and disagreeable winter and spring, and the prevalence of measles and diphtheria in many localities, causing the temporary closing of a number of schools. The vaccination law has been enforced at the expense of considerable friction in some localities between parent and teacher, owing to misunderstanding of the meaning and intent of the

law. At least 75 per cent. of the pupils below the sixth grade had never been vaccinated. Considerable trouble was caused by impotent virus and many operations proved ineffectual, necessitating re-vaccination. There are very few school libraries in this county. In order to promote more interest among the teachers in the establishment of these libraries, a committee consisting of one live teacher from each election district of the county was appointed at the annual teachers' institute, which committee met and discussed ways and means of working in this direction, and reported the following resolution, which was unanimously adopted by the institute: "Resolved, That to advance the cause, we recommend that in each of the election districts a committee of three teachers be appointed by the Examiner to stimulate interest among the teachers and patrons of each school, and this committee shall suggest to the several teachers of their district plans for raising library funds, and shall conduct an exchange of books between libraries, after they have been so established, when desired by schools possessing them." This committee has been appointed, and it is to be hoped that lasting practical results will follow. I regret our financial inability to provide our schools with much needed globes, wall maps, charts, etc., of which the number in our schools is exceedingly limited. We have, however, continued to furnish stationery to the pupils free of charge, so that our schools are now what the name would indicate, *free* public schools. It is to be hoped that the $5\frac{1}{4}$ cent. tax, heretofore levied to reduce the State debt, will be continued and apportioned to the various counties as a school fund, so that we may be able to furnish these various needed facilities and pay our teachers better salaries. The people have been paying this tax cheerfully, and undoubtedly would continue it for this purpose and not consider it a burden. Our Teachers' Institute, held January 23d to 27th inclusive, was a decided success, and the teachers were a unit in their expressions of appreciation. The afternoon and evening sessions were attended by large audiences of interested citizens crowding the new High School assembly hall to its utmost capacity. Various patriotic societies have during the year presented a number of schools with Bible and flag, with appropriate public exercises, which have been largely attended by the citizens of the neighborhood, and patriotism and the importance of education has thereby been taught. Of the finances of the Board, I have to report that when the present Board assumed control of school affairs August 1st, 1898, there was a school debt of \$20,798.62, less cash in bank \$1,730.48, or a net debt of \$19,068.14. There were also contracts assumed amounting to \$16,183.08, making the total obligations assumed by this Board \$35,251.22. On the 1st of August, 1899, the total debt was only \$30,578.63, less \$93.60 in bank, or a net debt of \$30,485.03, being a total net reduction of assumed obligations of \$4,766.19 during the year, after meeting and providing for all obligations assumed. The interest and discount account shows a payment of \$1,940.13. As nearly all the debt was bearing six per cent. interest, and has been reduced to 5 per cent., this account should show at least a reduction of \$300.00 next year. The most rigid economy and business care has been exercised to bring about the above result. And yet the essential needs have not been neglected. One school house was settled for, which

was built in 1897. Six brick buildings, including the Westminster High School building, were erected. One frame building was enlarged by the addition of one room, and one brick building was torn down and erected in a more suitable location, causing a total expenditure of \$15,385.82 for new school houses. The school debt ought to be bonded at a low rate, and provision made for the retirement of a number of bonds each year. With the county practically out of debt, I believe bonds bearing $3\frac{1}{2}$ per cent. interest could be sold at par. This would affect a saving of \$450 interest yearly, which could be used for retiring bonds. The General Assembly will probably be asked to pass an enabling act.

Respectfully submitted,

DEWEES L. FARRAR, *Secretary.*

SUMMARY OF SCHOOL STATISTICS.

FOR SCHOOL YEAR ENDING JULY 31, 1899.

	1899.	1898.
Number of school houses owned by the county, 119; rented, 11; loaned, 6; total.....	136	134
Concrete, 1; frame, 32; brick, 93; log, 2; stone, 8; total...	136	134
Number of rooms occupied when attendance is largest.....	165	141
Number of male teachers, (principals), white, 73; colored, 6; total.....	79	79
Number of female teachers (principals), white, 51; colored, 5; total.....	56	53
Number of male teachers (assistants), white, 13; total.....	13	17
Number of female teachers (assistants), white, 23; total...	23	27

FREDERICK COUNTY.

OFFICE OF THE
BOARD OF SCHOOL COMMISSIONERS FOR FREDERICK COUNTY,

Frederick, Md., September 22, 1899.

PROF. E. B. PRETTYMAN,

*Secretary State Board of Education,
Baltimore, Md.*

Dear Sir—We have the honor to present you the report of the Board of County School Commissioners of Frederick County for the year closing July 31, 1899. The schools were continued to May 15th this year, which was one month longer than in the preceding year. Thirty-eight schools have libraries; aggregate number of volumes 3,354. By reference to the statistics of the annual report you will perceive that the enrollment of pupils shows a considerable increase, which is due in great part, if not entirely, to the issue of free text books. To complete the system, it only needs to make supplies free also. The objection heretofore made against free supplies was that the term (supplies) was too comprehensive, and, like charity, might "cover a multitude of sins," or, in other words, might be applied to almost anything from a pencil to a piano. This objection, however, might be obviated by specifying what is meant by supplies, which should include only copy books, composition books, slates, slate pencils, penholders, pens, crayons and ink.

By reference to the Free Text Book account for Frederick county it is apparent that it will be possible, without the increase of the appropriation by another dollar, to place all the items enumerated on the free list.

Under present conditions not all that is possible in progress in writing is being accomplished.

Our teachers are either too timid to insist upon the pupils purchasing what supplies are required, or the parents decline to do so. In either event, the pupils do not receive the full benefit of the course of instruction.

Respectfully yours,

E. R. ZIMMERMAN, *President.*

EPHRAIM L. BOBLITZ, *Secretary.*

SUMMARY OF SCHOOL STATISTICS.

FOR SCHOOL YEAR ENDING JULY 31, 1899.

	1899.	1898.
Number of school houses owned by the county, 165; rented, 13; total.....	178	177
Frame, 67; brick, 68; log, 14; stone, 16.....		
Number of rooms occupied when attendance is largest.....	240	238
Number of male teachers (principals), white, 99; colored, 17; total.....	116	114
Number of female teachers (principals), white, 52; colored, 11; total.....	63	61
Number of male teachers (assistants), white, 7; colored, 1; total.....	8	5
Number of female teachers (assistants), white, 52; colored, 4; total.....	56	62
Total white, 210; colored, 33.....	243	242
Number of fenced lots.....	29	78
Number of schools having outbuildings.....	178	177

QUEEN ANNE'S COUNTY.

Centreville, Md., October 11, 1899.

PROF. E. B. PRETTYMAN,

Secretary State Board of Education,

Baltimore, Md.

Dear Sir—I herewith present my report of the public schools of Queen Anne's County, Md., for the year ending July 31, 1899.

Our schools are doing well—financial condition excellent. The average attendance is lower than it should be. This is caused by berry-picking and pea-picking in late spring and early summer. Especially is this so with our colored schools. Our buildings, with few exceptions, are in good repair and comfortable. We are having every school house repaired and repainted, painting them a uniform color. This adds very much to their improvement and appearance. While the free-book system is working well, it does not give the results it should.

Very truly yours,

L. L. BEATTY.

SUMMARY OF SCHOOL STATISTICS

FOR SCHOOL YEAR ENDING JULY 31, 1899.

	1899.	1898.
Number of school houses owned by county—white, 54; colored, 17; rented, 2; free, 1; total.....	74	74
Frame, 70; Brick, 4; total.....	74	74

APPENDIX.

EXTRACTS FROM THE BY-LAWS

—OF THE—

State Board of Education.

The following classification and schedule of studies shall be observed in all Primary and Grammar Schools, and in those classes of High Schools to which they are applicable:

FIRST GRADE.

1. Reading and spelling from Chart or Blackboard; reading or spelling Primer or First Reader. 2. Writing capitals and small letters from copies on blackboard. 3. Counting objects. 4. Writing figures as far as 100. 5. Adding, subtracting, multiplying and dividing by 2, 3, 4, orally and by written work. 6. *Drawing*. 7. *Object lessons*. 8. *Singing*.

SECOND.

1. Reading and spelling to the end of Second Reader. 2. Writing words and sentences from blackboard and from Second Reader. 3. Writing and reading figures as far as 1,000. 4. Adding, subtracting, multiplying and dividing by 5, 6, 7, 8, 9. Mental Arithmetic. 5. *Drawing*. 6. *Object lessons*. 7. *Singing*.

THIRD.

1. Reading and spelling to the end of Third Reader. 2. Copying on slates the lessons of the Reader, and exercises in Dictation. 3. Spelling, one-half of Primary Spelling-Book. 4. Writing and reading figures as far as millions. 5. Addition, subtraction, multiplication and long and short division. Mental Arithmetic. 6. Writing in Copy-Book, Nos. 1 and 2. 7. Language lessons begun. 8. Oral lessons in Geography, including the Maps of Maryland and the United States. 9. *Drawing*. 10. *Object lessons*. 11. *Singing*.

FOURTH.

1. Reading and spelling to the end of Fourth Reader. 2. Primary Spelling Book completed. 3. Copying of lessons in Fourth Reader. Reading from slates the lessons copied; Dictation and Reproduction exercises. 4. Elementary Arithmetic, through Fractions. Mental Arithmetic. 5. Writing Copy-Book, Nos. 3 and 4. 6. Primary Geography, with Oral lessons and Map Drawing. 7. Language lessons continued. 8. *Drawing*. 9. *Object lessons*. 10. *Singing*.

FIFTH.

1. Reading and spelling, Fifth Reader, alternate with History of Maryland and of the United States. 2. Writing lessons in Fifth Reader from Dictation. 3. Spelling, an Advanced Spelling-Book. 4. Arithmetic, 2d book

Subjects in italics are recommended, but are not obligatory.

completed. Mental Arithmetic. 5. Writing, Copy-Book, No. 5. 6. Language lessons continued, with Composition and Letter Writing. 7. Grammar, Parsing and Analysis of easy sentences. 8. Advanced Geography. 9. Elementary Physiology. 10. *Drawing*. 11. *Singing*. 12. *Needle-work* and *Domestic Economy* (for girls). 13. *Elements of Agriculture*, when ordered.

SIXTH.

1. Reading and spelling to end of Fifth Reader, alternate with History of Maryland and of the United States. 2. Spelling, advanced Spelling-Book completed. 3. Practical Arithmetic completed. Mental Arithmetic. 4. Writing, Copy-Book, No. 6. 5. Advanced Grammar. 6. Geography completed. 7. Lessons in Composition and Letter Writing. 8. Physiology completed. 9. *Drawing*. 10. *Singing*. 11. *Needle-work* and *Domestic Economy* (for girls). 12. *Elements of Agriculture*.

TIME TABLE.

Each grade may have four daily recitations, as follows:

1st.	1 lesson of 15 minutes and three of 10 minutes each—	45 minutes.
2d.	“ 15 “ “ 10 “ —	45 “
3d.	“ 15 “ “ 10 “ —	45 “
4th.	2 lessons of 15 minutes each and 2 of 10 each —	50 “
5th.	“ 15 “ “ 10 “ —	50 “
6th.	1 lesson of 20 minutes and three of 15 minutes each —	65 “

The available portion of the remaining hour, and the time that may be gained by the absence of all pupils in any grade, may be spent in general exercises, or in studies above sixth grade, when there are pupils sufficiently advanced.

HIGH SCHOOLS.

8. The High School course shall begin with the completion of the sixth grade, and may include all the studies required for admission into the Freshman class at college.

9. No school shall be classed as a High School unless it contains at least two grades higher than the sixth.

10. The following schedule of studies is recommended for adoption in the High Schools and the higher classes of graded schools.

SEVENTH.

1. Arithmetic reviewed. 2. Algebra (Wentworth's or Robinson's) through Equations of the first degree. 3. Geometry (two books of Wentworth or an equivalent) Geometrical Drawing. 4. Physical Geography. 5. English Grammar—Morris' "Elementary Lessons." Parsing and Analysis of "Paradise Lost," Book I. 6. Practical exercises in Composition. 7. English History—Green's "Short History." 8. Latin Grammar and Reader. 9. Book-keeping. 10. Physiology—(Martin's Human Body).

EIGHTH.

1. Algebra through Equations of the second degree and Progressions. 2. Geometry, Plane and Solid, completed. 3. Natural Philosophy. 4. Rhetoric. 5. Modern History. 6. Latin—Cæsar "De Bello Galico," three books. 7. Physiology completed.

NINTH.

1. Plane Trigonometry and Surveying. 2. Chemistry. 3. Botany. 4. Ancient History. 5. English Literature (Sharv's). 6. English Language (Lounsbury). 7. Elocution. 8. Latin—Virgil's *Æneid*, four books; Sallust—"The Conspiracy of Catiline."

TWENTY-EIGHTH ANNUAL REPORT

— OF THE —

INSURANCE COMMISSIONER

— OF THE —

STATE OF MARYLAND

To His Excellency LLOYD LOWNDES, Governor.

1899.

BALTIMORE:
WM. J. C. DULANY CO., STATE PRINTERS.

1900.

REPORT
OF THE
Insurance Commissioner of the State of Maryland.

ANNAPOLIS, May 15, 1899.

*To His Excellency, LLOYD LOWNDES,
Governor of the State of Maryland.*

SIR—I have the honor herewith to submit the Twenty-eighth Annual Report of the Insurance Department, containing statements in detail of Insurance Companies for the year 1898 admitted to operate in this State, together with such an abstract and analysis of them as appeared proper to exhibit the progress of the business and the condition of the companies.

The report comprises tabulated statements showing Assets and Liabilities, Income and Expenditures, Risks Written, Premiums Received, and Losses Paid of the various Fire, Marine, Life, Accident, Assessment, Fidelity and Casualty Companies, also Fraternal Associations. The business transacted is compiled from the returns of the companies filed in this office.

The following Insurance Companies were admitted to this State during the year 1898 and up to date of this report:

DATE OF AD- MISSION.	NAME AND LOCATION.	CLASSIFI- CATION.
April 8, 1899.	Equitable Fire Ins. Co., Snow Hill, Md.....	Fire.
May 25, 1899.	Fidelity Fire Ins. Co., Baltimore, Md.....	Fire.
April 8, 1899.	Globe and Rutgers Fire Ins. Co., New York, N. Y.....	Fire.
June 20, 1898.	Helvetia-Swiss Fire Ins. Co., St. Gall, Swit- zerland.....	Fire.
Sept. 22, 1898.	Indemnity Fire Ins. Co., New York, N. Y.	Fire.
June 17, 1898.	North British and Mercantile of New York, New York, N. Y.....	Fire.
April 20, 1899.	United Fire Ins. Co., Baltimore, Md.....	Fire.
Oct. 7, 1898.	Washington Assurance Co., New York, N. Y	Fire.
April 8, 1899.	Covenant Mutual Life Ins. Co., St. Louis, Mo	Life.
Aug. 1, 1898.	State Life Ins. Co., Indianapolis, Ind.....	Life.
May 20, 1898.	Maryland Beneficial Union, Baltimore, Md..	Fraternal.
June 29, 1898.	United Fraternal Accident Order, Balti- more, Md.....	Fraternal.
Nov. 22, 1898.	Woodman of the World, Omaha, Neb.....	Fraternal.

The following companies have ceased doing business in this State since the publication of the last report:

NAME OF COMPANY.	LOCATION.	CLASSIFICATION	REMARKS.
Ætna Indemnity.....	Hartford, Conn.	Fidel. and Cas.	Retired.
American Protective League	Baltimore, Md...	Fraternal.....	Wm. E. Hoffman, receiver.
Associated Firemen's..	Baltimore, Md...	Fire.....	Absorbed by Fidelity Fire.
Boston Mutual.....	Boston, Mass.....	Assessment ...	Retired.
Buffalo Commercial.....	Buffalo, N. Y.....	Fire.....	Retired.
Buffalo German.....	Buffalo, N. Y.....	Fire.....	Retired.
Eureka Fire & Marine..	Cincinnati, O....	Fire.....	Retired.
Farmers Mutual.....	Wilmington, Del	Fire.....	Retired.
Globe Ins. Co.	New York, N. Y.	Fire.....	Now the Globe and Rutgers.
Howard Fire.....	Baltimore, Md...	Fire.....	Absorbed by United Fire.
Insur. Co. State of N. Y.	New York, N. Y.	Fire.....	Retired.

Maryland Fire Insurance Companies.....	13
Maryland Mutual Fire Insurance Companies.....	19
Other States, Mutual Fire Insurance Companies.....	3
Other States, Fire and Fire-Marine Insurance Companies..	64
Foreign Fire and Fire-Marine Insurance Companies.....	37
Fidelity and Casualty Companies of this and other States..	22
Credit Insurance Companies of other States.....	2
Maryland Life Insurance Companies.....	4
Other States, Life Insurance Companies.....	33
Foreign Life Insurance Companies.....	1
Stipulated Premium Life Insurance Companies.....	1
Co-operative Assessment Associations and Mutual Aid Societies of this and other States.....	8
Fraternal Beneficiary Associations of this and other States..	27
Total	234

BUSINESS OF 1898.

The following statement is an abstract of all branches of insurance transacted in this State in 1898. Premiums received and losses paid are therein contained, and it is to be regretted that with but few exceptions, as compared with 1897, it is not an exhibit of gain, but loss. Marine Insurance is one of the exceptions, giving the year an enviable distinction of being profitable.

Our local Surety and Casualty Companies, being aggressive and ably managed, have experienced prosperity during the past year. There has been much unrest and friction in fire business. The prosperous years which have been enjoyed have tended towards disorganization, likewise failing to maintain profitable rates.

You will observe, upon inspection of many of the reports this year, that the chief source of gain will be found in the investment department, resulting from an appreciation in securities rather than underwriting.

The withdrawals from this State have been unusually large during the past year, and illustrates the fact of their inability to endure the competition which now exists.

	Premiums Received in Maryland.	Losses Paid in Maryland.
FIRE INSURANCE:		
Maryland Fire Ins. Companies of Baltimore	\$408,487 38	\$165,395 91

Total	\$7,906,914 13	\$4,063,394 64

COMPARATIVE SUMMARY OF BALTIMORE JOINT STOCK
FIRE INSURANCE COMPANIES.

	1897.	1898.	Increase or Decrease.
Capital.....	\$2,685,500	\$2,505,500	— \$180,000
Gross assets.....	7,974,071	7,928,304	— 45,747
Gross liabilities.....	1,498,067	1,407,231	— 90,836
Premiums received.....	953,409	810,879	— 142,530
Losses paid.....	379,581	450,149	+ 70,568
Losses incurred.....	425,334	430,764	+ 15,430
Gross receipts.....	1,301,315	1,198,794	— 102,521
Gross expenditures.....	1,024,569	1,089,025	+ 64,456
Amount of risk.....	187,537,683	180,898,137	— 6,639,546
Surplus.....	3,790,485	4,015,572	+ 225,087
Dividends paid.....	214,595	212,567	— 2,028
Amount written during the year	141,987,825	133,761,757	— 8,226,068

From the above figures it is apparent that the past year has been an unprosperous one for the Maryland companies, the premium receipts showing a decrease of one hundred and forty-two thousand dollars less than those of the preceding year, the losses seventy thousand dollars more. Capital, Assets, Liabilities, etc., all show a very material decrease. The companies of other States and foreign countries have met with a corresponding unprofitable year.

Three local companies have retired since January 1st, viz; Associated Firemens, which was absorbed by the organization of the Fidelity Fire Insurance Company of Baltimore, also the Howard and National, which were absorbed by the organization of the United Fire Insurance Company of Baltimore.

LIFE INSURANCE.

In the report made a year ago, comment was made upon the increased volume of life insurance effected in this State during the year 1897 as compared with 1896. It is gratifying to note that with continued confidence in the stability of financial conditions and a consequent general increase of prosperity among the people, there has been a considerable gain in the amount of insurance effected during the past year as compared with 1897.

The following figures for new business written in the State of Maryland during the two years are as follows:

	1897.		1898.	
	Policies.	Amount.	Policies.	Amount.
Ordinary insurance.....	5,408	\$12,652,572	7,094	\$14,620,464
Industrial insurance.....	90,235	11,524,830	131,998	13,278,201
Total.....	95,643	\$24,177,402	139,092	\$27,898,665

The average amount of policy of ordinary insurance decreased from \$2,340 to \$2,061, so that while the number of policies issued increased more than thirty per cent. as compared with the previous year, the amount of insurance effected increased less than fifteen per cent.

The large increase in industrial insurance, as compared with the previous year, is chiefly due to the inclusion in this

statement for the first time of the business of the Baltimore Mutual Aid Society of Baltimore City, which formerly conducted upon the assessment plan, was during the past year reorganized upon the stock plan under authority given to it by Act of Assembly. The amount of insurance effected in Maryland reported by this company, \$1,735,849.75, very closely corresponds with the increase in the amount of industrial insurance, while the number of policies issued exclusive of those reported by this company (33,320) shows an increase of about nine per cent. The average amount of policy issued by the Mutual Aid Society appears to be but \$52 and, with its business included, the average amount of insurance under industrial policies issued in this State during 1898 was but \$100 as compared with \$128 during the previous year.

The decline in the rates of interest obtainable upon investments of the class to which life insurance companies are restricted, is a subject that has during the past year received the most serious consideration from those charged with the responsibility of the management of those companies. It is generally conceded by those most familiar with the financial situation that low rates of interest may be expected to prevail in this country for many years to come, probably permanently. With the increase of wealth and accumulation of capital seeking investment, the same conditions have arisen here that have long existed in older countries of Europe, and corresponding results in decline of rates of interest follow.

Fifty years ago the business of life insurance first began to be developed in this country. The few companies then existing, with remarkable prudence and farsightedness, adopted four per cent. interest as the rate to be assumed for the future increments of their sinking funds. During the greater part of the half century that has since elapsed, very much higher rates of interest were easily obtainable, so that a large margin for surplus earnings was derived from interest receipts; but, under the changed conditions, numbers of companies have been adjusting their premium rates for new business upon the

basis of three and one-half per cent. or even three per cent. as the rate to be assumed for future interest earnings. This has naturally involved an advance in rates of premiums, for a decrease in receipts from interest necessitates an increase in premium revenue, if the total receipts from interest and premiums together are to be kept up to the amount requisite for meeting current and maturing claims under insurance contracts.

With the advance in premium rates there has developed a disposition greatly to broaden the scope of the insurance contract, in the removal of restrictions upon travel, residence and occupation, reducing to a minimum the conditions under which policies may become forfeited, and especially in the introduction into policies of guarantees as to the amount of cash obtainable for them in the event of surrender. One company has since the first of the year announced a policy absolutely incontestable, for any cause, from the date of its issue. When surrounded with proper safeguards for the company, this liberalizing of the form of the insurance contract is no doubt a great improvement, especially in eliminating the harsh features by which not many years ago policies of life insurance, upon which premiums had been paid for many years, used sometimes to be forfeited through accidental neglect or oversight on the part of the policyholders, and the benefits of careful savings lost to those for whose protection they had been made. The business of insuring lives is, however, like all forms of insurance, a business of assuming risks, the risk of death; and prudence would suggest that it may be unwise to complicate with this risk obligations that involve other risks, such as agreements for the purchase of policies upon demand, as such demands may be most frequent in times of financial stringency, when, if the sale of securities were made to meet such demands, they would have to be sold upon a depressed market, and consequently at a loss. But with proper reservation, such as savings banks ordinarily adopt for their protection, the terms upon which surrendered

policies will be purchased by the company can no doubt be safely embodied in the contract. The guaranteed cash values are now much larger than those formerly given by companies generally for similar policies, thus considerably reducing the amount of compensation to the company for the withdrawal of a risk below the figure which was formerly considered no more than adequate.

When the Insurance Department was first established in this State, and laws enacted prescribing the method for ascertaining the liabilities of life insurance companies on account of outstanding policies, it was provided that policies should be valued according to the American Experience Table of Mortality with interest at four and one-half per cent. This was in accordance with the existing laws in a number of States. Since then, however, the standard of valuation has in most States been changed to the Actuaries' Table of Mortality with four per cent. interest; and a number of companies doing business in this State have asked to have valuations upon this higher standard accepted by this Department, so as to avoid the cost of a double valuation. These requests I have felt justified in acceding to, as the authority under the law seemed plain for the Insurance Commissioner to accept valuations upon any sound basis *not less* than the one prescribed in this State (Code, Art. 23, Sec. 122, Par. 3).

Legal valuations, imposed as a measure of solvency should, in my judgment, be somewhat lower than that adopted in the usage of the most prudently managed companies; but with the tendency on the part of the companies now to adopt the assumption of lower rates of interest, three and one-half or three per cent., it seems as though the time has come to change the legal standard of valuation in this State to the four per cent. basis, as has been done in the States in which most of the life insurance companies in the country are situated.

Two or three companies, organized in this State, grant insurance against sickness, guaranteeing a certain weekly

indemnity in the event of disability from sickness. The authority for conducting this business by corporations formed under the General Laws of this State, is not to be found in that part of Article 23 of the Code, Sec. 14 to 37 inclusive, in which the purpose for which corporations may be formed are enumerated and classified, unless it be included in Class 4, Sec. 27, which provides for the formation of fire, life, marine, accident, cattle, live stock and *other* insurance companies. Sec. 115 provides that every corporation formed under the provisions of this Article for the purpose of life insurance is authorized also to insure individuals against accident, but this would seem to indicate that authority for insurance against sickness was not included in the powers of a life insurance company formed under the provisions of the Article, unless expressly specified. In Sec. 128, however, as amended by the Acts of 1892 and 1894, it is provided that organizations issuing certificates for the payment of money or other benefits in the event of sickness, accident or death, or other contingency, . . . but issuing no certificate for the payment of a greater sum than \$1,000 upon any one life, may be formed on the mutual co-operative assessment or stock plan.

No standard has been prescribed by law for determining the liability of companies granting insurance against sickness, or the amount of reserve to be held. Like the rate of mortality, the yearly rate of sickness, all experience shows, increases with advancing age. Therefore, where there is an increasing liability, with a fixed rate of premium with which to meet it, a reserve proportioned to the nature of the risk and the rate of the increase should undoubtedly be maintained. It would be advisable for legislation to be had on this subject, so that the Insurance Department may be enabled to see that companies which offer health insurance preserve the means of meeting the obligations which they assume. There are sufficient statistics in existence, based upon the experience of friendly societies, etc., to afford a basis for estimating the average yearly rate of sickness at the several ages of life.

EXAMINATIONS.

In accordance with the requirements of the Statutes of Maryland, the quadrennial examinations for the purpose of ascertaining the condition of all companies and associations chartered by this State, were begun June, 1898, and completed April, 1899. This fact has been mutually beneficial to companies and associations as well as to the Department.

It is gratifying to state that, in making these examinations, this Department experienced the most pleasant relations conceivable with the companies and associations; every facility and co-operation was accorded the examiner by the officers and clerical force.

It was generally admitted the examinations were beneficial, in that they were given to the public in an official form of publication. The fees charged were reasonable; in no instance was the payment of the examiner's bill objected to or even criticised.

American Bonding and Trust Company:

Condition as of June 1, 1898. Report filed June 28, 1898.

Fidelity and Deposit Company:

Condition as of July 1, 1898. Report filed July 21, 1898.

Shield of Honor:

Condition as of Aug. 19, 1898. Report filed Aug. 20, 1898.

Fraternal Legion of Baltimore:

Condition as of Aug. 24, 1898. Report filed Aug. 29, 1898.

Order of Columbus:

Condition as of Aug. 29, 1898. Report filed Aug. 31, 1898.

Ancient Order of United Workmen (Maryland Jurisdiction):

Condition as of Aug. 31, 1898. Report filed Sept. 7, 1898.

Order of the Golden Chain (Period from Jan. 1, 1898, to July 16, 1898):

Condition as of Sept. 14, 1898. Report filed Sept. 20, 1898.

Maryland Fire Insurance Company:

Condition as of Sept. 30, 1898. Report filed Oct. 24, 1898.

Peabody Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed Mar. 1, 1899.

Baltimore Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed Mar. 7, 1899.

Firemen's Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed Mar. 13, 1899.

Home Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed Mar. 23, 1899.

American Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed Mar. 29, 1899.

Old Town Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed April 6, 1899.

Baltimore Equitable Society:

Condition as of Jan. 1, 1899. Report filed April 15, 1899.

German-American Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed April 20, 1899.

German Fire Insurance Company:

Condition as of Jan. 1, 1899. Report filed April 29, 1899.

LEGISLATION.

In my preceding report I briefly outlined such legislation as I had endeavored to have enacted as amendments to the Insurance Laws of this State; again I am compelled to urge upon you the absolute necessity for a thorough revision of these laws.

I recommend that a commission be appointed by you, including the Counsel of this Department and the Insurance Commissioner, who shall prepare for submission to the next General Assembly such a revision as above indicated.

The defects of the present law are glaring; it requires but little experience and examination to be persuaded of the necessity of this revision. I am convinced if the Legislature would take action in this direction insurance legislation would result that would afford greater protection to the citizens of this State and facilitate the transaction of business in this Department.

OVERHEAD WRITING IN MARYLAND.

Under date of September 6, 1898, this Department circularized as follows all companies authorized to transact business in this State:

"Complaint is being made to this Department that unlicensed insurance companies are doing business in this State, and thereby depriving the State of revenue which it should receive and obtaining profits of business which should go to companies that comply with the insurance laws. There is ample provision in the insurance laws of this State for the punishment of unlicensed agents and companies if they are detected."

I am constantly calling the attention of the public to this insecure and fraudulent character of insurance. I believe this notice has resulted in diminishing to some extent this imposition upon our citizens.

It is the determination of this Department not to relax any effort in endeavoring to prevent overhead wiring in this State by detecting all persons who violate the law in this respect.

RESIDENT AGENT'S LAW.

Under date of November 3, 1898, this Department issued the following circular:

"Although there is no Resident Agent's Law in the Statutes of this State, yet there is ample provision for the collection of taxes on all premiums collected, as contained in Section 126, etc.

"Information is from time to time being received by this Department where the home offices are writing business and collecting premiums *direct*, the same not being received through their agents,

"In some instances I have made demand for said taxes and received same, but desire to inform you that I cannot continue this procedure. In the event this letter is applicable to your company, I request you to include all premiums received or secured in this State, or from residents thereof, in annual statement under oath filed with this Department. Failure to comply with this request, and upon satisfactory information by this Department of such violation, I am compelled to examine the books and records of your company, collect the expense of examination, and revoke the license of an offending company."

There is no diversity of opinion as to the demoralization in the practice by any company of writing over the head of the agent. The agent is interested in the risks in his field, and is entitled to his share of the premiums, and good agents are often lost to the companies by this disregard of their rights. Many of the States have legislated on this matter, not so much in the interest of the agent, but due to the fact that they lose the tax, and are further bounden to protect law-abiding companies which make an honest return on all premiums collected, and do not seek to evade the law.

FINANCES OF THE DEPARTMENT.

The receipts of the Department for the year 1898 were \$181,734.28, of which \$157,692.58 was derived from taxes and licenses, \$24,041.70 from fees. The gross receipts were

\$12,814.73 in excess of the previous year, and to this extent greater than ever before in the history of this Department. The surplus revenue occurring to the State, over and above the entire expenditures on account of the Department, was \$169,184.75.

In order to indicate to you a comparative statement of net receipts forwarded to the State Treasurer during my administration of this Department, I take as a basis the receipts of the last year (1895) of my predecessor, so that the annual increment can be appreciated, and the fact remains that increase upon increase has been derived in each successive yearly remittance:

Net receipts for 1895.....	\$134,100 98
“ “ 1896.....	142,363 52
“ “ 1897.....	157,221 55
“ “ 1898.....	169,184 75

The Commissioner desires and asks the co-operation of all good citizens in his efforts to enforce the laws. They can aid him greatly by insuring only with authorized agents and brokers in authorized companies, and by furnishing him information of violations.

Respectfully submitted,

F. ALBERT KURTZ,

Insurance Commissioner of Maryland.

AMERICAN BONDING AND TRUST COMPANY OF BALTIMORE, MD.

JAMES BOND, *President*, SAMUEL H. SHRIVER, *Sec'y and Treas.*

BALTIMORE, MD., June 28, 1898.

*To the Honorable F. Albert Kurtz,
Insurance Commissioner,
Annapolis, Md.*

SIR:—Acting under your appointment of June 13, 1898, I beg to state that I have completed an examination of the American Bonding and Trust Company of Baltimore, Md. The examination gives the condition of the Company to date of June 1, 1898, and shows the condition of the Company on that date to be as follows:

ASSETS.

**MUTUAL LIFE INSURANCE COMPANY
OF BALTIMORE, MD.**

MATTHEW S. BRENNAN, *President.* J. S. PIERCE, *Secretary pro tem.*

BALTIMORE, MD., July 14, 1898.

*To the Honorable F. Albert Kurtz,
Insurance Commissioner,
Annapolis, Md.*

DEAR SIR:—Acting under your appointment of June 20, 1898, I beg to state that I have completed an examination of the Mutual Life Insurance Company of Baltimore, Md. The examination gives the condition of the Company to date of May 31, 1898, and shows the condition of the Company on that date to be as follows:

ASSETS.

Real estate and ground rents.....	\$50,005 52
Mortgages.....	20,700 00
Baltimore City Stock.....	5,200 00
Bank Stock.....	12,950 00
Loans on collateral (secured).....	51,330 03
Cash in Company's office, banks, etc.....	9,638 52
Agents' debit balances (secured).....	832 03
Interest due and accrued.....	4,267 91
Uncollected premiums.....	39,434 08
Total assets.....	\$194,358 09

LIABILITIES.

Net reserve.....	\$184,116 03
Salaries.....	2,165 56
Agents' cash security.....	645 00
Liabilities on policyholders' account.....	\$186,926 59
Surplus on policyholders' account.....	\$7,431 50
Balance of scrip outstanding, payable out of the accumulation of the Society when they amount to \$100,000.....	7,431 50

The reduction in the assets of the Company, as shown above, when compared with their report to you on December 31, 1897, is largely made up from an item they call "Initiatory Notes," and which they heretofore included in their assets. Some of these no doubt have a contingent value, but I do not consider it sufficient to allow them as part of the funds of the Company.

Respectfully submitted,

(Signed,)

JOHN W. PULIS, *Special Examiner.*

**EUREKA MUTUAL AID SOCIETY,
BALTIMORE, MD.**

W. S. GILLESPIE, *President.*

ANNUAL REPORT OF THE STATE BOARD OF HEALTH.

TO HIS EXCELLENCY JOHN WALTER SMITH,

Governor of the State of Maryland.

The death of Mr. Frederick H. Smith and the appointment of Dr. S. Chase de Krafft to a position in the federal army necessitated a change of duties on the part of the members of the Board. Any inconvenience that might have resulted from these unforeseen circumstances was remedied by the prompt and unremitting services of the Secretary, whose very ample report we have now the honor to present to your Excellency. The work done that is most important may be summarized as follows:

The vital statistics law of the last General Assembly, the good effects of which have been already felt throughout the State.

The bacteriological service of the State has been of great and generally recognized utility by the medical profession.

Analyses have been made of about three hundred specimens of water from different parts of the State during the past year. This work has been done at the request of medical men, and frequently by the heads of families, which requests are made through local health officers.

The inspector has, by direction of the Board, visited and inspected slaughter-houses throughout the State. He also interviewed all the undertakers in all the important towns, and instructed them concerning the operations and technical details of the vital statistics law. In addition to this he has travelled extensively in examining water supplies. In his manifold labors he has greatly assisted the Secretary.

The Board now meets monthly and your Excellency will agree that the amount of necessary important business could not be properly discussed and treated with due consideration if we met as formerly, but four times a year.

The number of local boards have increased in two years from twenty-five to thirty-nine. This of itself proves the extent and progress of the work of the Board. These thirty-nine boards of health give employment to forty-two health officers, not including the fifteen vaccine physicians in Washington County, all of whom have definite sanitary duties aside from vaccination. The Board of Health of Baltimore is not included in this list.

At the last meeting of the Board, the second week in January, 1900, the following officers and employees were elected:

Dr. William H. Welch was elected President; Prof. W. B. D. Penniman, Analyst, and Mr. Charles N. Mitten, Inspector.

JOHN MORRIS, M.D.,

President (pro tem.) State Board of Health of Maryland.

REPORT OF THE SECRETARY.

REGISTRATION OF BIRTHS AND DEATHS.

The last report to the State Board of Health began with an account of the registration law enacted by the General Assembly of 1898, and pointed out some of the difficulties which were anticipated in its administration. We shall be able to show in the present report the results which the law has yielded during the year ending June 30th, 1899.

We shall not present numerical tables, because the returns as collected by the State Registrar would in that form be seriously misleading. Our returns of death on file at the central office represents not more than fifty-five per cent. of the true mortality of the State outside of Baltimore City, and the returns of birth are certainly under fifty per cent. of the actual birth rate.

Full returns of deaths were collected, during the year ending June 30th, 1899, only by local registrars for Brunswick and Frederick, in Frederick County, and for Lonaconing and Frostburg, in Allegany County. Cumberland, the most important town in the State, after Baltimore, has had a burial permit ordinance for many years, but the local registrar for that town is not known to have made a single record in the year of any birth or death. Thus Cumberland is shown to be less enlightened upon her own sanitary condition and in this respect more indifferent to the welfare of her citizens than the smaller towns of Lonaconing and Frostburg, in the same county.

Since June 30th, 1899, Annapolis and Hagerstown have passed burial permit ordinances, and full returns are now being collected. Easton, Ellicott City, Havre de Grace, Canton, Highlandtown, Cambridge, Laurel, Pocomoke City, Steelton, Towson, Centreville, Williamsport, Port Deposit, Chestertown, Elkton, Westminster, Belair, Crisfield, and Salisbury are but little less indifferent to the rent-roll of death than is Cumberland.

While such statistics as we possess cannot be used for all purposes which they were intended to serve, they are probably worth the little money which the State has expended upon their collection. They do not take the absolute measure of any of the causes of death, but they do show the relations of the various diseases to each other, to seasonal influences, to age periods, and to locality.

It is quite unnecessary, if not extravagant, to continue collecting such fractional returns of death and birth, when

slight modifications of the present law would, without increasing the cost, produce full returns.

The present methods are certainly extravagant in one respect, namely, that they make great demands upon the State registrar's time, diverting him from matters of higher and more immediate importance. How much avoidable labor has been involved in collecting the statistics may be guessed after reading an account of the first year's operations of the law.

HOW THE RETURNS ARE COLLECTED.

Local registrars are supplied with two books—one a register of deaths and the other a register of births. Each of these books consists of two hundred pages, admitting seven records on each page, fourteen hundred to each book. They are of a size convenient for storage in an ordinary safe. Transcripts are made in these registers of death and birth certificates in the order of their receipt. There is no alphabetical index.

The blanks for certificates of death are printed on salmon-colored library cards, perforated for filing. The registrars have each a japanned iron guide rod box in which to keep the certificates returned. Before the tenth of each month all of the certificates in his possession are sent by mail to the State Registrar. The birth certificate blanks are printed on white library cards, and are filed, recorded, and returned in the same manner as the "death" cards. These cards are distributed to the local registrar in packages of fifteen or twenty, each package enclosed in an envelope. On the back of the envelope the manner of filling out a certificate is illustrated for the guidance of those whose duty it may be to certify.

Nearly a hundred newspapers come regularly from all parts of the State to the office of the State Board of Health. These are all examined for information bearing upon local sanitary conditions, and especially for death notices. All the essential facts of record contained in the newspaper notes are transcribed to cards, and filed under an index card for the month.

When the monthly returns come in they are compared with this current list of deaths, and duplicates are eliminated. Two lists are then made out and forwarded to each local registrar, one of all certificates of deaths occurring in his sanitary district and reaching us by other routes than through this office, and one of all deaths known to have occurred, but for which no certificates have been turned in. The local registrar is requested to obtain the missing information, and at the same time the State Registrar sends out tracers in pursuit of the legal certificates. A large number of incomplete certificates are placed in a special drawer labelled "Further Inquiry."

For the purposes of "further inquiry," some circular letters had to be devised. The newspaper notices are found to contain most frequently the name of the clergyman officiating at the funeral, less frequently the name of the undertaker, and sometimes the name of the attending physician. We accordingly use a formal letter addressed to undertakers, another addressed to clergymen, and another addressed to physicians. Each of these letters has a device for numbering, that addressed to undertakers being marked U. I., No.—, printed on yellow paper; that to clergymen being marked C. I., No.—, on blue paper; that to physicians P. I., No.—, on white paper. All are printed with copying ink. Thus it is possible to bring together all the papers relating to a given case with relatively little trouble. The purpose of these special inquiry letters is, of course, to reach at last the attending physician, and to obtain from him a proper death certificate.

Every certificate, from whatever source, must be scrutinized in every item which it contains. Those who certify frequently omit such important matters as the date of death, the age, sex or color of the decedent, or else make a statement concerning the cause of death so confusing that a classification of the card is impossible. These matters must become subjects of special inquiry, and it is impossible to devise any formal letter which would apply to any considerable number of these questions. We usually send a letter of inquiry concerning these missing items and enclose a postal card already written, except as to the one or two essential words. When all the necessary information has at last been obtained, the office record now completed, or the original certificate in the handwriting of the attending physician, as the case may be, is put into another drawer marked "Finished Inquiry." The cards containing the information on which the pursuit of the legal record was based are all preserved in a third drawer. Meanwhile, the properly returned certificates are tabulated on the mortality sheets, and then permanently filed alphabetically and by counties. All the cards in the "Finished Inquiry" drawer are kept until another monthly return is made, when, if no duplication of records is found, they are tabulated and filed. The "Further Inquiry" cards represent the certificates of death which have been most expensive to collect. It has several times happened that our tracers have brought us in four or five certificates of the same death at a cost of sixteen cents or more in postage. Nevertheless, this plan has a very good effect in impressing upon persons whose duty it is to certify, the fact that neglect of this duty is not likely to pass unnoticed.

After we have exhausted all the means above described in an effort to obtain physicians' certificates, we have a large number of cards on hand which contain no information beyond that which was contained in the newspaper notices. These have not cost

much to obtain, but they are worthless for all purposes, save mere enumeration. A glance at the chart, which shows the comparative importance of the causes of death, will demonstrate the commanding importance of the column marked "Unknown." This column represents the greater part of those deaths which are reported to us by the newspapers of the State, and shows also what a large part of the work properly belonging to local registrars is done in the office of the State Registrar. Besides the reports represented by this column, the newspaper contributions have swelled the other columns by as many notices as contained either a statement of the cause of death, or some item of information upon which we could press further inquiry till an authoritative certificate was obtained.

It will thus appear that of all the records of death filed in the central office of the State Registrar, quite one-half were begun and completed in the central office, without the aid of a local registrar. If our returns for the period are taken to represent fifty-five per cent. of the actual mortality of the State, it will be seen that of every one hundred deaths occurring seventy-two were unnoticed in the locality where they happened. This poor showing is not due to general neglect of the law, but to particular indifference in certain sections of the State, ascribable partly to the carelessness of the local officers, partly to hostility of boards of county commissioners, and wherever poor results are apparent, to want of popular enlightenment on the subject.

In some portions of the State the local returns have been really far worse than our figures show. Thus the showing made by Carroll County, poor as it is, owes next to nothing to the local registrar. Nearly all of the returns we possess were obtained without the aid of that functionary. The returns from Baltimore County would have been worse than those of Carroll but for the fact that so many bodies from that county are carried through Baltimore City to the places of interment. The Health Department of Baltimore City has made prompt returns of all such death certificates. The returns from Baltimore County owe nothing to the local officers except Dr. C. L. Mattfeldt, who has made almost complete returns from Catonsville and vicinity. The physicians of Baltimore County are as ready and willing to perform their duties as those in Baltimore City, and the Baltimore County Commissioners have needed nothing more than that the importance of this work should be put fairly before them. In these two counties, Baltimore and Carroll, the known character and abilities of the recently appointed local health officers* will bring about substantial improvement in this and other directions.

Allegany County owes nothing to Cumberland. In Cumberland the passing citizen receives no notice save from the press.

*Dr. Stevenson, of Sherwood, and Dr. Foutz, of Westminster.

The town has good sanitary laws, but no discoverable administration. Returns from Frostburg and Lonaconing are complete.

Dorchester enjoys the distinction of making the very scantiest returns among all the twenty-three counties in Maryland. The bad eminence of Dorchester is due to the want of burial ordinances in the thriving city of Cambridge, and there is little reason to hope for early improvement along this line of sanitary work.

The best registration area is found in Cecil County, where all the necessary influences for good sanitary work are found, an intelligent population, a thoughtful, progressive Board of County Commissioners, an earnest and effective local officer.

Calvert County ranks as the next best registration area, and its registration for the present year promises to be more nearly complete than that for the year under consideration. Since Calvert is one of the very sparsely populated counties, the attention paid to registration of births and deaths must, in a great measure, be due to the local registrar's ability to secure and maintain the co-operation of the medical profession.

As a collection of public documents, about half the records on file are of value. Those which are well enough authenticated to be presented in a court of justice as evidence of any of the facts alleged in a death certificate, are of course the records bearing the signature of an attending physician. Half of the records on file would mean about thirty per cent. of all the records obtainable under a good system of registration. As a source of information for the purposes of a private citizen, our registration has therefore attained no more than one-third of a normal efficiency.

It may fairly be doubted whether these fragmentary results are worth the time and labor they have cost. Very probably much of the time spent upon these records by the State Registrar might have been more profitably employed in other official work. If a question concerning the continuance of this system of registration is admitted, it must be upon the ground that part of the cost is avoidable, and not on the ground that the results, even as they stand, are unprofitable. The information received has been fully worth the money it has cost, and if such information could not be more cheaply obtained, the necessary price should be paid rather than abandon the work.

But the laborious and relatively unproductive methods now employed are wholly unnecessary. Ninety-five per cent. of all the deaths happening in the State of Maryland can and should be collected and filed as permanent records, with no greater expenditure of State funds, and with no more cost in labor than has attended the registration work of the past year. To this end it

is only necessary to modify the present law in such a manner as to secure good local registration.

The key to complete registration of deaths is the burial permit. Since all men are everywhere agreed that a dead human body must be disposed of promptly and in some decent way, it is only necessary to attach a legal formality to the act of burial in order to obtain a record of the death at or very near the time of its occurrence. Registration of deaths is not now, and has never at any time or place, been successful without a burial permit. Eighty per cent. of all the deaths occurring in the State of Maryland happen within ten minutes easy transit of a local registrar. A burial permit law applying only to incorporated towns of one thousand or more inhabitants would insure the registration of ninety per cent. of the deaths which annually occur.

For the purposes of the State Board of Health statistics based upon ninety per cent. of the total mortality would be exceedingly useful. Indeed, the remaining ten per cent. might at no great risk be neglected. But the State Board of Health does not wish these records solely for its own purposes. It cannot be too much insisted upon that these records have great and growing value, and that they are of use in a great variety of ways in the conservation of private, as well as public interests. Wherever they have long been established, as in New England and most of the Middle States, in Michigan, in most European countries, they are a source of valuable information, constantly consulted by private citizens, public officials and professional men of all classes. It is not alone the statistical facts which are of use, but the mine of personal information contained in these easily accessible records is of even greater immediate value. It falls well within the limits of probable truth to say that in Maryland every year quite three thousand citizens are forced, in guarding their own private interests, to employ some clumsy and expensive substitute for purposes which these records would serve both conveniently and effectively. A good authority has said that more pension claims fail of successful prosecution through want of proofs of death or relationship than for any other cause. If many just claims fail of right adjudication from this cause it is more than probable that as many fraudulent claims are successfully imposed upon the Government by testimony which authoritative official records would at once disprove.

It must be clear that the material interest which every citizen of Maryland has in a correct system of registration of births and deaths is far greater than the value which the sanitary authorities of the State set upon the records. The *sanitarians* are besieging the Legislature for vital statistics, which are to them the balance sheets showing what head, if any, they make against disease and death. The *people* need for their own and different purposes the records upon which these statistics are based.

The State cannot, therefore, neglect the ten per cent. of deaths which occur outside of incorporated towns and cities, and must for equal justice to all her citizens make record of at least the two most important events in the history of every individual.

To illustrate the value of these records, aside from their hygienic uses, I offer some figures obtained from some of the important cities operating registration offices:

In Boston no accurate account is kept by years, but the clerk of the Registry Department says that in 1898 about 5,200 copies of records were called for.

Washington, D. C., has records covering a very few years; yet the citizens asked for and obtained in the fiscal year 1898-1899 copies of records for the following purposes:

Insurance claims	143
Pension claims.....	274
Evidence in court and otherwise.....	92
To be sent to foreign countries	18
<hr/>	
Total.	527

St. Louis has had a registry department for only a short time. Copies of records were asked for in 1898 to the number of 880; copies of birth certificates, 64; of death certificates, 816.

In New Orleans in 1898, 887 copies of vital statistics records were asked for by citizens.

In Philadelphia, during the same year, 7,430 copies of records were asked for:

Insurance claims.....	1,329
Pension claims.....	1,389
Other uses.	4,712

The Registrar of Vital Statistics of Chicago replied to our inquiry that in 1898 no record was kept of the number of copies of record asked for. The uses to which they were put were insurance claims, pension claims, evidence in court, to be sent abroad, and in settlement of estates. The vital statistics of Chicago are not of many years' standing. About four years ago more than a thousand copies of these records were asked for by citizens.

In New York, in 1898, the total number of copies of records of births and deaths obtained by the citizens was 18,735. No account was kept of the purposes for which these transcripts were used. Including the marriage records there were 21,124 searches made.

These figures certainly show that official records, such as we desire to make primarily for their use in sanitary work, have a different and perhaps an equal value for the private purposes of

citizens. It is evident that if the records of New York were destroyed, the sense of personal loss would touch more than 20,000 persons within a year, and would affect an equal number of citizens in each of many succeeding years.

The bill, which was originally offered at the last Legislature, contained the following two sections, which are not found in the law,

Section 6 B in the original bill was as follows:

"Each local registrar shall have power to appoint competent persons, to the number of not more than one for each election district in the registrar's jurisdiction, to act as sub-registrars. Such appointments shall be made so as to suit the convenience of each locality, shall be certified in writing, and shall be recorded in the office of the State Registrar. Such sub-registrars shall be duly sworn to the faithful performance of their duties, and their term of office shall not extend beyond the term of office of the appointing registrar. Each sub-registrar shall be authorized to make all such records and to issue all such certificates and permits as are made and issued by the local registrar, and shall, in the first five days of each month, send to the local registrar the originals of all certificates, records and permits remaining in his possession on the last day of the preceding month."

Section 6 E of the original bill provided that:

"No interment of any dead body of any human being, or disposition thereof in any tomb, vault or cemetery, nor any embalming process, or injection of any preservative substance, shall be made without a permit as aforesaid from the registrar or sub-registrar of the district where said person died, or otherwise than in accordance with such permit. The application for a burial or removal permit, together with the statement of facts required therein, shall be signed by a relative, friend, householder, manager of the institution upon whose premises the death occurred, or by any competent person acquainted with the facts. The certificate of death shall be signed by the physician last in attendance upon the deceased person, (or by the health officer or coroner, in case of death without medical attendance or of sudden or violent death). It shall be the duty of the undertaker or other person in charge of the burial or removal of the body of any deceased person whose death occurs in any registration district of the State, to obtain the application for burial or removal permit, with the certificate of death, file the same with the registrar in whose district the death occurred, and obtain the proper burial or removal permit based thereon from the registrar prior to the burial or removal of the corpse, and it is hereby made the duty of the attending physician, in attendance upon any person who shall die, to leave with the family or at the home of the deceased, a certificate setting forth the cause of such death, which certificate shall, by the said family or friends of the deceased, be given to the undertaker, in order that he may obtain from the registrar the proper burial or removal permit. And it shall be the express duty of the registrar to see that the law governing the issue of burial and removal permits is strictly complied with, that all personal and statistical information, required on the blank applications, is fully supplied, so far as it is possible to obtain the same with reasonable effort, and that a clear and distinct statement of the cause of death, so far as known, is made by the certifying physician. In case of doubt in regard to the return of a cause of death, or if a vague or ambiguous statement is made under that head, the registrar, before granting a permit, shall immediately refer the application to the health officer or coroner, who shall investigate and report the

facts over his official signature; provided, that in case of an investigation of an unsatisfactory return, the registrar may issue, in his discretion, when it shall appear that death resulted from natural causes and not from unlawful means, a temporary permit allowing burial or removal, which temporary permit shall be cancelled by regular permit issued in due form upon the completion of the proper return; and provided, further, that in case of death from any contagious or infectious disease, said certificate shall be made and forwarded immediately."

For Section 6 B, the following was substituted and became a law:

SEC. 6 B. All physicians shall be sub-registrars of vital statistics, and shall be authorized and required to make all such records and certificates as are made and issued by the local registrar, and shall in the first five days of each month send to the local registrar all certificates and records made during the month next preceding.

This makes all physicians State officials, imposing upon them duties which they do not desire and cannot be made to perform. Section 6 B, as it originally stood, would have secured the attention to this important business of a small number of competent men who, taking up the work after formal qualification, could have been held responsible for the mortality returns of their districts.

It would be quite practicable to give this duty of registration in small rural districts to justices of the peace, and so avoid the multiplication of officers. The justices are at least as well qualified for this small clerical work as for coroner's duty.

Section 6 E contained no provision which will not eventually become the law of the State. Objection was made to the stringency of the regulations imposed upon undertakers. Indeed, it is quite customary in Baltimore City for undertakers to complete all the work of preparing a body for burial before seeing the certificate of death or applying for a permit to bury. The Legislature did not seem to be impressed with the view that under such circumstances neither the manner of death, nor even the fact of death is known to the undertaker upon any other authority than his own observation and the representation of the friends who are unknown to the undertaker. Under such circumstances murder may have been committed, and the crime may be effectually concealed by the undertaker. Instances in which murder by poison has been done, and conviction of the criminal rendered difficult or impossible by prompt embalming, are quite numerous. How many cases of the same sort have been successfully and completely concealed can only be conjectured.

In the rejected section (6 E) the householder or nearest friend was required to state certain of the essential facts concerning the deceased person. This is right, because such facts should be certified by the person to whom the facts are personally known,

rather than by a person who must give these statements at second hand.

Objection was also made to the very express injunction upon the local registrar to collect all the essential facts before issuing a permit, and to issue no permit upon vague or ambiguous statements, allowing him in certain cases only the discretion of a temporary permit, pending the completion of the regular certificate. These requirements do not seem rigorous. They are details which the faithful officer will attend to without special admonition, but if the law does not insist upon this scrupulousness, careless or unsuspecting health officers may unwittingly contribute to a great deal of dangerous petty crime, and to some crime of great gravity. Still, since this rejected section of the bill was distinctly more rigorous than the present local law for Baltimore City, it is not surprising that it was looked upon unfavorably. These provisions are, however, a part of the law of the best registration States. If it had been passed as it stood, one item of some importance in connection with the certification of deaths would still have been lacking. I mean the verification of deaths.

In this State, out of every ten deaths certified to by a physician in private practice, not more than one is certified upon the positive personal knowledge of the physician that death has, indeed, occurred. The physician usually believes that death has taken place, because death was expected, and he certifies upon information from some member of the family, or perhaps upon the information of a messenger who never saw either the person said to be dead, nor the physician to whom the message is delivered. In such cases, those who send such a message are usually reporting, to the best of their inexperienced knowledge, that the event expected has come to pass. It is hardly safe to accept in all cases such statements as the basis for the disposal of a body that possibly may not be dead. It is, of course, extremely unlikely that innocent error will ever arise from failure of the physician to verify the death before making a certificate. But the ready acceptance by physicians of such information and their habit of immediately certifying, whether the alleged event was expected or unexpected, may undoubtedly open the way for gigantic fraud, and American life insurance companies have recognized the danger of such conspiracies.

While these rejected provisions of the bill proposed at the last Legislature are desirable, they are not all indispensable, and might have been lost without great regret, if it had been possible to save that one provision which is indispensable. The present law would become effective if the following were added to Section 6 E of the Act:

"No interment of any dead body of any human being, or disposition thereof in any tomb, vault or cemetery, shall be made without a permit

from the registrar or sub-registrar of the district where said person died, or otherwise than in accordance with such permit. It shall be the duty of the undertaker or other person in charge of the burial or removal of the body of any deceased person whose death occurs in any registration district of the State, to obtain the certificate of death, file the same with the registrar in whose district the death occurred, and obtain the proper burial or removal permit based thereon from the registrar prior to the burial or removal of the corpse."

This brief and simple amendment to the law will insure the collection of correct records of deaths in ninety-five per cent. of all instances.

The testimony of local health officers, found in later pages, is repeated here in connection with this subject.

"I find that I have registered 357 births and 128 deaths, hardly half of the number of each that have occurred.

"I think that there should be a burial permit section inserted in the Registration Law, making it imperative that the certificate pass at once under the scrutiny of an official before the body can be interred."

C. H. BRACE, M.D.,

Health Officer for Allegany County.

"The correct estimating of the relations between births and deaths, or, in other words, the relative increase or decrease in the population of the county depends upon the completeness of these records.

"In order that these records may be complete, I suggest that the next Legislature be asked to add a section to the law providing for a burial permit, and make it unlawful to bury a body without a permit from the health officer of the county. This system is in use in Baltimore City, where all burial permits are issued by the Health Commissioner."

H. BURTON STEVENSON, M.D.,

Health Officer for Baltimore County.

"I am in favor of passing a law requiring all doctors to give a burial permit throughout the State.

"I also am in favor of all births being required reported under penalty of the law.

"I also think all health officers should be paid at least twenty-five cents for recording births and deaths."

JOHN SWOPE MATTHIAS, M.D.,

Health Officer for Carroll County.

"The majority of the physicians report births and deaths promptly but much value is detracted from this good work by the derelicts who send in late and incomplete reports. The above statistical report of deaths is not full. We have endeavored to make it so by letter and personal solicitation, but it is impossible for one health officer in a county to get a full report without the cheerful co-operation of the physicians.

"A burial permit should be required in all cases of interment. It should be issued upon the presentation of a proper certificate upon which the physician should write in the cause of death, after the other data are collected by the family or the undertaker."

HOWARD BRATTON, M.D.,

Health Officer for Cecil County.

"I have forwarded to you all the death and birth cards I have received from physicians in the county, and very few physicians pay any attention to this law. I think a very wise plan would be to have an officer to whom persons should be compelled to apply before burying their dead. I know of persons having been buried in this county with highly contagious diseases, and the same was never reported to the health officer and no attention was paid to the matter whatever. People innocently went to the funeral without knowing the danger they were running in doing so."

C. L. CECIL, M.D.,

Health Officer for Charles County.

"It is my opinion that the reporting of births and deaths should be made compulsory and paid for by the State. If, as is justly claimed, vital statistics is of such great importance and value to the State, why not have a general State law, uniformly fixing the salaries of health officers in the counties, according to the size and population of the same, and paid for by the State? Now the health officers, who are expected to go from one part of the counties to the other, depend upon the various Boards of County Commissioners, who, in many cases, know nothing and care less about health officers."

GEO. P. JONES, M.D.,

Health Officer for Dorchester County.

"Owing to the unsatisfactory registration of births and deaths in Frederick County, I regret exceedingly my inability to make out a statistical report that would prove of any practical value to your Honorable Board. Since a current account of deaths, with special references to causes, is a matter in which all sanitarians are deeply interested, this is most unfortunate.

"That you are entirely familiar with the defects in the Registration Law as it now stands, and that you will call special attention to the same in your report I have not the slightest doubt, since your experience must have convinced you that without a burial-permit section added to the present law it will remain practically valueless. To be effective, said permit must be made a necessary preliminary to the disposal of the dead body. Such permits would naturally be made out at the time and place of death in the presence of the family, who could give any information desired. It would rapidly follow the event, its importance would be more fully recognized and its prompt return greatly facilitated—all of which are essential. It is simply the key to the situation in the rational solution of the whole question. Returns to be of any practical value must be prompt, full and accurate.

"One other cause of the failure in the registration is the lack of adequate compensation. The State is fully able to pay for all services faithfully performed by her citizens. You cannot expect efficient service without adequate compensation. There should be a uniform fee commensurate with the intelligence required, as well as the actual labor performed. It is unreasonable to expect the Registrar of Births and Deaths to perform his duties gratuitously, and as I plainly stated in my report to the County Board, I seriously question the legality of the Act which would compel them to do so."

DAVID M. DEVILBISS, M.D.,

Health Officer for Frederick County.

"So far as vital statistics are concerned, I have sent to you, from time to time during the year, all that have been reported to me. I am aware that the reported births and deaths fall far short of the total in the

county. I believe a burial permit section in the registration law would have a good effect in securing death reports throughout the county and smaller towns.

"A *fair compensation* ought to be allowed local registrars for work of recording the certificates. It is only a simple business question as to how much it should be."

W. H. RAVENSRAFT, M.D.,
County Health Officer for Garrett County.

"In reference to the "vital statistics" law, it is impossible to get anything like a full return.

"I think a registry law requiring a burial permit from the health officer of the city or county, to be given upon receipt of a certificate from the doctor attending the case; the undertaker to give the blank to the family to be filled by the doctor, and then taken to the party designated by the health officer and a burial permit obtained, the undertaker inclosing them to the health officer. This would at least give full returns of deaths."

THOMAS B. OWINGS, M.D.,
Health Officer for Howard County.

"The establishment of a bureau of vital statistics, with branches in the counties, has not during the past year resulted as I hoped. The value of vital statistics is unquestioned. That they should be full and complete is necessary—to get them so requires more stringent laws.

"A committee (I am a member) was appointed at the last meeting of the Maryland Public Health Association to urge the passage of a law by the Legislature at its next session, requiring the possession of a burial permit issued by the Secretary of the local Board of Health before a deceased person can be buried, and making it unlawful to fail to comply. This would compel the doctors to at once report the death to the Secretary, also would make the undertaker unable to carry out his work without such a certificate. Such a law would entail a greater amount of clerical work on your Secretary, but would surely accomplish its purpose. This is no new thing, as all the cities have such a law."

W. FRANK HINES, M.D.,
Health Officer for Kent County.

"There is but one way to insure immediate registration, and that is to forbid any disposition of a dead body until a proper record is returned. The burial permit is the key to prompt registration, and without it no vital statistics law can be economically operated.' I sincerely hope that the next Legislature will make such provisions in an amended law.

"Another important detail is the fair compensation of local registrars for the work of recording the certificates. I think a fee of fifteen cents for each complete record made is little enough remuneration."

E. E. STONESTREET, M.D.,
Health Officer for Montgomery County.

"While a majority of the physicians of the county have manifested a willingness to comply with the vital statistics law, I still have abundant reason to regret, and even to complain, of an incompleteness along this line that must render our statistics unreliable, if not actually misleading: yet I am gratified to note some improvement touching this important matter within the past year.

"Why could not one element at least of the defect be remedied at the coming session of the Legislature? What would better accomplish this

than a section requiring a burial permit? This would insure fuller and more prompt reports. This feature of the law might be very properly corrected, as well as the inadequate compensation received by a local health officer throughout the State."

JAMES BORDLEY, M.D.,
Health Officer for Queen Anne's County.

"The undertaker should not be allowed to bury any body unless he has a death certificate, properly made out by the attending physician, and that would compel some member of the family to go to the physician's office and get the certificate before burial would be possible."

L. B. JOHNSON, M.D.,
Health Officer for St. Mary's County.

"In my opinion the State should either improve the law requiring the registration of births and deaths or abandon it. The operation of the law reveals two classes of physicians—one yielding acquiescence to the request of the State for information which shall furnish an accurate birth and death rate, as well as establish the comparative prevalence of fatal diseases; the other, ignoring the law and withholding information absolutely essential to the construction of vital statistics, which shall truthfully represent conditions in Maryland, and as contemplated by the law. The failure of these delinquents nullifies the faithful work of others, and renders the returns of little or no value."

J. MCP. SCOTT, M.D.,
Health Officer for Washington County.

"There is urgent necessity for a burial-permit section to the Registration Law. We hope for a favorable consideration of this matter at the ensuing Legislature."

CHAS. P. JONES, M.D.,
Health Officer for Worcester County.

"Perhaps the best way to obtain full and prompt reports of deaths (the need of which I would particularly emphasize) would be the incorporation of burial-permit section in the Registration Law."

WM. S. WELCH, M.D.,
Health Officer for Annapolis, Md.

"The system of reporting and recording deaths and infectious diseases is working to our complete satisfaction. The burial permit contributes largely to the completeness of the death returns; in fact, we might say it is the key to the whole matter. Our local ordinance forbids the burial or removal of a body without a permit, and the result is such that we would recommend its adoption throughout the State."

H. S. HEDGES, M.D.,
Health Officer for Brunswick, Md.

"To obtain a complete record, no body should be removed from the location where death took place without a permit from the local health officer or registrar, and I sincerely hope that such a provision will be added to the present vital statistics law. If such a law is enacted at our next Legislature it will be of great benefit both in accurate collection

and recording of death certificates and the reporting of contagious diseases."

CHAS. L. MATTFELDT, M.D.,
Health Officer for Catonsville, Md.

"The proper collection of mortality statistics would necessitate the enactment of a law providing for the issuance of a burial permit for every death occurring within the State. An official could be designated to act in such capacity even in the most sparsely settled portions of our State, and that, too, without cost. If Maryland desires to take rank among the progressive States some action must be taken by the Legislature, such as the enactment of a general burial-permit law."

C. F. GOODELL, M.D.,
Health Officer for Frederick City, Md.

"The need of a burial-permit section in the Registration Law is very evident."

H. S. WEUSTHOFF, M.D.,
Health Officer of Havre de Grace, Md.

"One of the most important things to my mind is the need of a burial-permit section in the Registration Law, and it is essential that we get such a provision into the law at the next Legislature. A very necessary detail is a fair compensation of the local registrars for recording certificates. A fee of twenty cents for each complete record is little enough for the counties and small towns of Maryland."

A. SHELMAN WARNER, M.D.,
Health Officer for Highlandtown, Md.

"Our health ordinance provides that no human body shall be buried without a permit from the town clerk. This and other restrictions connected with the burial and removal of dead bodies has helped to teach the people to be more careful about needless exposure at funerals in case of death from contagious disease. The ordinance was well received, and has rendered valuable assistance to our undertakers and ministers in conducting funerals. A State law, with similar provisions, might well be enacted."

JAMES O. BULLOCK, M.D.,
Health Officer for Lonaconing, Md.

Another section of the law which needs amendment is Section 6K. It will be observed that no compensation is provided for the performance of the duties imposed by this act upon local registrars. In older registration States the usual fee for recording a death is twenty cents. This small fee will prove no burden upon any county in the State. Wherever a single registrar makes the records for a population of one hundred thousand or over, it will be wiser to pay a stated salary for the work of the local registrar. For any less number of people it will be more economical to pay a fee of twenty cents for each certificate recorded by the local registrar. The amount of money expended in each county for recording deaths may be estimated by multiplying the estimated population of the county by 36, and striking out the last four figures. Applying this to the population

of the State, outside of Baltimore City, it will be found that \$2,400 will fully cover the fees for records of death in a year, even if such large towns as Cumberland, Hagerstown and Frederick should pay their registrars by fees. These figures are obtained by assuming the death rate in the counties to be eighteen per thousand persons living. This is a liberal estimate of the death rate, since that for Baltimore City, which should be higher than that of the rest of the State, is about nineteen per thousand. No argument whatever should be needed in favor of so insignificant a tax upon the twenty-three counties of Maryland.

RESULTS OF THE VITAL STATISTICS LAW DURING ONE YEAR.

There are on file at the office of the State Board of Health cards representing 6,721 deaths which occurred between July 1st, 1898, and June 30th, 1899. During the same period, certificates of births were received to the number of 5,586. If we subtract from the number of death cards those which have no other basis than a newspaper notice there will remain 5,041, which would give as an apparent ratio of births to deaths five and a half to five. If another correction were made on account of the fact that reports of individual deaths are directly pursued by the State Board of Health, while the reports of births are sent in solely on the volition of the reporter, we shall find that the figures represent a ratio of about eleven to nine. It is not by any means intended to offer such a ratio as the demonstrable ratio of increase of native population. The figures merely indicate a balance in favor of growth. It has always been the experience in early years of registration that far more births than deaths escaped record, and so no doubt it has been in Maryland.

The certificates of birth are roughly divisible on the line of color, but it has been thought better not to enumerate colored and white births separately, since the reports of white births have certainly been a far greater proportion of the births actually occurring.

Similarity with respect to deaths, a separate enumeration for each race would give misleading results. Our sources of information are more accurate as to deaths among the upper social classes.

A diagram is here shown of the deaths for the year ending July 1st, 1899, divided according to causes of death. If the column marked "unknown" is disregarded, the diagram shows that the causes of death in this State stand in about the same relation to each other as in the States operating more perfect plans of registration.

The "unknown" column consists almost entirely of deaths for which we have been unable to obtain authenticated certificates. This column represents the deaths of citizens who were of sufficient importance to secure their notice in the newspapers, but whose means of taking off were not harrowing enough to be of news interest. The newspapers have enabled us to confer unmerited distinction upon violent death. The accident, suicide and homicide columns occupy higher rank than they should.

The diagram showing deaths by ages shows marked deviations from the ordinarily observed mortality at different periods of life. This diagram is not, however, to be interpreted at all. We have no means of ascertaining the number of persons living at the various ages, and without this factor no safe reasoning can be based upon the deaths charged to each period.

One preventable disease (or class of diseases) is strong enough to thrust itself into prominence in this diagram. Infantile diarrhoea creates the havoc which gives the column of deaths under the age of 2 its gloomy eminence, and perhaps will indicate to thinking men that measures designed to cut down this item of avoidable loss would yield some profit to the State. This diagram is, however, of little interest just now.

No. II.

Total mortality from July 1, 1898, to June 30, 1899, classified by age-periods.

The next diagram shows the relation between the death rate of each county calculated upon a basis of seventeen per thousand of the estimated living population and the reported death rate. A death rate of seventeen per thousand as the older registration States show outside of large cities, and is probably higher than the actual death rate in Maryland. A glance along the row of columns will show how far short each county has fallen of correct returns.

No. III.

Showing the proportion of deaths reported in each County on an assumed death rate of 17 per thousand of population living. Black columns show the death rate as derived from the actual returns of death. The Counties of Maryland arranged in order of population are: Baltimore, Frederick, Washington, Allegany, Dorchester, Carroll, Anne Arundel, Harford, Cecil, Montgomery, Prince George, Kent, St. Mary's, Talbot, Wicomico, Queen Anne, Somerset, Worcester, Howard, Charles, Caroline, Garrett, Calvert.

The next diagram shows how the twenty-three counties would be ranged according to the actual number of deaths reported.

No. IV.

Counties in the order of the number of deaths actually reported.

The counties of Maryland follow each other in order of population as follows: Baltimore, Frederick, Washington, Dorchester, Allegany, Carroll, Anne Arundel, Harford, Cecil, Montgomery, Prince George's, Kent, St. Mary's, Talbot, Wicomico, Queen Anne's, Somerset, Worcester, Howard, Charles, Caroline, Garrett, Calvert.

Comparing this list with the diagram, Allegany is found ahead of Washington. This is due to the burial permit ordinances of Frostburg and Lonaconing. Cecil is found in the place which belongs to Dorchester, Dorchester being ten numbers behind its proper rank. Harford is in the place which belongs to Carroll, this change of place not being due to good administration in

Harford. Anne Arundel has its proper rank, and since Annapolis has now a burial permit ordinance, the county will next year probably appear well ahead of its rank by population. Queen Anne's, through good administration, appears where Montgomery should be. Prince George's is two numbers and Talbot three numbers ahead. Kent and Wicomico are in their places. Garrett, Caroline, Calvert and Worcester are each ahead, while Somerset, St. Mary's and Charles are behind their proper positions. Howard has the rank which belongs to the larger county, St. Mary's.

No. V.

Mortality from July 1, 1898, to June 30, 1899, classified by months.

The diagram showing deaths by months is inserted here chiefly for the interest it will have for comparison with future observations, which it is hoped will follow the seasonal tide of disease and death. The growth of the observance of the law may be fairly traced by this diagram. July represents the very first attempt to assemble one month's returns of deaths in Maryland. No July ever marked the low tide of death. July, August and September are the months when babies die. Our returns, however, were increasing chiefly because information concerning the law was spreading. Typhoid fever was busy in September, October, November and December, but the drop which occurred in October is probably due to the political campaign which diverted the attention of the newspapers from the campaign of death. The towering height of January, 1899, owes something to La Grippe and pneumonia, but more to the dearth of news in county towns, and perhaps still more to a tour among the undertakers made by Mr. Inspector Chas. N. Mitten.

The decline from January, 1899, to June, 1899, is normal in direction, and from February on about normal in degree.

The year's losses from preventable diseases are shown in the next diagram, and for the purpose of comparison the chart of

No. VI.

Comparative mortality from preventable diseases, July 1, 1898, to June 30, 1899. (*Cancer not properly included.*)

this first six months of this period is reproduced from the last report. Tuberculosis is seen to have maintained its pre-eminence. Influenza and pneumonia having received their winter accessions, assume greater importance in the chart for full twelve months. Typhoid fever subsided during the winter only far enough to be surpassed by pneumonia. The losses inflicted by diphtheria in the six months after January 1st were

about equal to those of the preceding six months. Whooping cough and measles destroyed more life, and scarlet fever less life, in the second six months.

No. VII.

Mortality of the principal preventable diseases in the last six months of 1898. (From the report of 1898.)

Local Boards of Health.

When the last report was written there were forty local boards of health in the State, twenty-two county boards and eighteen town boards of health. Since then but two new boards of health have been organized. Somerset County has at last a board of health, having as its Executive Officer Dr. Martin W. Goldsborough, of Princess Anne. Hagerstown has also organized a municipal board of health with Dr. T. W. Simmons as Executive Officer. Thurmont, in Frederick County, made an effort to organize a board of health, but is not known to have completed this endeavor.

The Olney Board of Health, in Montgomery County, one of the oldest and most earnest boards in Maryland, has had its usefulness much impaired by a very curious legal technicality. The Act which created this board of health was omitted from Poe's Code of Public General Laws, probably for the reason that this Act is a local law. The Act was at no time repealed either expressly or by implication in the terms of any subsequent Act, but having once appeared in Poe's Code and having later been omitted from that book, the legal adviser of the County Commissioners of Montgomery County held that the law had ceased to exist and that the Commissioners were not authorized to levy any sum for the maintenance of that board. This may be law, but it is not common sense. On the contrary, it seems to the unsophisticated mind to be uncommon nonsense. Such a view, if it had been reasonable, would have seemed most dangerous to any fair-minded guardian of public safety, and an immediate effort would have been made to repair the damage which such a view entailed. Certainly no intention or desire to stop the work of this board was apparent anywhere outside the office of the County Commissioners. This extraordinary view may have been held for some other reason than that such a view was desirable, but no good result of any sort followed this ruling except the saving of money to the county treasury. The Olney Board of Health paid no salary to any one. It looked after the sanitary welfare of a very enlightened and orderly farming community and sometimes expended as much as twenty-five dollars in a year. The utmost saving possible by destroying this local board of health was the price of fifty circus tickets.

The Hagerstown Board of Health collects information concerning the occurrence of infectious disease and transmits the same to the State Board of Health. If other local boards of health would notify the State Board promptly, giving the post-office address of each infected family, it would be possible for the State Board to send short communications instructing exposed persons concerning the simple means of avoiding infection. These communications, arriving at a time when their

contents would possess immediate personal interest, would be carefully read and the instructions would be practiced. Popular education, which is perhaps the most important work of a State Board of Health, could be pushed forward by this means most rapidly. The distribution of circular literature among persons who are not aware of any impending danger is not likely to have any lasting effect, but the distribution of circulars definitely adapted to an actual and existing condition is sure, by reason of its timeliness, to make an enduring impression.

The Annapolis Board of Health has made an important step forward during the year. A burial permit ordinance has been passed, so that all deaths occurring in that city are recorded at the time of their occurrence. It seems surprising that this town, one of the oldest in the State, and the town of great historic interest, should have had no such records hitherto. This deficiency was in fact so surprising to the recently elected Mayor, Mr. Seidewitz, that he insisted upon its immediate repair.

There are now in Maryland seven towns besides Baltimore which attempt to insure the immediate registration of all deaths by requiring a burial permit in every instance. They are Annapolis, Brunswick, Cumberland, Frederick, Frostburg, Hagerstown, Lonaconing.

In Cumberland, as has been elsewhere remarked, the burial-permit ordinance is neglected, so that the registration of deaths in that town is not so good as in the sparsely-settled and remote communities. All the other towns mentioned are completely successful.

As to the organization of county boards of health in general, it may be said that the system practiced in this State is not a good one. There are very few men on the boards of county commissioners in Maryland who have ever given any consideration to matters of public health, and when the subject is brought to their attention they usually treat it as if the business of sanitation were something to be postponed entirely until some unlikely emergency occurs, and even in the presence of an emergency they are unwilling, as a rule, to make any except temporary provision for the defence of public health.

In some counties the position of health officer is one of the petty political plums. The tenure of office is but one year, and it is sometimes the desire of those making the appointment that the health officer shall do as little as possible. The health officer who does no sanitary work whatever, provided he does not abstract any very considerable sum of money from the public funds, is on the whole the most satisfactory public functionary.

There are a few county boards to whom public health is an object of some importance, and to whom the representations of conscientious health officers are made with good effect; but, excluding health officers, there are not in the State, among all the county boards of health, five men who know the principles of

public hygiene. It is from medical men that a proper appreciation of this subject is to be expected, and while it is undesirable that boards of health should be composed exclusively of medical men, every board should have more than one medical member. At least two men selected for their special fitness should be upon every board of health. One member of the board of county commissioners, one member of the school board, with two reputable physicians, appointed by the Governor of the State, or by the Judge of the Circuit Court, would, after completing their organization by the choice of an executive officer, make a good local board of health. There is certainly need of some sort of organic union between the State and local boards of health. If the choice of an executive officer were made subject to confirmation by the State Board of Health, a reasonable guarantee of efficiency would be secured. In some States the State Board of Health has the power to appoint and to remove local health officers. Here in Maryland that is neither necessary nor desirable.

All local boards of health should be visited several times a year by some representative of the central board of health. In that way the State Board of Health would be enabled to cooperate more intelligently with local boards, and those local officers who are doing their best would be sure of support and encouragement. On the other hand, no better check can well be placed upon indifference, incompetence or malfeasance than the certainty of publicity.

An examination of the reports of local health officers will show measurable improvement in most of them. At least there is no local board of health in the State which seems to call for severe criticism. Last year there were two which deserved unmeasured denunciation. There are still one or two silent boards of health. No harm is known of these dumb devotees of Hygeia. They are probably worth all the nickels bestowed upon them by the communities which maintain them.

If we might select a few of the good local reports in order to show why they are good reports, perhaps the Counties of Washington, Frederick, Cecil, Kent and Queen Anne's may serve that purpose. It is fair to say that of these Washington and Cecil have the best reports. Why? Because they represent better organized work. Besides competent and earnest executive officers these counties have boards of commissioners intelligent enough to appreciate and support the sanitary work of their officers.

In Washington County the county officer receives reports upon certain sanitary matters from fifteen vaccine physicians. These extra duties were laid upon the vaccine physicians at the suggestion of the county officer, and the result is that Washington County is not only the best vaccinated county in the State,

but is perhaps also the best informed county at all times as to her general sanitary condition.

The health officer of Cecil County has no such aids. He has, however, a Board of County Commissioners who meet once a month as a Board of Health, and give honest consideration to the reports of their executive officer. There are no town boards of health in Cecil, and no district health officers of any sort, so that the information conveyed in the report from that county owes little to any other influence than the vigilance and energy of one man.

The report from Frederick contains nothing to indicate that any real organization of the County Commissioners as a Board of Health has been effected. The chief towns, Frederick City and Brunswick, have their own local boards, so that the county officer is chiefly concerned with rural hygiene, and apparently he is permitted to prosecute his work quite unaided. Under such circumstances it is impossible that his report should contain the circumstantial evidence of continuous effort which appears in the reports from Cecil and Washington Counties.

In Kent and in Queen Anne's the County Boards of Health are in effect the executive officers. There is no town board of health in either of these counties, and no means of systematic communication concerning prevailing sickness exists in either. These counties, therefore, owe whatever distinction they obtain in a sanitary way to the personal power and influence of their health officers, rather than to official qualifications or organization.

In all five of these counties the reports indicate an amount of work which is not adequately paid for, but the five health officers are not equally underpaid. Arranged in accordance with the money spent on sanitary work Washington stands first, Frederick next, then Cecil, and Kent and Queen Anne are equal.

These considerations perhaps show that an effective organization of a local board of health under the present law on the subject requires first the selection of a superior medical man as executive officer, and next, on the part of the commissioners, sufficient intelligence to appreciate the suggestions of their medical adviser, and independence enough to put them into practice.

So long as county commissioners are chosen by the people without the slightest consideration of their fitness to regulate the sanitary affairs of the county, it must be pure good luck if any county has a board of health which deserves to be called good.

List of County Health Officers.

NOTIFICATION OF INFECTIOUS DISEASE.

The law upon this subject has been fairly well operated in some of the counties of Maryland, and in all the counties it has been about as well administered as are the other laws of public health. Some of the town boards of health have the full and hearty co-operation of practising physicians, and prompt information is obtained of every appearance of the notifiable diseases. The boards of health in Frederick, Brunswick, Lonaconing and Hagerstown are probably as fully informed at all times concerning the presence of infectious disease as is the Health Department of Baltimore City. The newly organized Health Board of the City of Hagerstown regularly returns to the State Board of Health all the notices of infectious disease which are received in the course of each month. These notices contain the address of all infected houses, with the names of the householders. Information of this sort can be turned to great practical account by the State Board of Health, and it is very desirable that all local boards of health should make the similar returns. Throughout Washington County the notification act is well observed in respect to diphtheria, scarlet fever and measles, the common diseases which are best restricted by easy means.

A CONVICTION FOR FAILURE TO NOTIFY SMALL-POX.

On the morning of the eleventh of May information was received that two cases of supposed small-pox had been sent from Sparrow's Point, in Baltimore County, to the Baltimore City Quarantine Hospital as private patients, paid for by the Maryland Steel Company. Inquiring at the City Health Department, it was learned that a report from the Quarantine Hospital gave the name of the last patient as Egbert Thrower, admitted May 8th, and it was stated that the physician to the Maryland Steel Company informed the quarantine officer that the case had been reported to the health authorities. No notification of this case having reached the office of the State Board of Health, written inquiries were at once sent to the local officers in Baltimore County, and they were also interrogated by telephone. But one officer was reached by telephone, Dr. C. L. Mattfeldt, who was on that date the acting health officer for Baltimore County, who replied that he was ignorant of the existence of any infectious disease at Sparrow's Point, having received no notification of any sort from any physician at that place. Later, letters were received from all three of the local officers stating that no notification had been sent.

The eleventh of May happened to be the date of the regular monthly meeting of the State Board of Health. The above facts

were reported to the Board, and the Secretary was instructed to investigate, and if the facts showed that a case of small-pox occurring at Sparrow's Point had been recognized by the attending physician and had not been reported to the health authorities of the county or State, to cause the arrest and punishment of the physician so delinquent.

Late in the afternoon of May 11th the Commissioner of Health of Baltimore City informed the Secretary of the State Board of Health that Dr. E. G. Welch had sent a notification to the Department that a colored man, one Jackson, an employee of the Maryland Steel Company, had just been at his office for medical advice, having then small-pox in the stage of eruption; that said Jackson had returned to Sparrow's Point, and would, on the following morning, be in Baltimore again. The Secretary of the State Board of Health went to Sparrow's Point on the first morning train for the purpose of finding and isolating this patient, and to discover, if possible, the existence of other cases. The physician of the company was seen, and he expressed great surprise that the presence of small-pox in that community, if true, should be known in Baltimore before it was discovered by himself. By consulting the pay-roll we were enabled to locate the man Jackson. He was found in a compartment of a series of barracks occupied by the lowest class of labor employed by the company. There were three other colored men occupying the same room. Jackson was sent to Quarantine Hospital. This part of the shanty was ordered shut up until it could be disinfected. The other three colored men were to be isolated and kept under observation until the period of incubation of the disease had passed.

Mr. Wood, superintendent of the Company, gave a ready assent to every suggestion for the prevention of further spread of the disease, and from that time forward co-operated with and assisted the health authorities in the work of suppressing the disease.

On the following day the Secretary of the State Board of Health revisited Sparrow's Point in company with Dr. Stevenson, Health Officer for Baltimore County, to arrange for general vaccination. While there it was discovered that the room from which the man Jackson had been removed had not been shut up, nor the exposed persons in any way isolated. One of them was sick, the eruption just appearing. We were informed there was a suspicious case, probably small-pox, in that part of the town known as "The Island." This case was visited by Dr. Stevenson. On Sunday, the 13th, while vaccinating from house to house, three cases of small-pox came under the observation of the Secretary, one of whom was dropping the crusts and must, therefore, have been more or less sick for about three weeks.

This patient claimed to have been visited by the company's physician and to have been treated for eczema.

The other facts concerning this outbreak of small-pox may be found in the report of the Health Officer for Baltimore County, Dr. Stevenson. These circumstances are mentioned here in connection with the prosecution of the company's physician for failure to report the case of Egbert Thrower, who was sent to Quarantine Hospital on May 8th.

A warrant was sworn out against the physician for violating Section 34B, of Article 43, of the Code of Public General Laws, before Justice Wm. Leyshon. The preliminary hearing before the magistrate was waived, and bond was given to await the action of the grand jury. The grand jury of Baltimore County, at the October term, found an indictment. The defense elected to be tried by the court. The physician was found guilty, and the lowest fine of fifty dollars was inflicted.

This case was an important and interesting one. It tested the ability of the State Board of Health to obtain both an indictment and conviction, notwithstanding the absence of intent to violate the law, and without the introduction of evidence to prove gross neglect of ordinary precautions. The evidence offered before the grand jury was only so much as was believed necessary to secure an indictment. At the trial the State admitted the defendant's plea of ignorance of the law. The defense made large claims of great activity and effectiveness on the part of the company's physician in the suppression of small-pox both before and after the intervention of the health authorities, and the State did not challenge these claims. The defense was conducted by able and industrious counsel, who employed every available expedient. The outcome would seem to indicate that the local health authorities in this State can enforce the notification of infectious diseases.

THE BACTERIOLOGICAL LABORATORY.

The report of the bacteriologist to the State Board of Health will show part of the useful work done by that officer. While the work of that department is growing, and while its results in the short period of its operation have been worth more than their cost to the State, there are some directions in which the advantages of bacteriological examinations have not been demanded at all.

Thus in determining the period at which a child recovered from diphtheria may safely be allowed to return to school, a bacteriological examination of a culture from the throat is the

only safe guide. There has not, so far, I believe, been an instance in which this method of settling so important a question has been employed by any school board or local board of health. There is absolutely no other means of solving such a question. A child is fit to associate with other children from the moment when the bacilli are no longer found, whether that occurs within a day or a month of apparent recovery, and it is manifestly important to restore the privileges of attendance at school in the shortest possible time. No period can be assumed as a safe one for exclusion from school, and even if it were known that these children all cease to be infectious within such a reasonable period as two weeks, it would still be foolish to exclude all children from school for that time, since the majority are free from infection within a much shorter period.

The custom throughout the State, outside of Baltimore City, is to permit a child to resume attendance at school whenever a physician is willing to certify freedom from infection. But no physician can certify freedom from infection upon any other than a bacteriological examination. The services of the State Bacteriological Laboratory should be largely employed for this purpose. The waste of public money caused by loss of time from school could be considerably reduced by this simple and inexpensive precaution.

It has been found extremely difficult to impress people that any loss of public money is involved in the sickness of school children. When a school is closed on account of infectious disease, as sometimes happens, the school officials have no difficulty in seeing that a waste of money is involved, and some times protest vigorously that it costs more to close the school than it would to let the children take their chances of infection at school. If it wastes money to send home thirty-five children and lock the school house for two weeks, it certainly costs one thirty-fifth of that amount if one child is absent for a like period. Indeed the absence of one child costs rather more than one thirty-fifth of the cost of closing the school, since all of the means provided for thirty-five children are expended upon the thirty-four, while certain items of expense are saved when the school-house is closed.

It seems strange that these little facts of elementary arithmetic should be so difficult to impart to educated people. The total amount of the petty waste of public funds through absence from school is undoubtedly very large, and so far as it is due to preventable sickness should be a matter of serious concern to those who manage the affairs of public education. The closing of a school on account of infectious disease is admittedly an expensive procedure, and it is well worth the while of school

officials to inquire whether it is ever necessary. Certainly such a wasteful means of restricting infectious disease is avoidable, and if avoidable, unnecessary. It is to be avoided by attention to the primary cases, and that means careful notice of every absence from school on account of sickness. Probably more schools are closed in Maryland on account of diphtheria than for any other reason. If there is any common disease which recent advances in public hygiene have brought well under control, it is diphtheria, and it is quite within the power of every local board of health, with the co-operation of the school authorities, to master every outbreak of diphtheria without interrupting the work of the schools. If the cultural examination of throats were the means generally employed to determine the fitness of children from infected houses to associate with other children, the schools would forthwith cease to propagate diphtheria in the towns of Maryland.

Wherever the service of the State Laboratory has been fairly introduced among the physicians of a locality, great advantages have been promptly realized, and in many instances as promptly acknowledged. There can be little doubt that indirectly these examinations have contributed to the saving of lives by solving the doubts or removing the perplexities which embarrassed private practitioners. There is no medical man anywhere whose ability to cure disease may not be strengthened by laboratory aid in the matter of diagnosis. The service of the laboratory has not, however, met anything like equal demand in all parts of the State. Full information was sent to every local board of health immediately upon the organization of the laboratory, and this notice was repeated in all localities from which no response was made. It is certainly not the purpose of the State Board of Health to waste public money by sending these expensive supplies to localities which manifest no desire to employ them, and it is true that these valuable aids to the saving of human life are not available to some physicians who would be glad to use them.

It is obviously impossible to send these supplies directly to physicians. That would require a much larger outfit than the appropriations will afford, and would besides, lead to endless errors, and to great loss of material. Since the usefulness of these supplies depends upon their circulation, convenient drug stores are designated as depositaries, and the separate cases are only given out as needed. By this means it is possible to keep the supplies moving, and at the same time to have them everywhere accessible at all times. For the selection of these distributing depots the local health officers have been depended upon.

For purposes of contrast we may take the adjoining counties of Frederick and Carroll. Westminster, the important county

town of Carroll, has not had one penny worth of this valuable service, though her health officer has more than once had his attention called to this liberal provision of the State. From Frederick the demand for supplies has been constant for a long time, although no unusual amount of sickness has occurred there.

SLAUGHTER HOUSES IN MARYLAND.

Mr. Charles N. Mitten, Inspector of the State Board of Health, visited during the year all the towns in Maryland of 500 inhabitants or over, and inspected all the slaughter houses. His reports are too voluminous for publication, and an abstract has been prepared, showing the important facts developed by the inspection.

Abstract of the Inspector's Report to the State Board of Health on the Slaughter Houses in Maryland Towns.

No slaughtering is done in the following towns:

UNDER 2,000 INHABITANTS.

Alberton.. .. .	Howard County.
Aberdeen.....	Harford County.
Bladensburg.....	Prince George's County.
Boonsboro'.....	Washington County.
Brooklyn.....	Anne Arundel County.
Centreville.....	Queen Anne's County.
Deal's Island	Somerset County.
Denton.....	Caroline County.
East Newmarket.....	Dorchester County.
Eckhart Mines.....	Allegany County.
Fairmount.....	Somerset County.
Govanstown.....	Baltimore County.
Hancock.....	Washington County.
Hyattsville.....	Prince George's County.
Lutherville.....	Baltimore County.
Mardela Springs.....	Wicomico County.
Millington.....	Kent County.
Mt. Vernon.....	Somerset County.
Mt. Washington.....	Baltimore County.
North East.....	Cecil County.
Oakland.....	Garrett County.
Port Deposit... ..	Cecil County.
Princess Anne	Somerset County.
Queenstown.....	Queen Anne's County.
Savage.....	Howard County.
Snow Hill	Worcester County.

Stevensville.....	Kent County.
Texas	Baltimore County.
Towson.....	Baltimore County.
Trappe.....	Talbot County.
Vienna.....	Dorchester County.
Warren.....	Baltimore County.
Westover.....	Somerset County.
Westernport.....	Allegany County.
Wetheredville....	Baltimore County.

BETWEEN 2,000 AND 4,000 INHABITANTS.

Catonsville	Baltimore County.
Crisfield.....	Somerset County.
Easton.....	Talbot County.
Elkton.....	Cecil County.
Frostburg.....	Allegany County.
Laurel.....	Prince George's County.
Salisbury.....	Wicomico County.
St. Michael's.....	Talbot County.

OVER 4,000 INHABITANTS.

Cambridge.....	Dorchester County.
----------------	--------------------

Slaughter houses are found in the following towns:

UNDER 2,000 INHABITANTS.

Barton.....	Allegany County. Offal fed to hogs. Pork sold to shippers. Fats rendered.
Belair	Harford County. Fats rendered.
Berlin.....	Worcester County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Burkittsville.....	Frederick County. Fats rendered.
Chesapeake City.....	Cecil County. Offal fed to hogs. Pork sold to citizens. Ice harvested from a pond draining a slaughter house. Fats rendered.
Cecilton... ..	Cecil County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Church Creek.....	Dorchester County. Offal fed to hogs. Pork used by butcher. Fats rendered.
Church Hill.....	Queen Anne's County. Fats rendered.
Clearspring.....	Washington County. Offal fed to hogs. Pork sold to citizens.
Cockeysville.....	Baltimore County. Offal fed to 10 hogs. Pork all used in butcher's family.
Elkridge.....	Howard County. Offal fed to hogs. Pork sold to citizens.

Ellicott City.....	Howard County. Offal fed to hogs. Pork sold to citizens.
Emmitsburg.....	Frederick County. Offal fed to hogs. One butcher ships the pork to Baltimore. Another uses it in his own family. Fats rendered.
Federalsburg.....	Caroline County. One filthy slaughter house. Offal eaten by dogs. Fats rendered.
Funkstown.....	Washington County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Greensboro'.....	Caroline County.
Hampstead.....	Carroll County. Offal fed to hogs. Pork used by butchers.
Hillsboro'	Caroline County. Fats rendered.
Keedysville	Washington County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Libertytown.	Frederick County. Fats rendered.
Manchester	Carroll County. Fats rendered.
Middletown.....	Frederick County. Fats rendered.
New Windsor.....	Carroll County. Fats rendered. Offal fed to hogs. Pork sold to citizens.
North East.....	Cecil County. Fats rendered.
Oxford.....	Talbot County. Fats rendered.
Perryville.....	Cecil County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Reisterstown.....	Baltimore County. Offal fed to hogs. Pork shipped. Fats rendered.
Rock Hall.....	Kent County. Fats rendered.
Rockville.....	Montgomery County.
Sharpsburg	Washington County. Offal fed to hogs. Butcher eats the pork. Fats rendered.
Smithsburg.....	Washington County. Fats rendered. Offal fed to hogs. Pork eaten by butcher.
Sudlersville.....	Queen Anne's County. Fats rendered.
Taneytown.....	Carroll County. Offal fed to hogs. Pork sold to citizens. Fats rendered.
Union Bridge.....	Carroll County. Offal fed to hogs. Pork sold to citizens.
Williamsport.....	Washington County. Fats rendered. Offal fed to hogs. Pork sold to citizens.
Woodsboro' ...	Frederick County. Fats rendered.

BETWEEN 2,000 AND 4,000 INHABITANTS.

Chestertown.....	Kent County. Fats rendered. Offal fed to hogs. Pork sold to citizens.
------------------	---

Lonaconing.....	Allegany County. Fats rendered in open kettles. Offal fed to hogs. Pork sold to citizens.
Mt. Savage.....	Allegany County. Offal fed to hogs. Pork sold to citizens.
Pocomoke City... ..	Worcester County. Offal fed to dogs and colored people. Fats rendered.
Waverly.....	Baltimore County.
Westminster.....	Carroll County.

OVER 4,000 INHABITANTS.

Annapolis.....	Anne Arundel County. Fats rendered.
Cumberland.....	Allegany County. Seven slaughter houses. Four feed offal to hogs. Pork sold to citizens. Drainage into Will's Creek. Fats rendered.
Frederick.....	Frederick County. Sixteen slaughter houses. Four render fats. Five feed offal to hogs. Four sell offal-fed pork to citizens.
Hagerstown.....	Washington County. Twelve slaughter houses. Five feed offal to hogs. Pork sold to citizens. Fats rendered.
Havre de Grace.....	Harford County. Offal fed to hogs. Did not learn destination of pork.

Considering first the towns in which no slaughtering operations are done, one observes that this list of 44 contains very few of the more important towns. Cambridge is the largest municipality on the list. If Cambridge has definitely and finally put her slaughter-houses outside the town limits a very good sanitary step was thereby taken. Three years ago slaughter-houses were not only offensive nuisances in obscure neighborhoods, but one particularly offensive slaughter-house was directly upon a principal thoroughfare, and the nature of the business was obtrusively displayed in the stream of blood, etc., running down an earthen bank into a ditch at one side of the street. Cambridge is to be congratulated upon having passed and enforced an ordinance forbidding slaughtering within the corporate limits. No town of equal size and age has been able to throw off the slaughter-house nuisance.

In this list one also finds the more recently incorporated towns which have profited by the errors of the older municipalities, and have not allowed the slaughter-houses to gain a foothold.

The larger and older towns have received the slaughter-houses as legacies from a past and less enlightened age. Meanwhile, these nuisances have become engrafted upon the political life of

each town so firmly as to successfully resist any movement to exclude them or to regulate them.

It is, perhaps, not very generally known that slaughter-houses may seriously menace the health of closely settled communities. Most of the complaints against them have referred only to their offensiveness to sight and smell. The abstract shows in what manner the disposal of offal is effected in each town. It is upon the disposal of offal that the offensiveness as well as the danger of the slaughter-house depends.

Only large slaughter-houses can convert refuse into marketable products without giving rise to nuisances, and large slaughter-houses do not attempt to dispose of their offal by feeding it directly to animals. In the small slaughter-house the fats are separated by rendering in open kettle, a rude and relatively expensive way of doing this work, but practically the only mode of operating upon a small scale. This always gives rise to offensive odors, and is a common cause of complaint wherever it is done in closely settled communities.

Other portions of the refuse of small slaughter-houses in Maryland are commonly fed to hogs. This practice enables the small butcher to convert into pork materials which otherwise he would be obliged to carry away at some expense. Unfortunately the pork produced by offal feeding is never good pork, and may at times be dangerous food for human consumption. If pigs fed upon slaughter-house offal were required to have a course of corn feeding before being slaughtered the resulting pork would, if the animals were free from disease, be objectionable.

But corn feeding would not improve the quality of trichinous pork, and offal feeding is quite likely to infect pigs with trichinæ. Our habit of cooking in a thorough manner all meats has prevented any notable outbreak of human trichinosis in Maryland, but thorough cooking has also concealed the dangerous quality of much of the pork sold in the smaller markets.

Human trichinosis is probably not rare in Maryland, though only a few cases have been reported within a year. The disease is impossible of diagnosis without the microscope. Its clinical features are not very distinctive, and have not been much impressed upon medical men, so that it is likely but a small fraction of the cases occurring are recognized. The disease tends slowly toward recovery, and may be mistaken for the typhoid fever or for muscular rheumatism.

Offal-fed hogs should not be offered in the market upon the same footing with corn-fed hogs, and offal-fed pork should be inspected before being exposed for sale in the shops.

INSPECTION OF MEATS.

In the last report attention was called to the need of better inspection of the meats sold for human food in Maryland. No

town in Maryland has adequate protection against diseased meats, and the more attention other States pay to the quality of their food supplies the greater grows the danger of the markets in a State which does not carefully scrutinize its food materials. Cattle which are not likely to pass the inspection at one point are sent to other places where the inspection is less rigid.

The laws of Maryland provide adequate penalties for the sale of diseased meat, but they do not provide adequate means for enforcing these penalties. A single inspector can devote but a fraction of his time to this work, and his labors can have no greater effect than whatever the moral influence of his occasional presence at the stockyards and abattoirs may be. Live cattle and slaughtered meat both require inspection, since by no means all diseased cattle are recognizable as such in life.

The principal disease found among beef cattle in the stockyards is lump-jaw, or actinomycosis. There is no means of determining whether cattle suffering with this disease are taken without the State as ordered. The strong probability is that their sale for human food is very little delayed by our methods of inspection.

In the abattoir the disease most frequently met with in the slaughtered animal is tuberculosis. Here again it is doubtful if infected portions of the carcasses are diverted from the market. It is impossible to control the disposal of diseased animals or diseased meat except every step is taken under the eye of a trustworthy and expert official.

Probably not very much harm is done to public health by the sale of unsound meat. The dangers of tuberculosis especially are much exaggerated in the popular mind, but the quality of the food supplies offered in the public markets is of great importance from other points of view than that of public hygiene, and the average quality of the meats sold in Maryland is far inferior to what it should be and to the quality of meats found in markets where rigid inspection is practiced. Furthermore, the quality of our home markets will steadily deteriorate as improved regulations come into operation elsewhere. This will be true whether the deterioration finds any expression in disease among the citizens or not.

THE TRANSPORTATION OF DEAD BODIES.

This is a subject upon which all the States need uniform laws. It concerns not only public health, but those proper human sentiments regarding human remains, which are entitled to the considerate attention of Legislatures. So long as the various States have different laws the transportation of dead bodies from one State to another is encompassed with embarrassments, difficulty and expense, which are wholly unnecessary and avoidable by

compliance at the starting point with regulations uniformly in force throughout the territory to be traversed.

The burden resulting from want of uniform regulations has been long felt by transportation companies, undertakers and boards of health in all States equally, those which had regulations on the subject and those which, like Maryland, had none. The transportation companies were obliged to formulate regulations of their own adapted to the needs of the country covered by their lines. It was obviously impossible to make a set of rules for the acceptance of this class of freight which would insure the transportation of dead bodies in every direction and over any distance with anything like uniform facility, and complications of all sorts impressed upon the common carriers the absolute need of interstate agreement as to the manner of transporting dead bodies.

Undertakers, too, found that to comply with the reasonable wishes of friends concerning the disposal of their dead involved such inordinate expense, or such a multiplicity of details, as to be practically prohibitive. They even found it at times impossible to determine whether a body could be transported to the designated point upon any terms, since it was impossible to obtain information concerning the various local rules likely to affect the removal.

Boards of health, too, were constantly embarrassed by the delay in their territory of dead bodies, lacking compliance with some more or less important detail in the local laws upon the subject.

To consider these difficulties a joint convention of representatives from the National Conference of State and Provincial Boards of Health, the National Funeral Directors' Association, and the General Baggage Agents' Association, assembled in Cleveland in 1896. At this convention certain rules were formulated and were presented by a committee to the National Conference of Boards of Health at Nashville in the following year. These rules were also considered at Detroit in 1898 by the same conference, and in 1899 at Richmond. They have now been put in force in most of the States which sent delegates to the National Conference. They were adopted by the State Board of Health of Maryland on October 12th, 1899, and so far as they relate to the transportation of bodies dead of infectious disease have the force of law.

These regulations are received by the great transportation lines as a solution of many perplexities. A body prepared according to these instructions and accompanied by the proper papers, may be accepted for transportation with the assurance that it will proceed over any connecting line and through all sanitary jurisdictions without delay.

The rules regarding the preparation of dead bodies are as follows:

Rules of the State Board of Health, and American Association of General Baggage Agents for the Transportation of the Dead.

These Rules Having Been Duly Adopted and Properly Published, Have the Force of Law.

N. B.—The authority of the State Board of Health covers only the disposal of bodies dead of *infectious disease*. Rules 4 and 6 cannot therefore be enforced by the State Board of Health, though they are necessary regulations in the transportation of bodies beyond the boundaries of this State.

RULE 1. The transportation of bodies dead of small-pox, Asiatic cholera, yellow fever, typhus fever or bubonic plague is absolutely forbidden.

RULE 2. The bodies of those who have died of diphtheria (membranous croup), scarlet fever (scarlatina scarlet rash), glanders, anthrax or leprosy shall not be accepted for transportation unless prepared for shipment by being thoroughly disinfected by (a) arterial and cavity injection with an approved disinfectant fluid, (b) disinfecting and stopping of all orifices with absorbent cotton, and (c) washing the body with the disinfectant, all of which must be done in a manner satisfactory to the local health officer at the point of shipment. After being disinfected as above such body shall be enveloped in a layer of cotton not less than one inch thick, completely wrapped in a sheet and bandaged and encased in an air-tight zinc, tin, copper or lead-lined coffin, or iron casket, all joints and seams hermetically soldered, and all enclosed in a strong tight wooden box. Or, the body being prepared for shipment by disinfecting and wrapping as above, may be placed in a strong coffin or casket, and said coffin or casket encased in an air-tight zinc, copper or tin case, all joints and seams hermetically soldered and all enclosed in a strong outside wooden box.

RULE 3. The bodies of those dead of typhoid fever, puerperal fever, erysipelas, tuberculosis and measles, or other dangerous communicable diseases other than those specified in Rules 1 and 2 may be received for transportation when prepared for shipment by filling cavities with an approved disinfectant, washing the exterior of the body with the same, stopping all orifices with absorbent cotton and enveloping the entire body with a layer of cotton not less than one inch thick, and all wrapped in a sheet and bandaged and encased in an air-tight coffin or casket, provided, that this shall apply only to bodies which can reach their destination within forty-eight hours from time of death. In all other cases such bodies shall be prepared for transportation in conformity with Rule 2. But when the body has been prepared according to the provisions of Rule 2, the air-tight sealing may be dispensed with.

RULE 4. The bodies of those dead of diseases that are not contagious, infectious or communicable, may be received for transportation when encased in a sound coffin or casket and enclosed in a strong outside wooden box, provided, they reach their destination within thirty hours from time of death. If the body cannot reach its destination within thirty hours from time of death, it must be prepared for shipment by filling cavities with an approved disinfectant, washing the exterior of the body with the same, stopping all orifices with absorbent cotton and enveloping the entire body with a layer of cotton not less than one inch thick and all wrapped in a sheet and bandaged, and encased in an air-tight coffin or casket. But when the body has been prepared as provided in Rule 2, the air-tight sealing may be dispensed with.

RULE 5. In cases of contagious, infectious or communicable diseases, the body must not be accompanied by persons or articles which have

been exposed to the infection of the disease, unless^acertified by the Health Officer as having been properly disinfected; and before selling passage tickets agents shall carefully examine the transit permit and note the name of the passenger in charge, and of any others proposing to accompany the body, and see that all necessary precautions have been taken to prevent the spread of disease. The transit permit in such cases shall specifically state who is authorized by the Health Authorities to accompany the remains. In all cases where bodies are forwarded under Rule No. 2 notice must be sent by telegraph to Health Officer at destination, advising the date and train on which the body may be expected. This notice must be sent by or in the name of the Health Officer at the initial point, and is to enable the Health Officer at destination to take all necessary precautions at that point.

RULE 6. Every dead body must be accompanied by a person in charge, who must be provided with a passage ticket and also present a full first-class ticket marked "Corpse" for the transportation of the body, and a transit permit, showing physician's or coroner's certificate, health officer's permit for removal, undertaker's certificate, name of deceased, date of death, age, place of death, cause of death, and if of a contagious, infectious or communicable nature, the point to which the body is to be shipped, and when death is caused by any of the diseases specified in Rule No. 2, the names of those authorized by the health authorities to accompany the body. The transit permit must be made in duplicate, and the signatures of the physician or coroner, health officer or undertaker must be on both the original and duplicate copies. The undertaker's certificate and paster of the *original* shall be detached from the transit permit and pasted on the coffin box. The physician's certificate and transit permit shall be handed to the passenger in charge of the corpse. The whole duplicate copy shall be sent to the official in charge of the baggage department of the initial line, and by him to the Secretary of State or Provincial Board of Health of the State or Province from which said shipment was made.

RULE 7. When dead bodies are shipped by express the whole original transit permit shall be pasted upon the outside box and the duplicate forwarded by the express agent to the Secretary of the State or Provincial Board of Health of the State or Province from which said shipment was made.

RULE 8. Every disinterred body, dead from any disease or cause, shall be treated as infectious or dangerous to the public health, and shall not be accepted for transportation unless said removal has been approved by the State or Provincial health authorities having jurisdiction where such body is disinterred, and the consent of the health authorities of the locality to which the corpse is consigned has first been obtained; and all such disinterred remains shall be enclosed in a hermetically-sealed (soldered) zinc, tin or copper lined coffin or box. Bodies deposited in receiving vaults shall be treated and considered the same as buried bodies.

JOHN S. FULTON, Secretary,

(*Passed October 12th, 1899.*) *State Board of Health of Maryland.*

The instructions of general baggage agents to station agents and baggagemasters are as follows:

Transportation of Deceased Persons in Baggage Cars.

To Railroad Agents, Station and Train Baggage-men:

You will in no case receive a corpse for transportation unless accompanied by a physician's, coroner's or board of health certificate, also an undertaker's certificate that the body has been prepared for burial and shipment in accordance with the rules of the State Board of Health, *nor*

will you receive it even with such certificates if fluids are escaping from the case or it has become offensive in any degree. One full first-class *limited* or *unlimited* ticket will be required for the transportation of a corpse without regard to the age of the deceased, and a corpse will not be taken for transportation except there is a passenger with it in charge, and the word "Corpse" to be plainly written on the face of a local and on each coupon of a coupon ticket. A record must be made of all bodies shipped and carried, on the back of your station and trip reports, giving name of deceased, and destination.

It will be the duty of Agents and Baggage Agents to see that each burial case is properly marked on "Paster," giving date and at what station shipped, point of destination, "State," number and form of ticket, name of passenger in charge and place of residence, with name of Agent. If the corpse is destined to a point beyond the initial line, the initials of each road over which it passes must be written on the paster; also the terminal point of each road at which transfer is made with the connecting line, as shown on the coupons on the ticket.

You will see that the "Certificate of Undertaker" is properly filled out by him, and the paster is properly filled out by yourself and is securely pasted to the coffin box before it is put into the car, and the permit remaining you will hand to the passenger in charge of the corpse.

The whole form must be made in *duplicate*, either with a pen, carbon paper or simplex paper, and the signature of the physician or coroner and undertaker must be on *both* the original and duplicate copies.

The undertaker's certificate and paster of the *original*, will be detached from the physician's certificate and permit and pasted to the coffin box. The physician's certificate and the permit will be handed to the passenger. The *whole duplicate* copy will be sent to the General Baggage Agent of the initial road by first passenger train.

All this information is necessary to insure the prompt and correct transportation of the corpse.

A transit permit is obtained from the local board of health at the point of shipment. If the body goes as baggage the permit is carried by the passenger who is in charge of the body.

TRANSIT PERMIT.

This Certificate Must Be Presented to the Local Board of Health for Approval.

PHYSICIAN'S OR CORONER'S CERTIFICATE.

If the body is going by express the transit permit and the paster are both glued to the coffin box.

A duplicate of the whole is retained by the station agent or baggage man to be forwarded by the next train to the general baggage agent of the company, who in turn sends it to the Secretary of the State Board of Health.

VACCINATION CERTIFICATES.

In the last annual report a form of vaccination certificate was suggested which involved a reasonable interpretation of the legal phrase "duly vaccinated." That certificate has been adopted by the school boards of several counties, and in those counties there is now a correspondingly higher immunity to small-pox. The agitation of the subject at various times and places within the past two years has drawn the attention of teachers and school officials to the subject, and inquiries such as follow are not unusually received, especially from schools situated near boundary lines.

HENRYTON, MD., December 15th, 1899.

DEAR MR.....

If on entering a school a pupil presents a certificate like the one enclosed and says the vaccination was efficient, what would be the advice for our school.

....., Teacher.

VACCINATION CERTIFICATE.

State of Maryland, Carroll County, }
to wit: October 21st, 1892.

This is to certify that G. H. has been properly vaccinated.

J. W. S., *M. D.*

MARYLAND, December 16th, 1899,

DR. JOHN S. FULTON, Baltimore, Md.:

DEAR SIR—Will you kindly answer Miss S's question, and oblige,

Yours very truly,

D. L. F., *Examiner.*

The reply to this inquiry must be that the certificate submitted is not definite as to any of the proofs of vaccination against small-pox. It does not say that G—— H—— was vaccinated at any time by the subscribing physician. It might suggest that some evidence was found in the person of G—— H—— that vaccination had been done at some time by some person, or it might as reasonably signify that the subscribing physician had on the date of his certificate vaccinated G—— H——. The only evidence as to the time of this vaccination is contained in the teacher's note, and the only evidence as to possible success or failure of the vaccination comes to us at second hand from the child.

A correct vaccination certificate should bear the date of the operation and the date of the subsequent observation upon which the physician's judgment was based. We reproduce here a form of certificate which seems to furnish the definite data upon which a child's immunity or susceptibility to small-pox may be judged.

CERTIFICATE OF VACCINATION.

Public School No.—— District No.—— County——

This certifies that on——I vaccinated——with lymph obtained from——, and that on——a typical vesicle, scab, or scar was present at the site of operation.

Signed.....*M. D.*

Address.....

The reverse of the blank bears the following:

Teachers should carefully preserve all vaccination certificates. Those which do not report the presence of a "typical vaccine vesicle, scab, or scar at the site of operation," admit a child to but one year's attendance at school. At the beginning of another term revaccination should be done.

Successful vaccination, duly certified, admits a child throughout school life.

JOHN S. FULTON,

Secretary State Board of Health of Maryland.

There has been but little difficulty in securing better compliance with the law respecting the vaccination of school children. The near approach of small-pox to the boundaries of Maryland has had a wholesome effect. So far as is known there is but one county in the State where any considerable popular opposition to vaccination exists. That is Garrett County.

Several weeks in advance of the date of the opening of the public schools, all the county school boards were reminded that vaccination should be attended to before the schools opened, and not delayed so long as to become a hindrance to the work of the opening weeks of the school year. On the day previous to the date of opening the public schools of Garrett County, a telegram was received reporting that a large number of children were unvaccinated, and asking whether the schools should be opened. Reply was made that the schools should be opened since even an outbreak of small-pox was not too high a price to pay for public schools, and that if Garrett County should elect to take such a risk, her affairs were in her own hands, so long as her neglect did not endanger the adjacent parts of the State. The School Commissioners were advised, however, to push forward the vaccination of school children as rapidly as possible.

In December a committee of the Garrett County School Board visited Baltimore to consult the State Board of Health concerning the incomplete vaccination of school children in that county. They reported that twenty-five per cent. of the children in the public schools were unvaccinated. The small-pox situation in Pennsylvania and in West Virginia was fairly put before these gentlemen, and they were urged to press the work of vaccination as rapidly as possible to completion.

On the same afternoon notification was received of the occurrence of small-pox at Lonaconing, in Allegany County. The School Board of Garrett County was accordingly notified that this circumstance gave the previous recommendations added urgency. They were instructed to notify all unvaccinated children in the schools that they need not return after the holidays unless they were, in the meantime, vaccinated. The School Board presently began to receive more or less violent protests against this action. The following letters were referred to me by Mr. U. G. Palmer, Secretary of the School Board for Garrett County. The replies of the Executive Officer of the State Board of Health are also reproduced:

POCAHONTAS, PA., December 22, 1899.

PROF. U. G. PALMER:

DEAR SIR—Received your note to-day, will do as requested. Please find enclosed term report. I read notice regarding vaccination to school yesterday, and in consequence the citizens are up in arms. They say they will not have their children vaccinated. If they are determined my

school will have to be closed. There will be about 65 scholars after the holidays, and there isn't any person here to vaccinate them even if the people were willing. There is a practicing physician stationed at Pinzel, but he positively refuses to vaccinate the children unless authorized to do so by the proper authorities, and armed with legal power. And, furthermore, he says that if the law is compulsory that the State should pay for the work done in that capacity. If the law is enforced it means that nearly that many children will be deprived of that much schooling. Please advise by letter to Pocahontas, Pa.

H. A. L., *Teacher.*

MR. H. A. L., Pocahontas, Pa.:

December 27th, 1899.

DEAR SIR—Your letter to Mr. Palmer referred to me. Unvaccinated children must not be admitted to your school when it is reopened. If the school must be closed then close it. We did not make the law and we cannot relax it. Parents who do not want their children vaccinated know the law, and make their own choice, either to have the children vaccinated or keep them out of the public schools.

The School Board is responsible to us for the vaccination of the children, and the County Commissioners are responsible for the cost of vaccination. No physician can be expected to do the work unless payment is guaranteed, but a vaccination certificate is a necessary qualification for any child who wishes schooling at public cost.

Yours very truly,

(Signed)

JOHN S. FULTON, *Secretary.*

WILSON, W. VA., December 25th, 1899.

MR. PALMER:

DEAR SIR—The people up here are not going to have their children vaccinated for they have the mumps and they don't want both. If you could let the school go on this winter, they will have them vaccinated next summer. If they have to be vaccinated the school will close. Please write at once.

W. H. K.

MR. W. H. K., Wilson, W. Va.:

December 28th, 1899.

DEAR SIR—Your letter to Mr. Palmer referred to me. If mumps are so prevalent as to prevent vaccination then the schools should be closed on account of mumps. When the mumps are over you can open the schools, admitting only the children who bring vaccination certificates. The vaccination law was passed long years ago, but the mumps have just arrived. An attack of mumps need not postpone vaccination more than a week, and vaccination need not postpone a child's return to school one day.

Yours very truly,

(Signed)

JOHN S. FULTON, *Secretary.*

January 12th, 1900.

MR. U. G. PALMER, Secretary,

Garrett County School Board, Oakland, Md.

DEAR SIR—Yours received. The penalties of the vaccination law are upon school teachers who admit unvaccinated children, upon parents who neglect to have their children vaccinated, and upon physicians who refuse or neglect to vaccinate those who apply for that purpose. All the fines are for the use of the local School Board.

We went over this matter yesterday at the meeting of the Board, no other county than Garrett being under consideration. I suggest that you attend the next meeting of the Board on February 8th. We take the

same common sense view of the law that you do. It is intended to prevent small-pox. But we do not think the burden of the safety of school-going children ought to be carried by part of the children, but should rest equally on all. We do think that the exclusion of unvaccinated children from school makes it almost impossible that children shall contract fatal small-pox while in school. Unvaccinated children cannot be kept off the streets nor out of church, but they can and should be kept out of school.

If many unvaccinated children are losing their winter schooling, it can be for no reason except that their parents have not had them vaccinated. They are also losing the vaccination which the State provides as free as it does education for those who are unable to pay for it. Education is not compulsory, nor is vaccination compulsory, but the law says that children who want to go to school at public cost must be vaccinated. You, as a School Board, cannot protect the safety of the community at large any further than that the careful defense of the schools is a part of the public defense, but to that extent it does seem to us that the School Commissioners are the guardians of public health.

There may be no small-pox in Garrett County this winter, but if there should be, are you prepared to guarantee that children will not suffer? These are the young citizens who cannot speak for themselves, but are at the mercy of their parents, of your board and of ours. I confess that I know of no other means of defending them against small-pox as sure as vaccination. It is said, in round numbers, that three thousand school-going children in Garrett County are vaccinated, while one thousand are not. This is manifestly unfair. If *all* your children were unvaccinated, and your community were willing to take the full risk of small-pox. I should say that public education is too valuable to be lost on account of small-pox. But the parents who are keeping one thousand children at home say in that act that education is not worth the cost of vaccination.

Yours very truly,

JOHN S. FULTON, *Secretary*.

FINZEL P. O., GARRETT CO., MD., January 12th, 1900.

DR. JOHN S. FULTON, Baltimore, Md.:

DEAR DOCTOR—I enclose you a letter that I received from the County Commissioners in regard to your letter to Mr. Loraditch, the teacher here, that the county would pay the expenses of vaccination. I have vaccinated 35 children, and have 10 or 15 more to vaccinate. I have received no pay for this, and the parents all say, and justly too, that if there is compulsory vaccination for the children that the county or State ought to pay for it. I have had a good deal of trouble prevailing on the people to have their children vaccinated, but have succeeded in getting some vaccinated in every family around me. I do not know what the price is for vaccination, but I think the county ought to pay for it, especially as it is compulsory and the people have kicked against it so. Hoping to hear from you about the matter, I remain,

Yours very truly,

F. A. G. M., *M. D.*

OAKLAND, MD., January 3d, 1900.

DR. F. A. M., Finzel, Md.:

DEAR SIR—In reply to yours of the 29th ult. will say that the children's parents will have to pay for the vaccination of their children, as the Commissioners have no power to do so.

Yours truly,

A. G. R.

DR. F. A. G. M., Finzel, Md.:

January 15th, 1900.

DEAR DOCTOR—If you will read that portion of Article 43 which falls under the title "Vaccine Agency" you will find that the County Commissioners are bound to pay for the vaccination of children whose parents are unable to pay. So far as you can swear to your bill you can collect it. You are quite right that the State ought to pay for vaccination which is compulsory, but there is no compulsory vaccination in Maryland. Vaccination in this State is alternative; vaccinate the children or keep them home from school.

I think if you put the matter squarely and resolutely before the County Commissioners, they will pay your small bill. Fifty cents is the sum named in the act as the fee for a vaccination. I have known other Boards of County Commissioners to refuse payment, but I do not know of any instance in which a bill like yours has been successfully contested by the Commissioners. The only means they have of avoiding such bills is to appoint regular vaccine physicians.

Yours very truly,

JOHN S. FULTON, *Secretary*.

GORTNER, MD., January 15th, 1900.

DR. FULTON, Baltimore, Md.:

DEAR SIR—The vaccination "question" is on here in this county of Garrett, and being a teacher I desire to be within constitutional law. Has the question of the constitutionality of the vaccination law ever been decided by the Court of Appeals of this State? If so, in what volume of reports may the opinion be found? Also, has it ever been decided by that tribunal whether or not the Legislature has the power to make, or require teachers to make, exclusive, what the constitution says shall be free? Also, is it the object to have the children vaccinated or to drive them out of school? If the former, why not enforce the original act relating to vaccination, which is law just as potential as that relating to or requiring a certificate for entrance to the public schools, and then the trouble about entrance to the schools could not arise.

You speak of your duty under the law. Is it more your duty to attend to the driving of uncertified children upon the street, and the punishment of teachers who will not assist you in the work, than it is to punish the parent who has a child past twelve months old and in good health and not vaccinated upon the street, or within the home and around the family hearth, if you please? Since you seem to be very much interested in the second part of the vaccination law to keep your official skirts clean, will they become more befouled by neglect in the second part than in the first part?

Show the people of your State that you are not hostile to the public schools by laying the enforcement of health laws wherever it can be done in a way, and where they will not operate in a way to drive a single needy child from the benefits of the public schools, and in this case it can be done. Why not do it?

Is there any less danger with the child at home, where it seldom, if ever, gets to town if living in the country, or on the streets, if in town, than if it be in the school under the same circumstances? Is it any more our duty as teachers to send a child home unless it has a certificate of vaccination than it is your duty to see that every child of twelve months or over in this State be vaccinated? That is, provided it is your constitutional and lawful duty to see that we obey the law. I do not believe the law is constitutional, since two States have so decided similar laws, and another one, to my personal knowledge, abandoned its enforcement as a result of those decisions, and I shall act accordingly.

Hoping to hear from you relative to the first two questions, and to receive a reply thereto, I am

Your obedient servant,

I. C.

January 16th, 1900.

Mr. I. C., *Teacher*, Gortner, Md.:

DEAR SIR—Yours of Jan. 15th at hand, and replying have to say that your whole duty as a teacher in relation to the vaccination of school children is found in Section 31 of Article 43, (Sec. 7, Chapter 257, Acts of 1872.) The State Board of Health has not laid these injunctions upon teachers nor upon school boards. The purpose is to protect the children in the public schools from small-pox.

It is not at present the business of teachers or school boards, or health officers, to inquire into the constitutionality of the law. We are all bound to comply with the law so long as its constitutionality, affirmed by the vote of the Legislature and the approval of the Governor, remains unimpaired. I have a letter from a lawyer on the question of constitutionality.

Yours very truly,

JOHN S. FULTON, *Secretary*.Mr. I. C., *Attorney-at-Law*, Gortner, Md.:

January 16th, 1900.

DEAR SIR—I have yours of 15th inst., and replying have to say that the validity of the several acts making up the law of Maryland relating to vaccination has never been attacked.

To your question—whether the Legislature can make exclusive what the constitution says is free—I reply that education is free in this State to all healthy children above the age of six years, of sound mind, and vaccinated.

To your next “also”—I reply that the laws of Maryland and the Constitution offer to every indigent child both education and vaccination at public cost, and that both are valuable gifts to the citizen, and profitable investments for the State.

The only duty of the State Board of Health involved in the law under consideration is to maintain the immunity of children to small-pox. An unvaccinated child is no safer upon the streets than at school, but the school is safer.

My private opinion is that public education is too valuable to be lost to the youth of our State even if we had to pay the price of many young lives for it. But it is unnecessary to pay such a price and the security against small-pox is very cheap. The question concerns not the value of public schools, but the value of children.

We hold the open and free schools to be worth considerable loss of life from small-pox. You seem to hold the schools of less value than the cost of vaccination. Garrett County governs herself. Get your School Commissioners and your Local Board of Health together. If they agree that children are so cheap the schools can be run on that principle, the State Board of Health will not interfere until the penalty of that view falls in part upon some other portion of the State.

Respectfully yours,

JOHN S. FULTON, *Secretary*.

SMALL-POX.

Late in December, 1898, cases of variola occurred in Hagerstown. This was the first invasion of the State, and it was well and decisively met by the local Health Officer, Dr. J. McP. Scott, who was able not only to hold the infection fast at one point, but to put it out without disturbing the public mind even in the slightest degree. The brief note upon this outbreak contained in our last report comprised the whole story of this outbreak.

THE OUTBREAK AT POCOMOKE CITY.

The outbreak at Pocomoke City was, at the time of its discovery, somewhat threatening. The story of the outbreak is told in the report of Dr. C. F. Hargis among the reports of local health officers. It is only necessary here to give due credit to that officer for effective work.

When the first case was discovered the town was without a health officer. The Mayor being notified at once assembled the town council, appointed a health officer and notified the State Board of Health. The County Commissioners also assembled promptly on the occurrence of this emergency, and at a joint meeting, at which the boards of health of the town, county and State were all represented, proper measures for the restriction of small-pox were put into operation. The deliberations of these gentlemen in the presence of a problem which was quite new to nearly all of them, were marked by intelligent appreciation, breadth of view and promptness of decision, which fell into pleasant contrast with the narrow and unintelligent make-up and dilatory habits of certain other boards governing the sanitary affairs of other localities.

One of the two deaths from small-pox which occurred in Maryland during the year happened at Pocomoke City, in the case of a young, colored, pregnant woman, unvaccinated. The only other fatality was in an unvaccinated infant in Baltimore City.

The vaccination done in Pocomoke City and the vicinity during this time was very thorough, and left an inconsiderable residue of unvaccinated persons. Revaccination was also general.

The promptness and thoroughness of the local sanitary work kept down popular fear and the injury to local business interest was small and transitory. As is usually the case, the symptoms of panic were most apparent among the wholly unprepared communities of the adjoining County of Somerset. The County Commissioners of Somerset had never assumed any of the duties of a local board of health. Indeed, they had on many occasions distinctly repudiated all such obligations. The proximity of Pocomoke City to Princess Anne, the county town of Somerset, aroused the town commissioners of Princess Anne, who passed a general vaccination ordinance and called upon the County Commissioners for assistance. In the appeal to the County Commissioners, the State Board of Health joined, and it is believed that the County Commissioners knew what was asked of them. They appointed a vaccine officer and showed other symptoms of wakefulness.

THE OUTBREAK AT CUMBERLAND.

The outbreak at Cumberland was discovered by Dr. Miller, who reported it to Dr. Chas. H. Brace, Health Officer for Alleghany County, who in turn telegraphed the information to the State Board of Health.

The first case was in the person of a white married woman, who could not trace her infection to any source. The inmates of the house were vaccinated and kept under observation, the sick person was carefully isolated and the house quarantined under guard. A subsequent case, traceable to this house, occurred in another part of Cumberland on a business street. This house was isolated by the construction of a fence and kept like the other one, under guard. The number of cases comprising this outbreak was small, numbering not more than four persons.

No account of the occurrence has been given to the State Board of Health, though a report was several times promised, and, if forthcoming, would probably have shown that the local health officer for the City of Cumberland managed the outbreak well.

THE SPARROW'S POINT OUTBREAK.

This outbreak is spoken of in the report of Dr. Stevenson, Health Officer for Baltimore County. It was his first engagement, and he was able to conclude it in a very satisfactory manner.

This outbreak occurred under circumstances particularly favorable to restrictive methods. The community, of about three thousand souls, occupies land belonging to the Maryland Steel Company and derives its whole support from that wealthy corporation. The influence of the company, added to the authority of the sanitary officers, is sufficiently powerful to apply in a thoroughly effective manner whatever means are available for the restriction of infectious disease. The management of the company is in strong hands, and but for failure to notify the first case, and other errors detailed elsewhere in this report, the extinction of this outbreak with one or at most two cases would have been easily accomplished.

When control of the situation was undertaken by the Board of Health of Baltimore County on May 12th, the co-operation of the company was fully pledged, but the extent of the infection was unknown, and determinable only by house to house inspection. While the State Board of Health assisted in the work of suppression as far as seemed necessary, the chief burden of cost fell upon the local board of health and to them is due the credit of preventing an epidemic, which on the 12th of May was certainly impending.

The company is said to have spent much money, but their expenditure was the price of delay rather than the cost of small-pox.

OTHER OUTBREAKS.

Two exceedingly suspicious cases occurred near Bowie, Prince George's County, in February, 1899, in the persons of two young ladies, one of whom had been employed as a saleswoman in Washington, though it could not be ascertained that she had been in contact with any case of the disease. These were very mild cases, indeed, but it cannot be said that the diagnosis of small-pox was beyond doubt. The weight of evidence seemed to favor that view. The cases were carefully isolated, and the family must be given great credit for patiently submitting to the recommendations of their family physician and the Secretary of the State Board of Health, especially in view of the doubt which was frankly confessed to them.

Near Cox's Station, in Charles County, a suspicious case was reported to the State Board of Health in September, 1899. It was promptly investigated and found to be a case of mild small-pox in a colored girl. Another case probably occurred in the same house, though the illness was very slight. The only circumstance which seemed likely to be connected as a cause with this slight outbreak was that a package of second-hand clothing had been received from Washington about four weeks before the occurrence of the sickness. There was in this bundle a dress, which was worn but once, and then by the girl who twelve days from that date had the prodromal symptoms of small-pox.

This family lived in an isolated house about half a mile from the village. There were but four persons in the house. A committee of citizens undertook the responsibility of maintaining the family during the necessary quarantine. A general vaccination was rapidly accomplished, and no spread of the disease occurred.

AS TO SMALL-POX IN GENERAL.

Small-pox has been quite prevalent in various parts of the country for nearly two years past, and has been epidemic at various times and places in Virginia, West Virginia and Pennsylvania. A somewhat serious epidemic prevailed in Alexandria last winter, and, as was expected, the City of Washington had a considerable number of cases.

Maryland had the good fortune to escape without a single alarming outbreak, and except at Sparrow's Point, had no very expensive or arduous work to do against it. If this good fortune is to be attributed to one influence more than another, it was probably due to the prompt recognition of the disease in its first appearance, and this in turn is ascribable to the carefulness of practicing physicians. Small-pox has of late years grown so

unfamiliar that the very great majority of physicians in this State have never seen a case. Those who saw their first cases of the disease during the past year could not of course be expected to make the diagnosis with confidence, but they all had the courage and good sense to avoid the common blunder of mistaking the mild cases for chicken-pox. This error has been the chief contributor to epidemicity of small-pox in the United States. In some sections of Pennsylvania particularly the practicing physicians having committed this mistake, have clung to it with pertinacity, and in some instances with such blind obstinacy as to thwart all the efforts of the health authorities to control the disease. No single instance of this error has happened in Maryland, and the fact speaks much in praise of the intelligence and honesty of those physicians under whose observation the first cases fell.

The diagnosis of small-pox is by no means always easy even to those who have had large experience, and probably chicken-pox resembles the disease more than any other eruptive disorder.

TYPHOID FEVER.

In the report for 1897 we offered as an estimate of the annual mortality of Maryland 880 deaths at the lowest, and 1240 as the highest number which the available data indicated. In the report for 1898 we said that extended observation showed the true typhoid mortality to lie between these two extremes. Figures for the year ending June 30th, 1899, show that certainly no fewer (and probably a hundred more) than 904 persons died during that year of typhoid fever. The only correction which this estimate contains is that for the 45 per cent. shortage of the returns and for the typhoid content of the "Unknown" column. If the probable cases which are included in other mortality columns were added, the total number would be considerably increased.

To show the waste of life and health entailed by typhoid fever, let us imagine that all the cases of typhoid fever for a year should happen at one time and in one place, and should be cared for in somewhat the same manner, that is in dwellings. Nine hundred and four deaths suggest the sickness of not less than ten thousand persons. Ten thousand persons having typhoid fever would require for housing a city of the size of Hagerstown. Every five sick persons would give steady employment to two nurses and a laundress. Here, then, are 8,000 more inhabitants for an imaginary City of Typhoid. For every twenty patients we will allow one physician, adding 500 more inhabitants. The average duration of a case of typhoid fever is 42 days, so that for six weeks a population of 18,500 persons would have to be supported, without in that time producing one

penny worth of anything. If it cost to supply these people with the necessities of life a little more than it costs to support the paupers at Bayview Asylum and a little less than it costs to support the charity patients in the hospitals, this City of Typhoid would cost in six weeks \$222,000. If the doctors and nurses would considerably accept such wages as are ordinarily paid to cooks and laundresses, \$153,000 would have to be added to the expense account.

So far we have not charged up anything for the cost of death. Funerals would occur in that city at the rate of something over 150 a week. At the price of a pauper funeral the 904 deaths would cost \$5,624. If each citizen who died can be said to have been worth the price of a good cow, \$40.00, the cost of the deaths will be increased by the sum of \$36,169, bringing the total cost of running the City of Typhoid for six weeks up to \$416,784. If these citizens are worth less than forty dollars each, it would be cheaper to butcher them all at the beginning of their illness. They could be butchered and buried for \$62,500, or the remains could be sold to the tankage men at three or four dollars a ton, which would save the \$60,000 funeral expenses and yield quite a profit.

If these latter suggestions in the direction of economy are not sufficiently revolting, there is but one more revolting manner of dealing with the problem of typhoid fever, and that is to permit this disease to go on year after year, collecting its ghastly tolls from the youth and vigor of the State, and holding its still more hideous menace over the thousands whom it does not quite destroy.

The appeal here made to figures is based upon the lowest cost which the number of cases of typhoid fever can be estimated to inflict. The average cost of an illness from typhoid fever on this estimate is but twenty-two dollars. The mere idleness of a citizen for forty-two days costs more than that. Necessary attention to each person sick with typhoid fever requires four-fifths of the time of a healthy person, and the thirty-three days of labor here involved are worth more than twenty-two dollars. Nevertheless the \$220,000 which barely suffices for the support of those sick with typhoid fever, for an unproductive period of forty-two days, is a large enough sum certainly to arrest the consideration of the most thoughtless. If the average citizen were worth as much as a good slave, we should have to add four times as much for the cost of the 904 deaths. If the average citizen was worth what it costs a negligent corporation to kill one, the cost of death alone would be \$470,000 a year.

One million dollars a year is under the total annual cost of typhoid fever in Maryland, and this waste of wealth is avoidable. It is possible to cut down the sickness from typhoid fever

to one-tenth of its present measure. This work does not proceed upon theory nor without example. The story of how typhoid fever has by simple means been cut down to one-tenth or even one-twentieth of its magnitude when unrestricted, has grown tiresome from often telling. Its total extinction has more than once been accomplished in cities equal in population to the whole of Maryland.

Typhoid fever is a water-borne disease, and except as drink or food does not gain access to the human body. The private wells in Maryland cause probably three cases of typhoid fever for every single case attributable to a public water supply. The efforts of the State Board of Health to instruct the people of the State upon the care and protection of drinking water have, perhaps, not been fruitless.

An instance in which the efforts of the local Board of Health to put down an epidemic of typhoid fever were met by violent and successful opposition, occurred in 1899 at Towson. In former years Towson visited their severest displeasure upon those who ventured to point out the causes which reproduce typhoid fever there every year. In June, 1899, reports of typhoid fever in that town caused the Health Officer of Baltimore County to begin an investigation. In this the State Board of Health was asked to assist. There was little new to discover, the causes of typhoid fever having been repeatedly demonstrated in previous years. A considerable number of wells were examined, and some of them found very bad. This information was conveyed to the sanitary commissioner of Towson, who for some reason declined to make any use of it. The facts were laid before the County Commissioners, who instructed the County Health Officer to do whatever seemed necessary to prevent an epidemic. It was determined to send to the owners copies of the reports upon their private wells, advising them concerning the dangers of polluted water, and to place placards upon all polluted wells which were so situated as to be used by many families. These placards were promptly removed from the pumps, so that it seemed impossible by this means to inform the public concerning the danger of the public pumps. It was then determined, under legal advice, to serve notices upon the owners of public pumps, ordering that they should be either dismantled or locked. This notice was not in any way complied with. Two citizens who had polluted pumps which were largely resorted to were arrested on complaint of the County Health Officer, and were held by the magistrate to await the action of the Grand Jury. The facts were laid before the Grand Jury at the December term, but nothing issued. Meanwhile the typhoid fever did its usual year's work, and new cases have continued to appear up to this date (Jan. 2nd, 1900).

Some thirty cases were known to have occurred before October 1st among the twelve or fifteen hundred inhabitants. The popular clamor against the health authorities had a noticeable effect upon the local medical men, some of whom probably did not report all the cases which occurred. The action of the sanitary commissioner of Towson in refusing to take any steps to prevent the spread of the disease is not to be explained by fear of popular censure. The notoriety which all the circumstances obtained through the misguided opposition of the people too plainly indicated sanitary reforms, worked considerable damage to real estate interests, and those who invoked this unfortunate notoriety loudly ascribed to the health authorities both the intention and the act of inflicting this injury. It is very likely that the injury was done, and if so, it is certain that the effects will persist as long as public pumps supplying water fouled with human excrement are allowed to stand in public places and offer their treacherous invitation to all that pass. The typhoid fever which will continue to appear can not, any more than a burning house, be concealed, and the causes of the typhoid will be pointed out to the public as certainly as they are known, so long as the Local Board of Health desires information which the State Board of Health can give.

This narrative illustrates the futility of undertaking in any locality work for which there is no popular demand. It is inconceivable that those who were affected by the prevalence of typhoid fever were indifferent to the efforts of the Local Board of Health to stop its further spread, but they seemed to lack either the influence or the megaphonic qualifications of those who denied both the existence of typhoid fever and the necessity of restrictive measures.

It is impossible for a large epidemic to occur in any community where no effort is made to prevent the spread of a perennial infection, such as typhoid fever. The fever can only injure each year those who are susceptible, and one of the results of unopposed typhoid fever is the acquirement of immunity by a fresh portion of the population every year. It of course costs a good many lives to produce this general immunity to typhoid fever, but as the loss of life is distributed evenly over the successive years, the waste makes no considerable impression upon the popular mind. If we could arrange that all deaths which will surely occur in Maryland in 1900 should all fall in the same week, there is not a county in Maryland which would not send up a lamentation such as has not been heard since the first Holy Innocents' Day.

A singular, perhaps stupid, objection to the employment of public measures against typhoid fever was encountered during the year in a county whose persistent neglect of sanitary work has been the subject of much animadversion in this and previous

reports. We were told by a tribune of the people, definitely charged by the law and sworn to defend public health, that the medical men of the county could and would do whatever is necessary to prevent the spread of typhoid fever, and that county funds ought not to be spent upon such work. If one met with ignorance of this variety and depth in a grammar school-boy, there are resources against it, but how shall one deal with such infantile perceptions on the part of a man chosen by the people to be a guardian of their safety. It is easy to reply that the medical men cannot and will not do any such thing, because it is no part of the work which the public expect of them or pay them for. The county commissioner easily settles this statement by saying that he had typhoid fever in his family last year and the doctor was entirely successful in preventing it, and that he believed that if he should have typhoid fever in his family again next year his physician would be able to repeat his success. Such a man should write the praise of those volunteer fire brigades who prevent the combustion of incombustibles.

While the prevention of an epidemic disease such as typhoid fever is a public duty, much can be done by private individuals whose households, through the neglect of public officials, are invaded by typhoid fever. The attention of a local health officer should at once be called to such an occurrence, and he should be asked to search out the cause. If his investigations should include any water supplies, the aid of the State Board of Health can always be had for the asking. The State Board of Health cannot, however, make personal investigations of small outbreaks of disease, nor send an inspector to do the work which properly belongs to the local health officials.

From the moment when a case of typhoid fever is recognized, the customary water supply of the family will remain under suspicion until it is proven to be harmless. Pending an examination into its quality, all the water intended for drinking should be boiled and cooled in clean vessels. Even if the domestic water supply is found to be of good quality, great care should be taken to prevent its becoming infected. The infection escapes from the sick body in the discharges of the bowels and bladder, and the well cannot be considered safe from infection if these evacuations are thrown upon the ground without disinfection. Urine and feces can be rendered harmless in an hour by applying to them an equal quantity of a solution of chloride of lime (one pound to a gallon of water) or milk of lime (one quart of quick lime to a gallon of water) or a five per cent. solution of carbolic acid.

* The bowel discharges of a case of typhoid fever can be considered as no longer infectious after convalescence is well established, but the urine continues to carry the bacillus of typhoid fever sometimes for months after recovery is apparently com-

plete. Persons recovering from typhoid fever should, therefore, be instructed to be very careful not to void their urine in such a manner or place as will admit any risk of infecting any one. By scrupulous attention on the part of infected families to these discharges it is possible to defend both the family and the community, but it should be remembered that the occurrence of the first case which renders these domestic precautions necessary is an injury inflicted upon the household by the neglect of society. Every citizen to whom this infection happens has a right to regard his illness not as a misfortune only, but as a positive injury which only differs from crime in that it was not deliberately aimed at him.

TUBERCULOSIS.

The conception that tuberculosis may be prevented cannot yet be said to have fixed itself in the public mind, and until that view has been widely propagated, the duty of preventing tuberculosis will not weigh upon the public conscience. The people of Maryland believe fully in the prevention of small-pox, and have witnessed the proof that it is amenable to restrictive measures wherever it has appeared. Many communities have also tested the effectiveness of sanitary work against diphtheria and scarlet fever. In a few instances public proof has been made of the preventability of typhoid fever. Nowhere in Maryland has any attempt been made to limit the ravages of consumption. And indeed it is an appalling task.

Nevertheless the problem is being attacked elsewhere, and we in Maryland must begin soon to consider it. In Germany the prevention of tuberculosis has been undertaken on a large scale. In England active preparations are going forward. In this country Massachusetts has spent a great amount of money in an ineffectual attempt to control the tuberculosis of dairy cattle, but has obtained very profitable results from much less expenditure of funds upon a State sanitarium for consumptives. A bill now pending in the legislature of New York, and likely to pass, appropriates \$200,000 to the construction of a great sanitarium for the cure of tuberculosis. Michigan has been able to demonstrate a measurable restriction of tuberculosis due simply to the instruction of infected persons and families concerning merely the personal and domestic precautions, which are applicable in the home care of consumptives. Having this definite basis of small success to proceed upon, Michigan is now considering the establishment of State sanatoria for the care of consumptives.

No State has hitherto assumed the cure of disease as a public obligation, but the problem of tuberculosis forces the question of cure upon the State as a necessary part of any plan of prevention. Tuberculosis is a disease of extremely slow progress,

difficult or even impossible of recognition in its earliest stages, permitting those who suffer from it to continue long at their ordinary avocations, and maintaining in one living, working body a focus of infection for years and years.

Consumptives cannot be isolated, as lepers are, for life. They are too numerous. They cannot be isolated as other infectious diseases which run a brief course and threaten public safety for but a short time. The speediest possible cure of early cases and the segregation and maintenance at public cost of late and incurable cases are the best means of controlling the spread of this disease.

Since the best known means of curing consumption is found in the hygienic-dietetic treatment, the resources of medicine are not within the command of ninety-five per cent. of those affected by the disease. The cure of consumption upon a large scale cannot, therefore, be even attempted except at public cost, or through large private philanthropy. The State cannot be moved to take up such work upon philanthropic grounds alone. The State's interest in her citizens is purely that of profit and loss, and it is therefore necessary to show that the expenditure of public funds in the prevention of tuberculositis will pay.

One can at this time do no more than indicate what are the present losses from tuberculosis and in what direction profits may be expected. Seventy-five per cent. of all consumptives are now maintained at public cost during some part of the course of their disease. Ninety-five per cent. of consumptives are receiving no systematic or rational treatment. All of these are centers of infection in families, factories, schools, offices, in private and in public, everywhere. Probably ten per cent. of them are curable by a course of dietetic treatment of from six months to a year's duration. In another twenty-five per cent. the disease could be arrested if not cured by the same means. Of the remainder, all who are strong enough to go to a sanatorium and remain there for three months would in that time learn such habitual care of their expectoration as would render their return to family life far less dangerous to others. In other words, out of every one hundred consumptives taken to properly equipped sanatoria, ten would in a year return in sound health to wage-earning, twenty-five others would become self-supporting again and free from active infection, and all would have learned not to infect those with whom they came in contact. One hundred sources of infection would have been absolutely cut off for a year.

It is clearly recognized that Maryland is not yet prepared to undertake the control of tuberculosis upon a large scale, but it is not too early to make an experiment in this direction. If a well-planned effort were made to control tuberculosis in one small, well-selected area, we might produce a convincing illus-

tration of the possibility of restricting tuberculosis, and might "try out," so to speak, the means which have been found effective elsewhere.

DIPHTHERIA.

Eighteen hundred and ninety-nine was a diphtheria year in Maryland. Considerable outbreaks and even small epidemics have occurred in various parts of the State. The conditions have been extremely favorable for a great epidemic in Baltimore, and the fact that it has not assumed more alarming proportions cannot fairly be ascribed to any other influence than to a well-planned, well-executed and unremitting campaign against it by the Health Commissioner of Baltimore City. With the history of 1897 and 1898 in mind, and taking into account the wide prevalence of the disease in surrounding counties, Baltimore had every reason to expect extraordinary losses in 1899 from diphtheria, and the measures which were taken in view of these considerations were unquestionably, and in a marked degree, successful.

The mortality in the State has not been so large as a similar amount of sickness in previous years would have led to. This is due to the present, quite general use of antitoxin by the practicing physicians of this State. Extremely little dissent is heard in Maryland concerning the value of this specific remedy, and this circumstance is exceedingly creditable to the medical men of the State. Since local boards of health do not send full reports of prevailing sickness to the State Board of Health, we cannot estimate the saving of life which has been effected. From our laboratory reports and from the sickness cards returned to us we know something of the progress of the disease in Hagerstown and in Frederick City, both of which were heavily visited with diphtheria during the year. The losses from the disease were not heavy in either place. Several county boards of health provide antitoxin for indigent patients, Cecil, Queen Anne, Talbot, Prince George, Howard, Anne Arundel, and perhaps one or two others. An effort was made to get an appropriation for this purpose from the County Commissioners of Montgomery, but the result of the attempt is not known. The Carroll County Commissioners are said to have appropriated money for antitoxin, but in the absence of proof this may fairly be doubted, since ten doses of antitoxin would cost them as much as they are willing to pay their one health officer for a year's work.

The people of this State are, on the whole, more impressed with the claims of preventive medicine in respect to diphtheria than with regard to any other disease, except, possibly, small-pox.

MARYLAND PUBLIC HEALTH ASSOCIATION.

The Maryland Public Health Association has held two meetings since the last report and has witnessed the success of some of the enterprises which it helped to forward.

For various reasons it is impossible to publish the proceedings of the Association in the present report, but a few of the papers which are best adapted to our work of popular education in the practice of hygiene are printed at the end of this volume.

The meetings of the Association continue to arouse much popular interest, and each one leaves an enduring impress upon the public mind.

In but one respect has the Association failed of the purpose for which it was organized—it is not as well attended as it should be by the practical working health officers. This is chiefly due to the parsimony of local boards of health, who will not make the trifling appropriations necessary to enable their executive officers to attend the meetings.

The success of the Maryland Public Health Association, as a body of unofficial sanitarians, has attracted attention in other States. A full report upon our Maryland Association was made to the Conference of Associated Health Officers of Pennsylvania a few months since, and it was determined to engraft upon their own some of the features of our organization. We shall, I suspect, have to go to Pennsylvania to learn how the practicing official sanitarians may be induced to come together once or twice a year for mutual improvement.

THE EMERGENCY FUND.

The sum of one thousand dollars placed at the disposal of the State Board of Health by his Excellency, Governor Lowndes, remains unimpaired at this date. The last expenditure from this fund in May, 1897, has been more than replaced by interest upon the deposit.

REPORTS OF LOCAL BOARDS OF HEALTH.

COUNTY REPORTS.

ALLEGANY COUNTY.

DR. JOHN S. FULTON, *Sec'y State Board of Health.*

DEAR SIR: I desire herewith to make my report for 1889:

This year we have been particularly free from violent epidemics, and very few nuisances have been brought to my attention.

In the matter of vital statistics, I would state that, in my opinion, they will not be returned in full until some remuneration is made the physicians for so doing. I would also suggest that a fair compensation to the local registrars for recording the same should be allowed.

I find that I have registered 357 births and 128 deaths, hardly half of the number of each that have occurred.

I think that there should be a burial permit section inserted in the Registration Law, making it imperative that the certificate pass at once under the scrutiny of an official before the body can be interred.

There have been reported to me the following contagious diseases—all of a mild form:

Near Cumberland—Scarlet fever, 1; cerebro-spinal-meningitis, 1; typhoid fever, 2. Barton—Cerebro-spinal-meningitis, 1; typhoid fever, 8. Ellerslie—Diphtheria, 11. Lonaconing—Cerebro-spinal-meningitis, 2, with one death; typhoid fever, 1.

I have investigated a number of minor nuisances throughout the county, and succeeded in having them abated without difficulty, with the exception of one case at Mt. Savage, which is now pending before the Lower Court.

Respectfully,

C. H. BRACE, M.D.,

Cumberland, Md.

Health Officer for Allegany County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Allegany County (including the towns of Cumberland, Frostburg and Lonaconing—Diphtheria, 6; infantile diarrhoea, 19; pneumonia, 15; tuberculosis, 34; typhoid fever, 13.—M. L. R.]

ANNE ARUNDEL COUNTY.

DR. JNO. S. FULTON, *Secretary State Board of Health.*

DEAR SIR: January 2d I visited Menzel's dairy, about three miles from Annapolis, to inspect his farm to find some clue to the mysterious Holmes poisoning case, which occurred in this city. One child died, Holmes was insane for several weeks, and others were sick. Nothing was ascertained to clear up the case.

February 22, Dr. R. A. Hammond, "Jessups," reported a case of diphtheria, colored female, aged twenty years.

March 6th, Dr. J. B. Robinson reported one case of diphtheria near Brooklyn, also another February 24th.

May 25th, Mrs. Mary A. Murray, colored, midwife, registered. Postoffice, Shadyside.

June 21st, visited Brooklyn to investigate pig-pens, houses, alleys and lots; some were bettered, others will probably be settled in court.

June 25th, Dr. T. W. Linthicum reported two cases of diphtheria at the residence of Mrs. T. John Bowie, Annapolis Junction. June 30th the place was visited and disinfected.

July 6th, one case of typhoid fever occurred in my practice, colored boy, aged fourteen years. Visited Dr. Thos. H. Brayshaw, Glenburnie, to investigate six cases of diphtheria in the Miller family. Three deaths occurred.

July 10th, visited and disinfected the house occupied by Miller.

August 4th, visited Annapolis Junction to investigate three men who escaped the quarantine at Norfolk.

August 10th, Dr. R. A. Hammond reported Robert Oden, colored, of Harman's, had diphtheria, and he had immunized five others in the family.

August 23d, visited the Martin Wagner Co., to examine the water supply. Dr. Penniman reported the sample good.

October 30th, visited the residence of Mr. Charles Duvall, St. Margarets, to investigate cause of four cases of typhoid fever, all adults. Water was examined and found bad.

Very respectfully,

J. M. WORTHINGTON, M.D.,

Annapolis, Md. *Health Officer for Anne Arundel County.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Anne Arundel County (including Annapolis): Diphtheria, 8; infantile diarrhoea, 13; pneumonia, 18; tuberculosis, 32; typhoid fever, 8.—M. L. R.]

BALTIMORE COUNTY.

This report was made to the Baltimore County Board of Health by Dr. H. Burton Stevenson, Secretary, on October 11th, 1899:

In presenting the first report to the first meeting of a Local Health Board in Baltimore County, your Secretary wishes to call your attention to the present sanitary condition of the county, and the laws regulating sanitation (their advantages and defects), the present imperfections in the registration of births and deaths, and to offer a suggestion as to a remedy, to call your attention to the neglect of the infectious disease law, and the danger and cost to the county from that neglect.

Section 12 of Article 43, Revised Code of 1888, directs that the local boards of health for each county shall take cognizance of all unhealthy nuisances within the limits of its jurisdiction. Under this section I have abated about forty nuisances complained of, most of which has been done by correspondence. I have had recourse to law in but two instances, the cases now pending for the Grand Jury.

Section 14 of Article 43, Revised Code of 1888, makes it incumbent upon me to take all proper steps to suppress all existing epidemics, or to prevent an invasion by an epidemic into my jurisdiction, and empowers the Secretary of the State Board of Health to act with me and to exercise all the powers of the State Board of Health.

Under this section the epidemic of small-pox in May at Sparrow's Point was handled. We had fourteen well-developed cases, with no deaths. Vaccination of the whole town was ordered by me and endorsed by the Executive of the State Board. Those exposed to the disease were isolated and kept in an improvised detention hospital for eighteen days. The county officers lending aid in this matter, a complete vaccination of the inhabitants by your executive and the Maryland Steel Company, a thorough fumigation and cleaning of the infected area was sufficient to break up the epidemic.

Several epidemics of diphtheria were handled with almost as good results. Sparrow's Point, however, still has some diphtheria. The mingling of the population at work and impossibility of enforcing a complete isolation made this epidemic hard to handle.

I am now endeavoring to break up annual epidemics of typhoid fever in several thickly populated localities of the county.

Chapter 312 of the Acts of 1898 gave us the first law providing for the registration of births. This is the first attempt of the State to take legal notice of the birth of its citizens. I have devoted much time and energy to perfect these records, that posterity may have as complete records of its ancestry as the Record Office gives us of title to property. The records are still incomplete, although a fine for failure to report a birth, by physician or midwife, can be collected.

I would suggest that the next Legislature be requested to add a section compelling the health officer or local registrar to issue

birth certificates, and compel the parent or guardian to show the certificate upon application for admission to schools (or to a minister of the gospel or priest upon application for christening).

The same chapter providing for birth registration, makes compulsory the reporting of the death of citizens of the State by the doctor, coroner, or undertaker, and the fatal disease, and provides for a record of the same to be kept for the use of persons tracing ancestry, as well as mortality of diseases, for use as proofs of claims for insurance, pensions, etc., and gave a fine for failure to comply.

The correct estimating of the relations between births and deaths, or, in other words, the relative increase or decrease in the population of the county depends upon the completeness of these records. The value to the election officials is inestimable.

In order that these records may be complete I suggest that the next Legislature be asked to add a section to the law providing for a burial permit, and make it unlawful to bury a body without a permit from the health officer of the county. This system is in use in Baltimore City, where all burial permits are issued by the Health Commissioner.

Chapter 346, of the Acts of 1898, improved upon the laws back to 1890 relating to contagious and infectious disease. This chapter makes it incumbent upon physicians in attendance, hotel-keepers, keepers of boarding-houses, superintendent, manager or director of a public or private institution, to notify the local health officer of the existence of an infectious or contagious disease under his care or within his house, or under his management, in default of which the chapter provides a fine of not less than \$50.00 or more than \$200.00 (This law has no defects.) It, however, is not complied with by all persons concerned. Its advantages to the public health, public schools and public taxpayers is inestimable.

The neglect to report contagious disease in a neighborhood allows one case to develop into an epidemic, and makes the expense of controlling it great. The attendance at school is lowered; the death-rate increased in proportion to the death-rate of the disease. I would suggest that this Board take cognizance of all neglects to report contagious diseases and prosecute accordingly. An example or test case is now in the court, and a conviction will benefit public health, public schools and lessen expenses of the Health Board, and consequently taxes.

I wish to call the attention of the Board to the following action of its executive officer:

Every registered physician whose address was obtainable has been notified of the laws mentioned above and supplied with the necessary material for making reports.

I have asked the School Board to send copies of the Infectious Disease Law, furnished them by the State Board of Health, to

every public school teacher in the county, and have asked the School Board to notify all teachers to enforce the vaccination law.

I would respectfully suggest to your body that in order to keep the records of this office complete that you instruct the local sanitary officers of Canton, Highlandtown and Catonsville to report all vital statistics to the Executive Officer of the County Board of Health, thus having but one place for the recording of the vital statistics of the county.

I further suggest that a member of the Baltimore County Board of Health be sent to the meeting of the Public Health Association in Baltimore, November of this year, as a delegate to represent this Board, and to work for improvements in the health laws of this State and County.

I suggest that the next Legislature be requested to repeal Section 1, of Chapter 460, repealing Chapter 614, Sections 1, 2, 3, 4, and to re-enact Sections 117, 118, 119, 126, 128, 131 of Article 3, Code of Public Local Laws, title "Baltimore County," subtitle "Health and Sanitary Officers," concerning Canton, Catonsville, and Towson.

The following table shows the number of births, deaths and infectious diseases reported:

	Deaths.	Births.	Smallpox.	Measles.	Whooping Cough.	Scarlet Fever.	Typhoid Fever.	Diphtheria.	Mumps.
May	36	46	14	1	2	1	2	1
June	30	54	1	15	1	5	123
July	52	61	6	7	3	8	34
August	21	50	16	5	19	34
September	34	66	4	18	15	2
Totals	173	277	14	24	14	14	50	208	3

Deaths from diphtheria, 13; typhoid, 5; consumption, 17.

Respectfully submitted,

H. BURTON STEVENSON, M.D.,

Rider P. O., Md.

Health Officer for Baltimore County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Baltimore County (including towns of Catonsville and Highlandtown)—Diphtheria, 31; infantile diarrhoea, 34; pneumonia 69; tuberculosis, 85; typhoid fever, 27.—M. L. R.]

CALVERT COUNTY.

In the past year we have had six deaths from typhoid fever and twenty-three from consumption.

There were three cases of diphtheria and two of scarlet fever, but no death from either disease. None of the other contagious diseases have occurred. In no case did typhoid fever spread in a neighborhood beyond a single family. Diphtheria and scarlet fever each was confined to a single patient in the families affected.

The physicians in the county, without exception, use great care in isolating patients affected by any of the contagious diseases, and the friends of the sick willingly follow instructions given upon this subject.

The value of the work being done by the State and County Boards of Health and by the Public Health Association, in directing attention to sanitation and to isolation in cases of contagious diseases, may, I think, be seen here. In 1896, previous to the organization of our local Board and of the Public Health Association, in one neighborhood to which a case of typhoid fever was brought there were many cases following and thirty-one deaths resulted. This was in a thinly settled territory, four miles square. The disease has entered several different neighborhoods this year, but has not spread in any of them. Results have been as favorable with other contagious diseases.

It is unpleasant to have to report so many deaths from consumption. I think we may hope to lessen the mortality from this most fatal disease by disseminating information concerning it being spread through the sputa of affected persons, and concerning the importance of properly heating and ventilating homes, school rooms and places for public meetings, and by securing such physical training in the public schools as will give the best possible development of the lungs, the organs usually first invaded by the disease.

Our Board of Health has adopted all measures suggested, aiming to secure sanitary improvement.

The mortality rate for the year has been 11 to 1,000 of population.

Respectfully,

T. M. CHANEY, M.D.,

Dunkirk, Md.

Health Officer for Calvert County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Calvert County—diphtheria, 7; infantile diarrhoea, 7; pneumonia, 14; tuberculosis, 15; typhoid fever, 14.—M. L. R.]

CAROLINE COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

SIR: The soil of Caroline County being well adapted to the growth of fruits and vegetables has caused it to become a great

canning center, some sections of the county having as many as ten canneries within a radius of three miles.

The local health department has observed the growth of this industry very closely and notes the fact that typhoid fever and kindred diseases have been more prevalent in these localities, and in order to counteract it (if perchance it might be traced to this cause) passed an order that all canneries in the county should be cleaned up daily and limed. Where it has been strictly observed a marked improvement in the general health is the result.

There is a general awakening to the importance of this matter, and a number of complaints have been lodged from all parts of the county. Gentle reminders have been met with a willing compliance with the order.

Typhoid fever has been of a malignant type in some cases and some deaths have occurred but not above the average number in the aggregate. The cold winter of '98 and '99 did not entirely check its progress. Now there are but few cases and the general health is excellent.

Diphtheria broke out in the public schools of Ridgeley, but by a prompt closing of schools and an earnest co-operation of the Secretary of the State Board of Health and the local physicians no general epidemic occurred.

On opening schools cultures were taken from the throats of eighty-nine children, all in attendance, and four developed evidences of infection. Withdrawing these from school for treatment the chasm was bridged and no further trouble. These with three other cases in the upper and lower part of the county are all that have been reported. Only a few cases of scarlet fever have occurred and those of a mild type.

J. L. NOBLE, M.D.,

Preston, Md.

Health Officer for Caroline County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Caroline County—diphtheria, 7; infantile diarrhœa, 1; pneumonia, 7; tuberculosis, 12; typhoid fever, 14.—M. L. R.]

CARROLL COUNTY.

DR. JOHN S. FULTON, *Sec'y State Board of Health.*

DEAR SIR: I am very sorry that I cannot give you a complete and correct account of matters relating to the Health Board, but I will report them to you as they have been given to me.

Number of children vaccinated in the county is 7,761; births from April 1st to October 18th, 336; deaths from April 1st to October 18th, 218; no case of typhoid reported in this district

or in any other as far as I know; four hundred cases measles, seven deaths; ten cases scarlet fever, and no deaths; ten cases of whooping cough; forty cases of diphtheria, ten deaths.

I am in favor of passing a law requiring all doctors to give a burial permit throughout the State.

I am also in favor of a law regulating the salaries of the Health Physician, as it is one receives \$25 a year, which does not cover postage and envelopes, and others get \$400.

I also am in favor of all births being required reported under penalty of the law.

I also think all health officers should be paid at least twenty-five cents for recording births and deaths, which would create a fund for postage and envelopes, as quite a number neglect to report, as it is a loss of stamp and envelope every time they have to make a report.

I hope in another year my salary will be increased to such an amount that I will be able to do my duty, and compel others to do theirs.

I have visited the jail and almshouse, and find the condition of both very much improved since your last visit here.

I would also suggest that as there are quite a number of imbecile men and women in the almshouse (that is no place for them) that they be placed in some institution suitable, as the accommodations are very small and the care not the proper kind.

Respectfully,

JOHN SWOPE MATTHIAS, M.D.

Westminster, Md.

Health Officer for Carroll County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Carroll County—Diphtheria, 10; infantile diarrhoea, 4; pneumonia, 14; tuberculosis, 25; typhoid fever, 7.—M. L. R.]

CECIL COUNTY.

DR: JOHN S. FULTON, *Secretary of the State Board of Health.*

DEAR SIR: Regular monthly meetings are held to hear the report of the Secretary and to consider not only the diseases prevailing, but sanitary deficiencies likely to cause disease. The aim is to prevent as well as to suppress.

Statistics from October 1, 1898, to October 1, 1899.

Deaths from acute infections—diphtheria, 2; membranous croup, 4; remittent fever, 1; whooping cough, 1; measles, 1; erysipelas, 1; grippe, 4; tetanus, 1; puerperal fever, 1; total, 16.

Acute infections of a diarrhoeal nature—typhoid fever, 10; dysentery, 1; cholera infantum, 4; entero-colitis, 2; diarrhoea, 1; gastro-enteritis, 2; total, 20.

Tubercular diseases—consumption, 25; acute tuberculosis, 2; tubercular meningitis, 1; total, 28.

This does not claim to be a scientific classification. Typhoid fever is not always a diarrhoeal disease. The diseases grouped as acute infections are nearly all recognized by the public as such, and of a preventable nature. It shows 14.8 per cent. of the sum total.

While this may be overdrawn, the latter percentage is much nearer the real situation than the first; even the first demands that some further means be taken to overcome this scourge, which, in spite of our salubrious climate, is so prevalent in Cecil County. Classing it as an infectious disease, which it is, the 28 due to this cause and the 36 acute infections, 64 in all, make 26 per cent. of preventable deaths. The Health Board has made use of every opportunity, including an address at the Teachers Institute and the Farmers' Institute, of calling the attention of the public to the infectiousness of this disease and the means of prevention.

Record of Some Infectious Diseases.

OCTOBER, 1898, TO OCTOBER, 1899.

	October.	November.	December.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Total.	Recovered.	Died.
Typhoid fever.....	13	10	6	..	2	2	9	3	1	4	4	10	64	54	10
Diphtheria	9	2	2	3	..	1	2	..	1	..	1	21	19	2
Membranous Croup.	2	2	3	7	3	4
Scarlet fever.....	7	..	2	2	..	4	1	..	16	16	..

Particular attention has been given the above-named infectious diseases, and few cases, indeed, have escaped record. Antitoxine was used in nearly all the cases of diphtheria which recovered; it was not used in the fatal cases. The cases of membranous croup were regarded as diphtheria, though they all occurred between December 20 and February 8 during the cold weather. Antitoxine was used in the cases which recovered and not in those which died. Antitoxine is furnished indigent patients.

Typhoid fever is always with us. The death rate, 15.6, is higher than it should be. A great majority of the cases could be traced to impure water supplies. While we have not statistics for two full years, having commenced July 1, 1898, it appears from a comparison of seasons that there are many new centres of infection for 1899, and that the disease is more prevalent in the towns than in 1898.

In April the Board, fearing an epidemic of this disease, respectfully invited the Presidents or other representatives of the Town Councils to meet with the Board in May for discussion and the adoption of timely preventive measures. But two responded to the invitation. The towns urgently need local health boards.

The Town Council of Elkton, in July, passed an ordinance requiring a periodical cleaning of privies, sinks, cesspools, etc., in place of the universal stereotyped post mortem ordinance, which directed a cleaning when they "become offensive to the neighborhood." This ordinance might well be copied by the other towns. It and the improved drainage account for the remarkable decrease of cholera infantum, dysentery and other diarrhoeal diseases during the summer of 1899, and a decline in the death rate of the town from nearly nineteen to about fourteen per thousand.

The County Commissioners have turned the public vaccination business over to this board for regulation; bills are paid only for effective vaccinations to physicians who are up to date in their reports of births, deaths and infectious diseases.

The majority of the physicians report births and deaths promptly but much value is detracted from this good work by the derelicts who send in late and incomplete reports. The above statistical report of deaths is not full. We have endeavored to make it so by letter and personal solicitation, but it is impossible for one health officer in a county to get a full report without the cheerful co-operation of the physicians.

A burial permit should be required in all cases of interment. It should be issued upon the presentation of a proper certificate upon which the physician should write in the cause of death, after the other data are collected by the family or the undertaker.

Respectfully,

HOWARD BRATTON, M.D.,
Health Officer for Cecil County.

Elkton, Md.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Cecil County—diphtheria, 5; infantile diarrhœa, 29; pneumonia, 30; tuberculosis, 36; typhoid fever, 12.—M. L. R.]

CHARLES COUNTY.

At present Charles County is in a very healthy condition so far as I can learn. During August and part of September quite a number of cases of typhoid fever were reported by Dr. Cornish Spencer in the neighborhood of Bel Alton, on the Baltimore and Potomac Railroad. No deaths were reported to me from the above-named disease. It seems that an old well which had been in use for quite a long time without being cleaned was the cause of a number of the cases. I ordered this well closed for a certain period, and no more cases were reported except two from Bowie, Md.

We have had quite a number of malarial cases, but very mild in character.

Scarlet fever made its appearance in the neighborhood of Pomonkey about the last of September, few were effected and no deaths; cases very mild.

It seems to be quite a task to impress upon the minds of parents the importance of vaccination, and a great many are keeping their children from school because they cannot be admitted without producing a certificate of successful vaccination.

I have forwarded to you all the death and birth cards I have received from physicians in the county, and very few physicians pay any attention to this law, as no compensation is allowed them for the trouble and expense of same. I think a very wise plan would be to have an officer to whom persons should be compelled to apply before burying their dead. I know of persons having been buried in this county with highly contagious diseases, and the same was never reported to the health officer and no attention was paid to the matter whatever. People innocently went to the funeral without knowing the danger they were running in doing so.

Very respectfully submitted,

C. L. CECIL, M., D.,

Wicomico, Md.

Health Officer for Charles County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Charles County—diphtheria, 4; pneumonia, 4; tuberculosis, 9; typhoid fever, 8.—M. L. R.]

DORCHESTER COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR SIR: It is impossible for me to make a full and intelligent report of the health and vital statistics of Dorchester County, owing to the fact that comparatively few physicians and midwives take any interest or trouble to report the same to me. Nevertheless, I know that there is a decided improvement since you have taken charge of the office of Secretary to the State Board of Health, and I hope you will be continued in the same.

It is my opinion that the reporting of births and deaths should be made compulsory and paid for by the State. If, as is justly claimed, vital statistics is of such great importance and value to the State, why not have a general State law, uniformly fixing the salaries of health officers in the counties, according to the size and population of the same, and paid for by the State? Now the health officers, who are expected to go from one part of the counties to the other, depend upon the various boards of County Commissioners, who, in many cases, know nothing and care less about health officers.

So far as I am informed, the health of the people of Dorchester County for the past two years has been exceptionally good. No epidemic of the dreaded contagious diseases have made their visit to our county. A few sporadic cases of diphtheria occurred on Taylor's Island and near Madison last winter and spring. Thanks to Dr. B. L. Smith for his prompt action, by which the disease was soon crushed out.

Quite a number of cases of typhoid fever occurred in the city of Cambridge during the summer and autumn; but Dr. John Mace, Health Officer there, will doubtless report to you. There have been several cases of typhoid fever in Vienna, while not a single case has developed in the towns of East New Market and Hurlock this year.

We are exempt from the slaughter-house nuisance in East New Market.

Vaccination has been more general this season than in the past. Nevertheless, the pupils of two schools in District No. 2 have not yet been vaccinated, owing to the ignorance and prejudice of teachers and parents, who have been informed by a prominent lawyer of Cambridge, so I understand, that the vaccine law applies only to cities.

It would be very convenient to have all the laws referring to health, vital statistics and vaccination codified and published in one volume, for the use of health officers and others.

Yours truly,

GEO. P. JONES, M.D.,

East New Market, Md. *Health Officer for Dorchester County.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Dorchester County (including Cambridge)—Diphtheria, 6; infantile diarrhoea, 9; pneumonia, 2; tuberculosis, 11; typhoid fever, 16.—M. L. R.]

FREDERICK COUNTY.

DR. JOHN S. FULTON, *Sec'y State Board of Health.*

MY DEAR DOCTOR: Owing to the unsatisfactory registration of births and deaths in Frederick County, I regret exceedingly my inability to make out a statistical report that would prove of any practical value to your Honorable Board. Since a current account of deaths, with special references to causes, is a matter which all sanitarians are deeply interested, this is most unfortunate.

That you are entirely familiar with the defects in the Registration Law as it now stands, and that you will call special attention to the same in your report I have not the slightest doubt, since your experience must have convinced you that without a burial-permit section added to the present law it will remain practically valueless. To be effective, said permit must be made a necessary preliminary to the disposal of the dead body. Such permits would naturally be made out at the time and place of death in the presence of the family, who could give any information desired. It would rapidly follow the event, its importance would be more fully recognized and its prompt return greatly facilitated—all of which are essential. It is simply the key to the situation in the rational solution of the whole question. Returns to be of any practical value must be prompt, full and accurate.

The proper disposal of dead bodies is of, and in itself, as a sanitary measure alone, of great importance. In my circular-letter to physicians I called attention to, and condemned the custom in vogue in some sections of the county, of taking corpses into the churches, without any discrimination as to cause of death, there to remain whilst the funeral sermon is being preached, then the casket is opened, and all the curious men, women and children are invited to view the remains. In this way all are brought into direct contact with, and caused to inhale, the poisonous emanations arising from the dead body. The church is infected with the germs of disease, and without disinfection is left to remain a source of danger for weeks or months to come.

Persons dying of contagious or infectious diseases should be promptly interred by authority of the State or Local Boards of Health in accord with some uniform rule least likely to give offense to the relatives and friends, and at the same time, best calculated to protect the living.

It is useless to counsel isolation if such nuisances are permitted to continue unabated.

One other cause of the failure in the registration is the lack of adequate compensation. The State is fully able to pay for all services faithfully performed by her citizens. You cannot expect efficient service without adequate compensation. There should be a uniform fee commensurate with the intelligence required, as well as the actual labor performed. The Register of Wills is amply provided for, as he should be, by the emoluments of the office. It is unreasonable to expect the Register of Births and Deaths to perform his duties gratuitously, and as I plainly stated in my report to the County Board, I seriously question the legality of the Act which would compel them to do so. I find the physicians of the county willing to co-operate and do their duty if fairly treated.

If the State and counties are too poor or niggardly to appropriate the means necessary to properly protect the lives of her citizens, the war had better be declared off, we had better raise the yellow flag and retire before the preventable diseases are invading our homes and firesides. This would be cowardly, it would be un-American. Since the war is on let it be a fight to the finish. The friends of sanitation have boldly stepped forth into the arena, they are there to stay.

The State Board has had measurable success as fully demonstrated in suppressing and warding off serious epidemics. Let the good work go on; let it be appreciated as it should be by all good citizens. Let the judiciary of the State express themselves. They should define the law as well as their position. Society is being outraged by nuisances persistently maintained. They are the natural guardians of society. The weak and defenseless appeal to them for protection. Let it be known that to persistently maintain a nuisance is a crime against humanity as well as decency and that such persons will be dealt with as criminals. Let it be known that the law is not to remain a dead letter upon the statute books, but that it is to be enforced, that offenders are to be punished. Let the attention be sounded from the bench, then we will sound the forward and move in solid phalanx against the common enemy.

One serious epidemic would cost the State more in treasure alone, besides other interests involved, than it would cost to effectually protect the State for a generation. Let us arouse the citizens of our State to the dangers and perils of the situation, lest some terrible epidemic invade our borders and we have ocular demonstration of our wanton cruelty. Let the efficiency of the State and local boards be perfected by liberal appropriations. Let all good citizens co-operate with us in our efforts to protect society. The vital question of life is involved in the issue. If the strong will not, the weak and defenseless cannot, defend society against preventable diseases.

Since my last report, bearing date of January 2d, 1899, with the exception of an epidemic of measles in the northern section of our county early in the year, no serious epidemic has been reported. Sporadic cases of scarlet fever from different sections of the county have been reported from time to time. Typhoid fever generally of mild type has prevailed, but not to the extent of former years.

Vaccinations, owing in a great measure to the repeated warnings of the State and Local Boards of Health, have received more attention than ever before in the history of the county, at least in the absence of an epidemic of small-pox. As a result of our precautionary measures not a single case of this dreaded disease has been reported.

The sanitary condition of the county is good as compared with other years. Many nuisances have been, and are still being reported. I am using my best efforts to have them abated.

Diphtheria of severe type is now prevailing in the vicinity of Lime Kiln Postoffice, Buckeystown District, several deaths having been reported. Isolation is being enforced, antitoxine is being employed both in the treatment and as an immunizing agent, and every effort is being made to stamp out the disease, which is chiefly confined to the colored population, who, as you know, are entirely ignorant of sanitary measures, and consequently are troublesome to manage. They are being treated very properly by the physicians in charge, who are getting the disease under control. I do not anticipate a spread of the disease beyond its present bounds nor its long continuance.

Since my last report I have recorded and sent to your office 190 certificates of births—of these 91 were white males, 74 white females; among these there were 6 white still births, all females. Colored births—living, 17; male, 8; female, 9; colored still births, 6; male, 1; female, 5. Deaths—whites, 128; males, 68; females, 60; deaths, colored, 23; males, 10; females, 13.

All of which is most respectfully submitted,

DAVID M. DEVILBISS, M.D.,
Woodville, Md. *Health Officer for Frederick County.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Frederick County (including towns of Brunswick and Frederick)—diphtheria, 8; infantile diarrhoea, 17; pneumonia, 9; tuberculosis, 49; typhoid fever, 9.—M. L. R.]

GARRETT COUNTY.

JOHN S. FULTON, M.D., *Secretary State Board of Health.*

SIR: I will try to give you a short outline of the sanitary condition of Garrett County during the last year.

The latter part of last winter and early spring we had quite a good many cases of la grippe, followed in some cases by pneumonia. During the year we have had some diphtheria in different sections of the county, and a number of deaths have been reported. At this time there are none to my knowledge. Whooping cough is now reported in Deer Park and vicinity. The last two or three months typhoid fever has been reported in different localities through the county, most of it being in the village of Crellin, some four miles west of Oakland, fifteen or more cases having occurred in that place, but no deaths reported there up to this time. The village of Crellin is situated on low land and partly surrounded by the waters of the big Youghheghany River and Snowy Creek. The sources of water supply are springs and wells, which, during the late dry weather, have become very low and impure, and no doubt have furnished the cause of this sickness.

So far as vital statistics are concerned, I have sent to you, from time to time during the year, all that have been reported to me. I am aware that the reported births and deaths fall far short of the total in the county. The fact is, it seems impossible to interest the members of the medical profession of this county in this work. Some send in a report one month, then wait one, two or three months before sending another, thus making statistic reports a practical failure. Births are reported more promptly than deaths. The failure in reporting deaths can be attributed to nothing less than wilful neglect, to say the least of it. I believe a burial permit section in the registration law would have a good effect in securing death reports throughout the county and smaller towns.

A *fair compensation* ought to be allowed local registrars for work of recording the certificates. It is only a simple business question as to how much it should be.

Outside of cases above reported, the general health of the county has been good throughout the year. And I may say that at present our sanitary condition is very favorable.

Respectfully, etc.,

W. H. RAVENSCRAFT,

Oakland, Md.

County Health Officer of Garrett County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Garrett County—Diphtheria, 9; infantile diarrhoea, 2; pneumonia, 33; tuberculosis, 7; typhoid fever, 4.—M. L. R.]

HARFORD COUNTY.

DR. CHAS. A. HOLLINGSWORTH, Health Officer. No report.

[Reports on file at the office of the State Board of Health shows that between July 1st, 1898, and June 30th, 1899, there died in Harford County (including towns of Aberdeen and Havre de Grace)—diphtheria, 8; infantile diarrhoea, 6; pneumonia, 8; tuberculosis, 31; typhoid fever, 13.—M. L. R.]

HOWARD COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR SIR: In compliance with your notice, I desire to send my report for the current year. There have been a good many cases of typhoid fever in the county, and it seems to be on the increase for the past two weeks. At Elkridge there are quite a number of cases reported by Dr. Eareckson at this time, but as more than half the doctors in the county fail to report their cases I cannot give the number.

There have been a good many cases of diphtheria in different sections of the county. Dr. Shipley reports a number of cases near Alpha. Dr. Linthicum has had a number of cases near Savage. I had five cases in a family in my practice. These were from a case brought from Catonsville, Baltimore county.

Quite a number of cases of scarlet fever have been reported in different parts of the county, but nowhere has it assumed an epidemic form.

I have succeeded in getting the School Board aroused in the interest of vaccination, and teachers have been notified that they will be held strictly accountable for any violation of the law.

In reference to the "vital statistics" law, it is impossible to get anything like a full return while the doctors do not pay attention to the law. In my opinion a sufficient time has been given them, and if the law is any good it ought to be enforced. The undertakers in the county are helping us very much, as I now think all of them are reporting every burial they have. I think it would only be necessary to make an example of a few to open the eyes of all to the necessity of obeying the law.

We need more legislation for the State Board of Health and more funds to carry out the laws they have, and laws to assist them in protecting the health of the public. I think a registry law requiring a burial permit from the health officer of the city or county, to be given upon receipt of a certificate from the doctor attending the case; the undertaker to give the blank to the family to be filled by the doctor, and then taken to the party designated by the health officer and a burial permit ob-

tained, the undertaker inclosing them to the health officer. This would at least give full return of deaths.

Very respectfully,

THOMAS B. OWINGS, M.D.,

Ellicott City, Md, *Health Officer for Howard County.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Howard County—Diphtheria, 5; infantile diarrhoea, 30; pneumonia, 33; tuberculosis, 26; typhoid fever, 5.—M. L. R.]

KENT COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

SIR: The law creating local boards of health requires an annual report of the Secretary (or executive officer). As the Board and its affairs in Kent County depend entirely upon the actions of the Secretary, and as no meetings for hygienic or sanitary purposes are ever held, the minutes of the proceedings are, of course, not essential or at all important. Matters requiring the advice or assistance of the Secretary have been promptly dealt with. Various nuisances, unhealthy conditions, bad odors, unsightly surroundings, unsanitary affairs in general, public and private, have at once had attention, and I am sure good has resulted therefrom.

Notwithstanding, however, the frequent publication of cards of advice, directions for the guidance and help of those so badly in need of assistance during the past year and in former years, I regret to state that a lively interest in such work has not been awakened. We do not despair, however, for as the needs of such things are more forcibly and urgently brought to public attention, the more certainly will good result. The ability to hide behind their own acts, and the almost certainty that no financial or punitive harm will come to them makes persons and corporations bold and negligent. A stronger, more active and much further-reaching law is needed; I trust we will get it.

About the usual number of complaints of various kinds have reached this office during the year. Some of them have been of real moment, others of such trivial nature that they have been allowed to lie quiescent, and nothing more was heard from them.

I have from time to time visited the various sections of the county, especially the towns and villages. Tolchester and Betterton, as summer resorts, have been under consideration. I have found as satisfactory a state of affairs as could be expected, with ample room for improvement. Betterton was the source of complaint lodged with the Secretary of the State Board of Health, Dr. Fulton, who turned it over to me. An inspection showed the abatement of the chief nuisance complained of, though the

continuance of the habit of pouring their waste and sewage into a common ditch, or run in a depression between the great hills at that place, will surely in time, contaminate the water supply, a matter to be greatly regretted, as there are several admirable springs at that point that should be protected.

The hog-pen question is still to the front, not only in the rural sections and unincorporated villages, but in the incorporated towns as well. Nothing can be done in this line without the passage of laws, county and municipal, that puts them solely and strictly under supervision of the Health Officer.

The water supply of farms in Kent is a serious matter. I believe the water-bearing stratum of our county is more than good. The pollution is due to lack of care and a total disregard of the value of an abundant and pure supply of good drinking water. Too often the only well or pump on the farm is at the barn yard fence, and examinations have time and again shown that the family was drinking diluted fecal matters from the cattle, and an abundance of well watered animal urine. In former reports this matter has been referred to, and at the meetings of the Maryland Public Health Association has been well ventilated.

I had the pleasure of attending the late meeting of the above association in November last as the representative of our Board. I am sure the good work it is doing will have a decided impress on matters sanitary, and hope the people of Kent will help the cause along.

The establishment of a bureau of vital statistics, with branches in the counties, has not during the past year resulted as I hoped. The first year the doctors of the county made their birth and death reports with creditable promptness, for the past six months great negligence has been the rule. I have sent written requests at frequent intervals urging them to make returns, with only a moderate degree of success. The value of vital statistics is unquestioned. That they should be full and complete is necessary—to get them so requires more stringent laws.

A committee (I am a member) was appointed at the last meeting of the Maryland Public Health Association to urge the passage of a law by the Legislature at its next session, requiring the possession of a burial permit issued by the Secretary of the local Board of Health before a deceased person can be buried, and making it unlawful to fail to comply. This would compel the doctors to at once report the death to the Secretary, also would make the undertaker unable to carry out his work without such a certificate. Such a law would entail a greater amount of clerical work on your Secretary, but would surely accomplish its purpose. This is no new thing, as all the cities have such a law.

During the year we have had the usual number of cases of illness from various causes. Catarrhal diseases during the severe weather of last winter and on into the spring months were reported. At a number of places contagious diseases have made their appearance. Scarlet fever, German measles, and a few cases of diphtheria have been reported. Typhoid fever from midsummer until now have been of too frequent occurrence and furnishes a sad commentary on our lack of hygienic knowledge and sanitary practice. Chestertown and the sections around Still Pond have been the favorite locations for the most dreadful and at the same time most preventable of diseases. The water supply of Chestertown has been thought to be responsible. An examination certainly showed it to be unfit (for weeks) for drinking purposes. I am glad to say every possible effort has been made on the part of the owners, with my co-operation, to place it where it should be at all times.

Several schools have been closed during the year because of the presence of scarlet fever and diphtheria among the scholars, the school authorities acting promptly when I have asked them.

I append below a list of all cases of contagious and infectious diseases reported to me. I am quite sure it is incomplete and will be so until some plan is adopted to make it absolutely obligatory on the part of the doctor and head of families to make prompt returns. I am unable to give the number of deaths from the various diseases, as the reports are so incomplete. Death reports have always been fuller because of the undertakers' reports which frequently duplicate those of the attending physician.

Typhoid fever, 40; scarlet fever, 16; measles, 0; whooping cough, 0; diphtheria, 3; German measles, 5.

Births reported from January 1st to November 30th, 1899, 178.

Deaths reported from January 1st to November 30th, 1899, 175.

Yours very truly,

W. FRANK HINES, M.D.,

Chestertown, Md.

Health Officer for Kent County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Kent County—diphtheria, 3; infantile diarrhoea, 15; pneumonia, 12; tuberculosis, 24; typhoid fever, 9.—M. L. R.]

MONTGOMERY COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

SIR: The health of our county has been remarkably good. A few cases of typhoid fever, measles and diphtheria, much less than formerly, mild and easily controlled. I have not seen a case of typhoid fever this season.

Early in August I was asked by Dr. Anderson to visit a colored family below Rockville. I discovered one case of scarlet fever and three others had the same disease. They were isolated; no spread, no fatalities.

The first week in September I visited a family in Denrod and found a case of scarlet fever, and told the family to remain at home. In a few days I had a message from the teacher of the school that children were coming from the infected house. I went there that day and told the teacher not to admit any child from this house or any other house if there was any extension of the disease. It appeared in two other families. They were isolated, and all recovered.

The reports of contagious and infectious diseases are far below what they should be.

"The function of vital statistics, which is of the highest use to the sanitarian, is to furnish true, full and fresh information concerning the causes of death. As to the cause of death, only a physician can testify with authority, and he will speak most authoritatively if his record be made at the time and place of death.

There is but one way to insure immediate registration, and that is to forbid any disposition of a dead body until a proper record is returned. The burial permit is the key to prompt registration, and without it no vital statistics law can be economically operated. I sincerely hope that the next Legislature will make such provision in an amended law.

Another important detail is the fair compensation of local registrars for the work of recording the certificates. I think a fee of fifteen cents for each complete record made is little enough remuneration.

Respectfully submitted,

E. E. STONESTREET, M.D.,

Rockville, Md.

Health Officer for Montgomery County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Montgomery County (including town of Kensington)—Diphtheria, 11; infantile diarrhoea, 7; pneumonia, 10; tuberculosis, 13; typhoid fever, 10.—M. L. R.]

PRINCE GEORGE'S COUNTY.

JOHN S. FULTON, M.D., *Sec'y State Board of Health of Maryland.*

MY DEAR DOCTOR: Since assuming the duties of the County Health Officer of Prince George's County last May, very little has transpired to attract special attention. In several localities of the county we have had some cases of scarlet fever and diphtheria, but by the prompt and skillful treatment of the physicians

• in these several localities the disease was soon under control, and the number of deaths not very great. The local Health Board has at all times given liberal aid whenever requested, and heartily co-operated with the physicians of the county to prevent a spread of any contagious disease.

I have found considerable difficulty in getting the physicians of the county to report the births and deaths in their practice, although I have supplied them whenever requested with the necessary blanks. There is no compensation attached to this duty, and some seem unwilling to do it, unless paid. It is questionable to my mind whether we can ever get a satisfactory report of these cases, unless there is some better provision than now exists. I know of several physicians of the county who have not reported a birth nor a death since I took charge of the office.

I think an additional compensation should be allowed the local Health Officers of the counties, and require them to keep an accurate account with the physicians of their territory, and pay them a small compensation, say fifteen cents, for each birth and each death reported. I am led to this suggestion by the fact that I have received from three of our physicians letters asking me what compensation would be allowed them for this work. Many of our physicians, however, are very prompt in their reports.

I suggest that you call a special meeting of the Health Officers of the counties of the State, to be held early in January, and some decided action be taken to obtain better legislation in this particular point.

Another matter which I desire to call attention to is the law which requires all children to be vaccinated before attending the public schools. This law is not properly carried out, and several times since last May my attention has been called to bills for vaccinating sent to the local Health Board by some of the physicians of the county. The local Health Board of this county has, however, adopted means by which this trouble will be obviated hereafter.

I am, very truly yours,

L. A. GRIFFITH, M.D.,

Upper Marlboro', Md. *Health Officer Prince George's County.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in Prince George's County—Diphtheria, 17; infantile diarrhoea, 9; pneumonia, 17; tuberculosis, 29; typhoid fever, 21.—M. L. R.]

QUEEN ANNE'S COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

SIR: I have the honor to submit herewith the second annual report of my stewardship as Health Officer for Queen Anne's County.

In presenting this paper for your consideration, it is my object to briefly set forth only the actual conditions as found in my administration of the office during the current year, together with such suggestions as may seem to me relevant and important.

If we accept the following statements as embodying the whole truth regarding the health and general sanitary conditions of my county, I am sure we must make a most satisfactory showing and compare quite favorably with any other section of the State.

The reports received from the physicians of the county, as far as heard from, supplemented by personal observation and diligent investigation, compel me to make favorable indeed complimentary comment upon our present health conditions.

The outlook certainly is most flattering and encouraging. Year by year there is an unmistakable and steady decline in our old time enemy, malaria, until now it may be safely classed among the incidental or accidental complaints of this region.

Since my last report (January 1st, 1899) there have been seen by, and reported to me, but 9 cases of typhoid fever, 5 cases of scarlet fever, 1 case of diphtheria and 1 case of chicken-pox.

Not a single case of continued malarial fever and very few cases of "chills and fever."

Cases of tuberculosis have not been reported, though I have knowledge of several. This class of diseases seems to have been ignored by the physicians in their reports except when embodied in a death certificate, after having thus ceased any longer to be a centre of infection.

During the past year the county has been visited by no epidemic form of disease at any point. Contagious and infectious diseases of a mild and sporadic character have appeared from time to time in different sections of the county; but, under the prompt and intelligent management of our local physicians, they have been speedily and effectually controlled.

While a majority of the physicians of the county have manifested a willingness to comply with the vital statistics law, I still have abundant reason to regret, and even to complain, of an incompleteness along this line that must render our statistics unreliable, if not actually misleading: yet I am gratified to note some improvement touching this important matter within the past year.

Going back to the beginning of my incumbency (May, 1898). I find that I have reported to you one hundred and eighty-two (182) deaths and two hundred and ten (210) births.

I append the following table showing the number of deaths between given ages, viz:

Within the first year.....	34
Between 1 and 5 years	13
" 5 " 20 " 	17
" 20 " 40 " 	37
" 40 " 60 " 	29
" 60 " 70 " 	30
" 70 " 80 " 	18
Beyond 80 years.....	4
Total.....	182

I am glad to be able to report the very satisfactory sanitary condition of our Almshouse and Jail. Frequent visits of inspection show intelligence and willingness regarding the management of these institutions that are creditable to those in charge.

During the incumbency of the present Sheriff—covering, as it does, a period of two years—there has not a case of primary sickness of any nature occurred within the Jail.

The Almshouse is a model of sanitary excellence, carefully managed by a Board of Trustees and attending physician (Dr. J. A. Holton), in every way fitted for such an important and responsible duty. The Board and the inmates are most fortunate in having in their Superintendent (Mr. Jester) a most competent and humane person.

I am still of the opinion that the Insane Department is a mistake. I become more convinced each year that almshouses under present management and control are not proper places for the insane.

The schools of my county are universally in a most favorable and satisfactory condition. The sanitary and hygienic management is carefully looked after by a most intelligent and painstaking corps of teachers, under the watchful eye of their popular and efficient superintendent, Mr. L. L. Beatty.

I am more than gratified to be able to report very satisfactory results concerning the present water supply of Centreville. As you are aware, there were sunk artesian wells here during the past winter and spring to supply for the needs of our citizens for all purposes an abundance of pure water.

We have succeeded in satisfying every wish along this line. At a depth of four hundred and fifty (450) feet we found an ample supply, yielding under the pump four hundred and fifty (450) gallons per minute of clear and absolutely unobjectionable water, as good for all purposes as can be found on this shore.

We did not get a surface overflow, but only a few feet below there is quite an abundant overflow, sufficient to keep filled, except under unusual demands, a capacious hermetically sealed reservoir, which is always filled and ready for any emergency, such as fires, etc., though the usual supply for the town is pumped directly from the well.

Unfortunately we have no sewerage system to supplement and augment the great blessing incident to this grand water supply, to this extent at least diminishing and destroying its beneficence. The town of Centreville is exceptionally well situated for drainage. Elevated about sixty or seventy feet above sea level, with a decided slope both ways to tidewater, it offers an ideal condition and position for successful sewerage.

In the work performed by me as local Secretary during the past year I have been encouraged and sustained with greater unanimity than was my earlier experience. However, there are not a few obstacles to a complete and untrammelled right-of-way along this line yet. It has been said, and no doubt correctly, that an enlightened public sentiment is sufficient to correct every wrong—sanitary as well as others. But how are we to bring about this enlightened sentiment—this greatly-to-be-desired result? By what means at our command can we so educate the public? I have asked the questions. I must let you answer them. I will say, however, that the general efficiency of the working powers of the State's Health Board are very seriously impaired by the unfortunate association therewith—too often—of politics, resulting quite frequently in failure to engage those best qualified for the duties, and more commonly still in the biennial changes of the local Health Officers, thus working to the disadvantage of all concerned, as well as to the desired results.

These appointments should be made upon merit, and by those best qualified to judge of their fitness. Why would it not be well for the Central or State Board to regulate these appointments? They (the State Board), being fully alive to the requirements demanded of them, and with an eye single to the accomplishment of best results, would certainly, let us hope, be actuated only by justice and right in filling the positions. How can the State Board hope to accomplish satisfactory or full results without the necessary support from the branches? Comprehending the importance of an intelligent and industrious corps of workers, it is necessary that they should be selected with such care, and after such an investigation into their fitness, as will insure, at least, an average that will guarantee the welfare and the credit of both the subject and your Board. This subject deserves the careful consideration of those in authority, whoever they may be. I am afraid, however, that this important and vital matter, touching, as it must, the very foundation of your whole work,

affecting, more or less, the interests of the entire State, can not, or will not, be satisfactorily adjusted or regulated until the force of intelligent or unbiased opinion, supplemented by legislative enactments, clears the way for it, divorcing it forever from all political alliances.

Speaking of legislation and law reminds me of another matter that should be amended to make it measurably effective, that is the registration law of this State. It must be obvious to all that it is radically imperfect along some lines at least. In its present form it is largely inoperative in its results, if the chief object thereof is the collection of full, accurate and, therefore, reliable statistics.

The importance of an efficient and comprehensive law regulating this matter is too apparent to need comment here. Such being the case why could not one element at least of the defect be remedied at the coming session of the Legislature? What would better accomplish this than a section requiring burial permits? This would insure fuller and more prompt reports for this branch of the subject.

I am inclined to believe that there are a greater number of unreported births (in this county) than deaths. This, in large measure, is due to the ignorant midwives, so called, who attend a large number of such cases among the lower class of whites and negroes, a large percentage of which escape registration altogether.

One can understand why the busy practitioner does not take a livelier interest in this matter of reporting his work when it is remembered that his valuable time is thus expended entirely without compensation. If it is a hardship in the case of the individual practitioner to perform *this* slight work gratuitously, it is a much greater imposition to require and to expect the local registrars to do their part entirely without compensation, and actually at a personal cost and outlay, when the labor is so much greater.

This is another feature of the law that might very properly be corrected as well as the very inadequate compensation received by the local Health Officers throughout the State.

In my last report to the Board of County Commissioners, sitting as Board of Health, I submitted for their consideration the following important suggestion, viz: That there should be provided, at one or more points throughout the county, houses of detention where tramp cases of contagious diseases could be confined and treated apart from the ordinary places, at present under their control (Almshouse and Jail). As we are now situated there is provided no place for such an emergency, however serious and far reaching might be the consequences. I regret to report no action taken by our Board.

This would very properly come under the consideration of the State Board, as your jurisdiction includes the counties. As prevention is the first purpose of a Board of Health, it will be eminently proper for such precautionary measures to be secured in every county of the State.

JAS. BORDLEY, M.D.,
Centreville, Md. *Health Officer for Queen Anne's Co., Md.*

[Reports on file at the office of the State Board of Health show that between July 1st, 1898 and June 30th, 1899 there died in Queen Anne's County—Diphtheria, 6; infantile diarrhoea, 8; pneumonia, 12; tuberculosis, 27; typhoid fever, 10.—M. L. R.]

ST. MARY'S COUNTY.

Dr. JOHN S. FULTON, *Secretary State Board of Health.*

SIR: I regret that we cannot report a more satisfactory compliance with the vital statistics law.

During the year only 68 deaths were reported and only one-half of the total number of registered physicians in St. Mary's made any reports at all. I think it fair to conclude that we have about 30 or 40 per cent. of deaths on our register.

Every physician has been supplied with cards with plain instructions how to make out a certificate of death, yet but a small per cent. have been made properly. Physicians do not take the time to answer all the questions, and in one instance even neglecting the name of person whose death they intended to report.

Midwives, when once informed of their duties, have made a better effort than the physicians. Unfortunately the majority of our midwives are illiterate and we cannot instruct them how to make a birth certificate, and, as they ask different persons to fill out the card, it depends on the intelligence of the families who employ them whether they are made out correctly or not.

According to the returns at hand, we have had three deaths from diphtheria and only one from typhoid fever; consumption and pneumonia claiming nearly a third of the total number of deaths.

Vaccinations are neglected. We advised members of School Board to admit into public schools none but properly vaccinated pupils, but no action was taken by School Board. Only a small per cent. of school children are vaccinated.

We have no large towns or villages and are rarely called upon to investigate nuisances.

We have had no epidemics during the year. Some cases of scarlet fever reported (not officially), but no deaths from that cause.

Physicians here claim that our vital statistics law, if enforced, would work a hardship toward the profession. To illustrate: If

a physician was attending a patient ten miles from his office and had no other patients in that direction, he is compelled, under the law, to ride ten miles to make out the death certificate if the patient dies. He cannot claim compensation from the family for this ride, and the State pays him nothing for it; yet he is under a penalty to do work for which he receives no compensation.

The undertaker should not be allowed to bury any body unless he has a death certificate properly made out by the attending physician, and that would compel some member of the family to go to the physician's office and get the certificate before burial would be possible.

L. B. JOHNSON, M.D.

Morganza.

Health Officer for St. Mary's County.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898, and June 30th, 1899, there died in St. Mary's County—Diphtheria, 9; infantile diarrhoea, 1; pneumonia, 12; tuberculosis, 12; typhoid fever, 7.—M. L. R.]

SOMERSET COUNTY.

No Local Board of Health. No report.

[Reports on file at the office of the State Board of Health show that between July 1st, 1898 and June 30th, 1899 there died in Somerset County (including Crisfield)—Diphtheria, 1; infantile diarrhoea, 1; pneumonia, 13; tuberculosis, 14; typhoid fever, 8.—M. L. R.]

TALBOT COUNTY.

Dr. T. A. Councell, Health Officer. No report.

(Reports on file at the office of the State Board of Health show that between July 1st, 1898 and June 30th, 1899 there died in Talbot County—Diphtheria, 2; infantile diarrhoea, 14; pneumonia, 9; tuberculosis, 27; typhoid fever, 6.—M. L. R.]

WASHINGTON COUNTY.

DR. JOHN S. FULTON, *Secretary of State Board of Health.*

MY DEAR SIR: My report of 1898 closed with reference to the presence of two cases of variola in Hagerstown, and it is very gratifying to state that the disease represented by these two cases (which by the way were in my own practice) did not extend beyond the house in which it was discovered. Isolation of cases, quarantine and disinfection, in which the family energetically and intelligently co-operated, checked further spread of this dreaded malady. Prompt action in quarantining Fulton

County, Pa., and general vaccination in and about Hancock doubtless prevented invasion of our State by the disease which during December, 1898, existed in the above-named locality.

Vaccination by the regularly appointed vaccine physicians, of which there are fifteen in this county, is as thorough and effective as could be desired under the present law. Their work is confined to the indigent and is done at the public expense. Our experience in this work reveals serious defects in vaccine legislation to which allusion was last year made. If the public money is to be thus used, to vaccinate the children of the indigent, in the expectation that thereby the community will be protected from small-pox, and at the same time there is no control over the children of those able to pay for vaccination, we are deluding ourselves into a false security from which we will some day have a terrible awakening.

It has become a subject of common observation among vaccine physicians that physicians give children certificates of vaccination at the time of the operation without subsequent inspection or knowledge of the genuineness of the vaccination. The child and parents, satisfied with the possession of a certificate of vaccination which admits to school, are indifferent to the worth or worthlessness of the so-called "vaccination." The doctor is the prime factor in this fraud upon the community, and his work, as circumstances suggest, should be subject to some supervision whereby the public could be secure in the protection which it seeks and which is its right to enjoy.

The general health of Washington County has not been subjected to any special disturbance during the present year. From January 1st to August 1st, 1899, there were 19 cases of diphtheria and 12 cases of scarlet fever in Hagerstown. From January 1st to November 1st, 1899, there were 31 cases of diphtheria and 15 cases of scarlet fever at various places in the county, outside of Hagerstown.

The plan of reporting cases to me by the attending physician and my immediate notification to the Superintendent of Public Schools, with his order to school teachers of exclusion from infected households, has greatly contributed to limiting the prevalence of these diseases. There was constant decline in the number of cases, so that from February 1st, 1899, to August 1st, 1899, there were but seven cases of diphtheria and six cases of scarlet fever in Hagerstown.

I am glad to report a much more general recognition of the value of placarding, quarantining and disinfecting as means to limit and suppress disease. The County Commissioners, acting under my suggestion, have purchased three formaldehyde generators, which have been placed in different sections of the county for use by physicians.

The operation of the vital statistics law in Washington County since September 1st, 1898, to November 1st, 1899, excluding deaths in Hagerstown since August 1st, 1899, shows 538 births and 292 deaths. In my opinion the State should either improve the law requiring the registration of births and deaths or abandon it. In Washington County the majority of physicians, often at great inconvenience and trouble to themselves, faithfully observed the law, making monthly reports of births and deaths. There are some whose reports are irregularly and incompletely made, and others pay no attention whatever to the law, having never made a report of birth or death.

The operation of the law thus reveals two classes, one yielding acquiescence to the request of the State for information which shall furnish an accurate birth and death rate, as well as establish the comparative prevalence of fatal diseases; the other ignoring the law and withholding information absolutely essential to the construction of vital statistics which shall truthfully represent conditions in Maryland, and as contemplated by the law. The failure of these delinquents nullifies the faithful work of others and renders the returns of little or no value.

During the past summer a "Sanitary Board" was organized in Hagerstown. It has been at work since August, and exercises jurisdiction in Hagerstown and the sanitary limits which extend half a mile beyond the corporate limits. You will note, therefore, that since August 1st, 1899, deaths and contagious diseases occurring in Hagerstown are not included in my report. The need of such an organization has been manifest, and as long since as May 6th, 1897, in a letter to the Mayor and Council, I urged the importance of its creation, and although, like many other good things, "it has been long in coming." I am assured the results of its work will be most valuable.

Very truly yours,

J. MCP. SCOTT, M.D.,

Hagerstown, Md.

Health Officer for Washington County

[Reports on file at the office of the State Board of Health show that between July 1st, 1898 and June 30, 1899 there died in Washington County—Diphtheria, 14; infantile diarrhoea, 10; pneumonia, 18; tuberculosis, 42; typhoid fever, 10.—M. L. R.]

WICOMICO COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR: Please find below report of number of cases of each: 33 typhoid fever, 37 typho malarial, 10 diphtheria, 13 scarlet fever, 15 measles, 20 chicken-pox, 7 mumps.

Yours respectfully,

C. R. TRUITT, M.D.,

Salisbury, Md.

Health Officer for Wicomico County.

[Reports on file at the office of the State Board of Health show that between July 1, 1898, and June 30, 1899, there died in Wicomico county of diphtheria 0, infantile diarrhoea 3, pneumonia 9, tuberculosis 27, typhoid fever 4.—M. L. R.]

WORCESTER COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

SIR : This county still sustains the reputation of being one of the healthiest in the State. This year has been an exceptional one, there having been but little disease of any kind, according to reports from physicians in the different sections of the county.

We have had a few cases of small-pox at Pocomoke City, being confined exclusively to the colored population. The first cases were imported from Norfolk. In all there were ten cases, resulting in but one death. By a rigid system of quarantine and general vaccination it was soon stamped out.

We have had also a few cases of typho-malarial fever of a mild type, with very few if any deaths.

The returns of the certificates of deaths and births to the Health Officer of this county have been so neglected that they afford no reliable basis for the computation of its percentage of deaths and births. Consequently there is an urgent necessity for a burial permit section to the registration law. We hope for a favorable consideration of this matter at the ensuing Legislature.

Respectfully submitted,

C. P. JONES, M.D.,

Health Officer for Worcester County.

Snow Hill, Md.

[Reports on file at the office of the State Board of Health show that between July 1, 1898, and June 30, 1899, there died in Worcester County from diphtheria 3, infantile diarrhoea 4, pneumonia 0, tuberculosis 28, typhoid fever 4.—M. L. R.]

REPORTS OF TOWN HEALTH OFFICERS.

ABERDEEN—HARFORD COUNTY.

Semi-annual report from January 1st, 1899, to June 30th, 1899-

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR: Whooping cough and measles epidemic during spring months.

One case of former, complicated with pneumonia, fatal.

No fatal cases of measles.

Scarlet fever, one typical case, Mabel Arthur, aged 12 years, April 30, recovered.

Diphtheria one, previously reported.

Typhoid fever, none.

Tuberculosis, none.

Infectious pneumonia, none.

Reports of births and deaths inclosed.

Respectfully,

J. H. KENNEDY, M. D.,

Health Officer for Aberdeen, Md.

December 12, 1899.

DR. J. S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR: Nothing worth reporting. No contagious or infectious diseases since July, when I sent in my report for first half of the year. I have seen but three cases of typhoid fever, one fatal. I find it very difficult to obtain the data to make out reports of births and deaths.

Very truly,

J. H. KENNEDY, M.D.,

Health Officer for Aberdeen, Md.

ANNAPOLIS—ANNE ARUNDEL COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR: In presenting my annual report I would like to be able to give a complete record of vital statistics for the year. But there exists so much apathy or unwillingness on the part of some physicians as to render such a record very unsatisfactory. The greatest obstacle to the collection of vital statistics

is that physicians think that they should be paid for such service. Certainly the local health officer ought to receive compensation, as it is oftentimes a considerable tax on his time and patience to record such statistics.

Perhaps the best way to obtain full and prompt reports of deaths—and the need of which I would particularly emphasize—would be the incorporation of a burial permit section in the Registration Law, thus compelling all undertakers or sextons to submit a certificate from the attending physician, coroner or other proper person, as the basis of a permit to bury such deceased person. I have endeavored to have our city council pass such an ordinance independently of a State law, and which is herewith appended:

AN ORDINANCE

To amend Article 21 of the City Code, title "Health of the City," by adding thereto an additional section, to follow Section 26, and to be designated as "Section 26 A."

SECTION 1. Be it ordained by the Mayor, Counsellor and Aldermen of the City of Annapolis, That a new section be and the same is hereby added to Article 21 of the City Code, title "Health of the City," to follow Section 26, and to be designated "Section 26 A," and to read as follows:

26 A. No dead body shall be buried from the City of Annapolis until a permit shall have first been obtained from the Health Officer, who shall receive from the Treasurer, by order of the Mayor, as compensation for issuing each certificate, the sum of fifteen cents. And the Health Officer is hereby required to keep a correct record of all such permits and report the same monthly to the Mayor, Counsellor and Aldermen. All undertakers or other persons in charge of the burial of said dead bodies, who shall neglect or fail to comply for such permit, shall be fined five dollars and costs, and in default of payment be confined in jail for ten (10) days.

SEC. 2. And be it ordained, That this ordinance shall take effect from the date of its passage.

EDWIN A. SEIDWITZ, *Mayor*.

PHIL. E. PORTER, *Clerk*.

Approved October 9th, 1899.

CONTAGIOUS DISEASES.

During the early part of the summer several cases of whooping cough developed in different sections of the city. In my opinion the widely spread epidemic was due to pupils in the public schools. No precautions having been taken by parents as to isolation, the prevalent idea seeming to be that this disease is comparatively trivial, and in but few cases, as far as I know, was any medical advice sought. The fatal termination, however, of a number of cases among infants should be a convincing, though sadly acquired knowledge, that whooping cough is by no means so trivial as to be ignored.

In the latter part of September four cases of diphtheria were reported, all recovered but one—an extremely malignant case; antitoxine was used with seeming benefit, but the child died from cardiac paralysis as a sequel to the disease. I saw two other suspicious cases in the same locality, but the peculiar bacillus did not develop, and both recovered.

During the course of this disease three cases of scarlet fever were reported, all being of a mild character. Thorough disinfection of premises by the formaldehyde regenerator was practised, and it is believed these dreaded diseases are stamped out, at least, in the infected places.

Considerable complaint was made during the summer against the quality of the water supplied to the city. It was so offensive to taste and smell as to render it unfit for drinking, cooking or bathing purposes. At the earnest solicitation of leading citizens the City Council adopted measures requiring the reservoirs and catch basins to be emptied and cleaned under the supervision of the Health Officer. The trouble was apparently due to organic matters being washed into the sources by prolonged rains. The trouble was soon remedied, and I have not heard of any cases of illness that could possibly be traced to the pollution.

From time to time many nuisances, principally foul water-closets, etc., were reported and abated. With energies ever on the alert, and with the hearty co-operation of a majority of our citizens, the sanitary condition of Annapolis is maintained at an excellent standard. It is renowned for the extraordinary longevity of its inhabitants, the death rate being about twelve per thousand, of which a large percentage was due to old age and accidents.

Very truly yours,

WM. S. WELCH, M.D.,
Health Officer for Annapolis, Md.

BRUNSWICK—FREDERICK COUNTY.

DR. JOHN S. FULTON,

Secretary and Executive Officer State Board of Health.

DEAR SIR: Herewith, as per your request, a resume of the operations of our Health Board since the date of our last report, January 1st, 1899. In our efforts toward sanitary reforms we are yet contending with ridicule and opposition, but, happily, these obstacles are diminishing in force, and we believe the continuation of a policy firm, yet prudent, will in the near future place the Health Board high in the estimation of all our people. Our accomplishments have fallen far short of our hopes and expectations. The consummation of some reforms seems at this time as far remote as ever.

We believe it safe to say that the Health Department has passed well through the experimental stage, and that it has taken its place as one of our permanent institutions.

Our physicians deserve great praise for their co-operation and the hearty manner in which they have complied with the requirements of the sanitary ordinance.

The system of reporting and recording deaths and infectious diseases is working to our complete satisfaction. The burial

permit contributes largely to the completeness of the death returns; in fact, we might say it is the key to the whole matter. Our local ordinance forbids the burial or removal of a body without a permit, and the result is such that we would recommend its adoption throughout the State.

The registration of births and deaths being of considerable value to the State, and at the same time a matter of labor and time to the health officer, we believe it but proper that the State should make some compensation for this work.

The matter of keeping hogs in towns and villages we consider a proper and desirable subject for State legislation. In fact, this appears to be the only solution to this question in view of the indifference and helplessness of the local authorities.

The biological supplies furnished by the State for the purpose of obtaining correct diagnosis in certain cases of suspected infectious disease have been valuable to the physician, patient and town generally. Our physicians have used these supplies freely.

Our inspections have been regularly made, and the sanitary conditions of the town has considerably improved.

Four persons were prosecuted successfully in the police court for maintaining nuisances on their premises.

Infectious diseases for the period beginning January 1 and ending August 31, 1899—Diphtheria, 1; cerebro spinal meningitis, 1; mumps, 4; typhoid fever, 1. Total, 7, against fourteen cases of all kinds for the corresponding period in 1898.

Deaths for the period beginning January 1st and ending August 31st, 1899—Abscess of brain, 1; apoplexy, 1; cancer, 2; cholera infantum, 1; child birth, 1; diarrhoea, 1; dropsy, 3; erysipelas, 1; heart failure, 1; meningitis, 1; neuralgia of heart, 1; old age, 1; pneumonia, 5; paralysis of pneumogastric nerve, 1; renal calculus, 1; cyanosis, 2; septicæmia, 1; railroad accident, 1; tuberculosis, 5; valvular deficiency, 1. Total, 32, against 26 for the corresponding period of 1898.

Yours, very respectfully,

H. S. HEDGES, M.D.,

E. L. HARRISON,

J. T. MARTIN,

Brunswick, Md. *Local Board of Health of Brunswick, Md.*

CAMBRIDGE—DORCHESTER COUNTY.

Dr. JOHN MACE, Health Officer. No report.

CATONSVILLE—BALTIMORE COUNTY.

Dr. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR SIR: I herewith transmit my report for Catonsville and First District of Baltimore County for year ending October 1st, 1899.

The statistical section of my report is nearly accurate, but, for various causes over which I had no control, not so accurate as I would wish. This community is so closely adjacent to Baltimore City, and the majority of those dying being buried in cemeteries within the limits of the city and requiring a permit, the attending physician's card reaches the State Board without passing through this office. Many of these certificates have been returned to me and recorded, but I am not sure that all have been.

To obtain a complete record, no body should be removed from the location where death took place without a permit from the local health officer, or registrar, and I sincerely hope that such a provision will be added to the present vital statistics law. If such a law is enacted at our next Legislature it will be of great benefit both in accurate collection and recording of death certificates and the reporting of contagious diseases.

Often the first knowledge the health officer has of the existence of diphtheria, etc., is from the certificate of death sent in, and it is often too late to prevent spreading of such contagious diseases.

Furthermore, if such a law were enacted the reports would be more prompt, as physicians frequently unintentionally forget a death that has taken place two or three weeks prior to time when he is required to send in his return. If a permit were necessary, the immediate filling out of the blank would ensure accurate record of cause, time and place of death.

There is no question of the value of a correct record of vital statistics, and to obtain same involves a great deal of work on the part of registrars, for which they receive no additional pay, having in this county to pay postage in sending returns to the State Board. I think that such work should be paid for. The registrar should receive a fixed fee for recording each card and an allowance for postage. Besides this duty, the registrars are compelled to forward a list of all males over 21 years to the Supervisors of Elections who have died in preceding months, for which service they receive no remuneration.

For the twelve months beginning October 1st, 1898, and ending October 1st, 1899, the following cases of infectious and contagious diseases have been reported to my office:

DISEASES.	October.	November.	December.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Total.
Typhoid fever.....	1	...	3	2	1	7	2	2	6	...	24
Pertussis.....	11	4	2	5	22
Scarlet fever.....	...	12	1	5	1	19
Measles.....	...	1	4	1	1	7
Chicken-pox.....	13	13
Diphtheria.....	2	...	1	1	4

By the foregoing table you can see we have had with us typhoid fever every month, except March, April and September. Six of these cases during the month of May were in one family. The State Board of Health investigated these cases, and suspected water used for drinking purposes as the cause. The polluted section of source of our public water supply being stopped, we had no other cases from this source until August. The cases in June and July were attributed to well water contaminated by living well cess-pools. The main pumping station of the Catonsville Water Company having been burned in July, necessitated a temporary return to the polluted source, and hence we find an increase in typhoid fever in August. September does not show a single case, and I hope we may be free from it the balance of the year.

Whooping cough was quite epidemic during month of May, more so than report would show, as the majority of cases did not require medical attention, and hence were not reported. With these exceptions the health of my district has been very good.

I have abated quite a number of nuisances, namely, those of sewerage, and it is only a question of time when some system of sewerage for the town will have to be instituted, but until the town is incorporated no really serviceable system can be built. The continued use of living well cess-pools and the resulting contamination of private wells, notwithstanding repeated warnings, still remain the source of much sickness.

Vaccination in my district has been very thorough. I have used glycerinated lymph exclusively and with the best results.

Since my last report the new High School of Catonsville has been finished and occupied, the average attendance above normal, and with no sickness among the children.

The sanitary conditions of other small towns in my district has been very good.

Appended you will find a tabulated report of births and deaths.

Reports of births in Catonsville and First District of Baltimore County. Total number reported from October 1, 1898, to October 1, 1899, was 180. White (males 83, females 68,) 151; colored (males 14, females 15,) 29; total 180, of which there were stillborn 7 (white). There were 5 twin births reported.

Of these births, 101 were born at Catonsville; 5 were born at Franklinton; 7 were born at Grays; 20 were born at Dickeyville; 5 were born at Thistle; 24 were born at Oella; 4 were born at Mt. Gilboa; 1 was born at Uplands; 1 was born at Johnny Cake; 4 were born at Ellicott City (Baltimore County); 3 were born at Hollfield; 3 were born at Powhatan; 1 was born at Calverton (Baltimore County). Total, 180.

Record of Deaths—Continued.

AGES OF DECEDENTS.	October.	November.	December.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Total.

CHARLES L. MATTFELDT, M.D.,
Health Officer for Catonsville and Vicinity, Md.

CRISFIELD—SOMERSET COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR SIR: It will be impossible for me to send you any report for 1898 and 1899, as no one has given me any material to report. I have called the attention of the physicians in this town to the importance of reporting their obstetric and infectious cases, also births and deaths; but no attention has been paid to any requests.

Yours truly,

J. F. SOMERS, M.D.,
Health Officer for Crisfield, Md.

CUMBERLAND—ALLEGANY COUNTY.

DR. GEORGE L. CARDER—Health Officer. No Report.

FREDERICK—FREDERICK COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR:—The Board of Health of this city as at present organized consists of C. C. Carty, President; W. H. Duvall, and Dr. C. F. Goodell, Secretary.

The record of Frederick City for the past year has been a good one. We have been visited with an epidemic of scarlet fever, covering a range of six months, but the type was mild and no deaths resulted therefrom.

The new law relating to the collection of statistics of births and deaths has been faithfully carried out, and I am satisfied that every death is properly reported and a proper burial permit issued therefor.

The collection of statistics of births is not quite so successful. Where there are a number of physicians in a community there is bound to be one or two who are careless in making returns. As this is a matter of great importance if accurate statistics are to be collected, I would suggest that the law be amended so as to compensate the physician and midwife for each return of birth, to the extent of twenty-five (25) cents (as is done in Massachusetts) and then make it an offense, punishable with a fine, not to make such return within the month. The proper collection of mortality statistics would necessitate the enactment of a law providing for the issuance of a burial permit for every death occurring within the State. An official could be designated to act in such capacity even in the most sparsely settled portions of our State, and that too without cost. If Maryland desires to take rank among the progressive States some action must be taken by the Legislature, such as the enactment of a general burial permit law.

Record of deaths from August 1, 1898 to July 31, 1899:

August 1898.....	Deaths 14	Male 8	Female 6	White 8	Colored 6
September "	" 12	" 5	" 7	" 11	" 1
October "	" 19	" 9	" 10	" 15	" 4

Respectfully, C. F. GOODELL, M.D.,
Health Officer for Frederick City, Md.

FROSTBURG—ALLEGANY COUNTY.

DR. C. C. JACOBS—Health Officer. No report.

HAVRE DE GRACE—HARFORD COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR—The vital statistics of Havre de Grace for 1899 give the following figures:

No. of deaths, 40—male 17, female 23; No. of interments, 48; brought here for burial, 25; removed for burial, 17. Estimated population, 4,000. Death rate, 10 per 1,000. Only one birth was reported.

No. of deaths from diphtheria, 1; measles, 1; pertussis, 1; pulmonary tuberculosis, 3; pneumonia, 5. No. of cases reported—Measles, 8; scarlet fever, 3; mumps, 3; diphtheria, 3; pertussis, 2.

We have enjoyed remarkable immunity from typhoid fever; no cases reported and no deaths. Measles, mumps and whooping cough were the three diseases which assumed epidemic proportions. The table does not show it, but there is reason to believe that all cases were not reported, some not having any medical attendance.

Complaints made about offensive pig-pens and out-houses have been given attention and the cause removed.

The need of a burial-permit section in the Registration Law is very evident; also a section providing for the report of all births.

Deaths are being reported right faithfully, although often not promptly, but the report of only one birth would indicate that something is wrong somewhere.

This report is respectfully submitted.

H. S. WEUSTHOFF, M.D.,
Health Officer for Havre de Grace, Md.

HIGHLANDTOWN—BALTIMORE COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health.*

DEAR DOCTOR—I herewith submit my report as Health Officer for Highlandtown, Canton and vicinity.

There has been less sickness and fewer deaths, according to the increased population, during the last year than in any previous year in the nineteen years of my practice in this locality.

We had no epidemic of any kind during the year. There were a few cases of sporadic diphtheria, which were promptly eradicated. Such nuisances that existed, which were in my power to do so, were promptly checked.

Since January 1, 1899, fifty-seven births were reported.

Seventeen deaths were reported: Pneumonia, 1; tuberculosis, 3; heart disease, 3; typhoid, 1; apoplexy, 1; marasmus, 3; Bright's disease, 1; diphtheria, 3.

One of the most important things to my mind is the need of a burial permit section in the registration law, and it is very essential that we get such a provision into the law at the next Legislature.

A very necessary detail is a fair compensation of the local registrars for recording certificates. A fee of twenty cents for each complete record made is little enough for the counties and small towns of Maryland.

Respectfully,

A. SHELMON WARNER, M.D.,

Health Officer for Highlandtown, Canton and Vicinity.

KENSINGTON—MONTGOMERY COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health, Balto., Md.:*

DEAR SIR—I beg leave to submit the following report, for year ending November 30th, 1899. Number of deaths, 11; number of births, 15.

The sanitary conditions of this town are fair, but I hope before my next report we will have a water system which will much improve our present system.

During the past year we have had no cases of scarlet fever, small-pox, diphtheria or typhoid fever within the limit of our town.

Yours very truly,

WM. L. LEWIS, M.D.,

Health Officer for Kensington, Md.

LAUREL—PRINCE GEORGE'S COUNTY.

Health Officer unknown. No report.

LONACONING—ALLEGANY COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health*:

I have the honor to present herewith the report of the Lonaconing Board of Health.

Whooping cough has prevailed in a mild way during the entire year. Influenza was epidemic in January and February. There have been nineteen cases of typhoid fever, fifteen cases of scarlet fever, six cases of diphtheria—all but one being laryngeal—and two cases of cerebro-spinal meningitis.

As heretofore the law in regard to vaccination has been enforced in regard to children of school age. The subject of vaccination has been called to the attention of the grand juries in this and Garrett counties, and the law has been observed in the country school districts better than in previous years.

All complaints of nuisances have been investigated and abated. A regular monthly report in writing has been made to the City Council, citing these several inspections and all other work done by the Board. At times these written reports have been supplemented by oral reports and suggestions.

Owing to the extreme dry weather, continued through September and October, the water supply of the Lonaconing Water Company became very low, and fair to bad in character. Eight cases of typhoid fever were traceable to its use. Samples of this water and samples of water from several springs and wells in the vicinity of Lonaconing were sent to the State Health Board for analysis. From the report upon these samples and from reports received in former years, much valuable knowledge has been gained. Since the general registration law went into effect seventeen months ago seventy-five deaths and three hundred and twenty-nine births have been recorded. All this has been done without compensation.

Our health ordinance provides that no human body shall be buried without a permit from the town clerk. This and other restrictions connected with the burial and removal of dead bodies has helped to teach the people to be more careful about needless exposure at funerals in case of death from contagious disease. The ordinance was well received, and has rendered valuable assistance to our undertakers and ministers in conducting funerals. A State law, with similar provisions, might well be enacted.

JAMES O. BULLOCK, M.D.,
Health Officer for Lonaconing, Md.

POCOMOKE CITY—WORCESTER COUNTY.

DR. JOHN S. FULTON, *Secretary State Board of Health*:

SIR—In reference to your inquiry concerning the small-pox plague in our city I beg leave to make the following report:

On Saturday, 18th of February, 1899, I was called to see Wood Wilson, colored, who lived on the suburbs of the town of Pocomoke City, Md. I found him broken out with small-pox in the discrete form. This was his home, and he had arrived here the Saturday previous from Norfolk, Va., where he had been at work with about thirty other negroes, all of whom were from this vicinity. I immediately notified the Mayor and City Council of the existence of small-pox in our town, whereupon they at once telegraphed for Dr. John S. Fulton, Secretary of the State Board of Health.

On the same afternoon I was notified that Henry Todd, colored, who had also been at Norfolk, Va., was sick at his home. He resided in the corporate limits of Pocomoke City. I investigated the case at once, and found him broken out with small-pox in the discrete form. This patient lived in the centre of the town.

Later in the same afternoon I was told that Lonie Merrill, a colored boy, was sick at the residence of his mother, within the corporate limits of our town. Investigation proved that he, too, was one of the Norfolk gang, and a visit to him revealed the fact that he was suffering with small-pox in the same form as the other two above mentioned. The Merrills lived on the opposite side of the town from the Wilson family.

Later I learned that the negroes from this section had been at work on the Belt Line Railroad around Norfolk, Va.; that they slept in an old car in which there were several cases of small-pox, and that the negroes above reported had run away, hoping thereby to escape the disease.

Dr. Fulton started for Pocomoke as soon as he received the telegram from the Mayor and Council, and he arrived here at 3 o'clock on Sunday morning. After his arrival, at as early an hour as possible, he visited the patients with me, and agreed fully with my diagnosis. At nine o'clock we had a special meeting of the Mayor and City Council called to discuss with us the best means to stamp out the disease. We decided to vaccinate at once all the inmates of the affected houses and those in the vicinity of the same. We advised every person in town who had not been vaccinated within one year to get vaccinated at once.

We selected a vacant house, about a half mile from the town limits and fully a mile from any residence to be used as a pest house. With a little expenditure in the way of carpenter's work this house could have been made a first-class pest house. We intended to move the patients to it on Monday, but some malicious person or persons burned it Sunday night, so we had to build a new house to use in its stead. The following morning, being Monday, the Mayor had men at work on a shanty near the one burned the night previous, and before sunset it was finished. At an early hour that night the patients

were moved into their new quarters. We selected another house just outside of the town to be used as a detention house, and we moved all the inmates of the infected houses there.

Dr. Fulton sent us Schering's Formaline Disinfectant, together with several cases of Pastils. I disinfected the houses and clothes of all the persons whom I suspected of being in the contagion. We selected James Wilson, the father of Wood Wilson, who had small-pox several years ago, as nurse.

On the second day of March, Rosa Merrill, sister of Lonie Merrill, was taken sick at the detention house. I discovered that she had varioloid. I moved her at once to the pest house.

On the 5th of March, Doricella Merrill was taken with the discrete form of small-pox at the detention house. She was immediately transferred to the pest house.

On the 8th of the same month I was informed that Mary Phillips, a colored girl, who lived about a quarter of a mile from the town limits was taken sick. I investigated her case at once and found that she was suffering with the confluent form of small-pox in the very worst form. The girl was about sixteen years old, was pregnant and unvaccinated. I had her moved at once to the pest house. She died on the 12th of March. I wrapped her in a blanket, placed her in a box, put quick lime over her and buried her near the pest house.

On the 13th, at the request of Dr. John S. Fulton, the County Commissioners, with Dr. C. P. Jones, County Health Officer, met with our local authorities to take further measures to stamp out this dread disease. At the suggestion of Dr. Fulton they decided to have a general vaccination of all those persons in Pocomoke City and the adjacent county for an area of two miles, who had not been vaccinated within two years. They appointed Dr. J. H. King and myself vaccine physicians. They also decided to build a new detention house near the one we were already using. We moved all the suspects in these houses and thoroughly disinfected their homes. From start to finish we had to keep a close watch over the negroes as they were disposed to conceal everything from us. We had guards placed over the detention houses to prevent any ingress or egress.

On the 14th I found Alice Matthews, who lived in a house with John Marshall and several other negroes, broken out with small-pox. I sent her to the pest house, and the rest of the inmates to the detention house, and disinfected their home at once.

On the 15th the one-year-old child of Alice Matthews and the four-year-old son of John Marshall were taken with varioloid at the detention house. They were forthwith moved to the pest house.

On the 16th, Mary Field, another inmate of the detention house, was taken with small-pox in the discrete form. Had her also sent to the pest house. This was the last case.

We had ten cases in all, one of which proved fatal. There were about sixty suspects in the detention house at different times during the epidemic. We kept the suspects in for twenty days. At the end of that time they were thoroughly disinfected and released. In one or more cases the disease broke out in houses where a dozen or more negroes resided and the outlook was really alarming. The patients who suffered from the disease, as soon as they had reached the proper stage of recovery, were thoroughly cleansed, the scales removed, given new clothing from head to foot and released.

The estimated cost incurred in fighting the epidemic was about \$1,200, including everything incident thereto.

Yours very truly,

C. F. HARGIS, M.D.,

Health Officer for Pocomoke City, Md.

REPORT OF THE BACTERIOLOGIST.

DR. JOHN S. FULTON, *Secretary of the State Board of Health.*

DEAR SIR: I hereby respectfully submit my report on the work performed in the Bacteriological Laboratory from January 1st to December 15th, 1899.

Examinations of blood for the typhoid reaction: Positive reactions, 75; negative reactions, 75; total, 150.

Examinations of sputum for tuberculosis: Tubercle bacilli present, 63; tubercle bacilli not present, 57; total, 120.

Examinations for suspected diphtheria: Positive cases, 79; negative cases, 169; total, 248.

Examinations of blood for suspected malaria: Positive cases, 2; negative cases, 26; total, 28.

Examinations of water, 129.

Examinations of vaccine virus, 29; examinations for rabies, 1; examinations of ice, 2; examinations of milk, 1; examinations of filters, 3.

In order to describe the results obtained, comments will be made separately upon each disease.

TYPHOID FEVER.

The method proposed by Westbrook has been used for examining the dried scales of blood sent by physicians to be tested for the typhoid reaction. This consists in adding 1 milligram of dried blood to 100 millograms of distilled water. The blood is allowed to thoroughly dissolve in the water for one hour, and one loopful of a 24-hour fluid bouillon culture is added to one loopful of the dissolved blood on a cover-slip. This is an apparent dilution of 1.200, but is in reality only 1.50, since dried blood loses three-quarters of its original weight as a fluid.

The bouillon is made exactly neutral to phenolphthalein. The cultures are allowed to develop at the ordinary room temperature. The blood is collected by the physicians in aluminum boxes and sent by mail. The doctors are carefully instructed to obtain large enough drops to weigh, as they easily scale off the metal after drying. Very often, however, they secure such small flat drops that the less accurate plan of making a dilution of 1.20 by the eye has to be adopted. I would respectfully suggest, in the next series of circulars, that this point be carefully emphasized.

TUBERCULOSIS.

Although a number of physicians have sent specimens to the laboratory, yet the number of cases examined for the tubercle bacillus is very small when compared to the large number of cases of consumption which annually occur in Maryland.

Physicians are apt to confound early tuberculosis with other less serious conditions, and they often delay any real measure of relief, such as the open-air treatment, until the patient is beyond the reach of everything except the sickle of the grim reaper. Many a useful life could be saved if the physicians would send specimens from all early suspicious cases as a routine measure.

The consensus of medical opinion now upholds the sanatorial treatment as a very useful method, and a number of cures are reported by those who are familiar with its use. These cures can only be accomplished if the case is diagnosticated in its early stage, and the laboratory test usually settles this at once.

In case a negative report is received, the physician should send other specimens as long as his suspicions of tuberculosis remain. The report blanks contains the following directions covering this:

If we report that no tubercle bacilli were found, we may have failed to find them because they were exceedingly few, or because your patient did not cough up anything from a tuberculous area, or because your patient has not tuberculosis. Having found them once, the diagnosis is made; but if they are not found, you should not give up your own well-grounded suspicions until several examinations have failed to reveal the tubercle bacillus.

DIPHTHERIA.

It has already been pointed out that it would be unwise, especially in obvious cases of diphtheria, to defer the use of antitoxin until a positive report has been received from the laboratory. But the test for diphtheria has further uses. It is now known that virulent diphtheria bacilli, capable of producing the disease in others, will often persist in the throat for several weeks after all other manifestations of the disease have disappeared and the patient has apparently recovered. Diphtheria is spread, and many children are infected by convalescent cases in which the diphtheria bacillus still exists unsuspected by physician and friends. A patient should never be permitted to mingle with the public until two successive negative cultures have demonstrated that the throat is free from diphtheria germs. It has also been shown that children who have been housed with diphtheria cases will at times give pure cultures of the diphtheria bacillus from their throats, without showing any symptoms of the disease.

A number of the doctors throughout the State have sent in cultures for diagnosis, and many of the cards contain the

information that antitoxin has already been used. A number of cultures have also been examined from the throats of convalescents in order to determine whether the patient was again ready to mix with the public.

The attention of physicians should also be called to the fact that when we make a negative report for diphtheria, it does not necessarily mean that the bacillus of diphtheria is not present. This point is explained on the notice which we send to the physician, as follows:

Failure to find the diphtheria bacillus may mean:

A. That the culture was not properly made, Please carefully follow the instructions.

B. The growth on the medium was so scanty that it is probable that some antiseptic was used in the throat shortly before the specimen was taken.

C. The culture was badly contaminated. The swab must have touched something else besides the throat.

D. The infection may be in the larynx, and the swab may not have touched the membrane.

If there is any doubt about the case send us other specimens.

MALARIA.

The examination for the malarial organism has only resulted in two positive results out of twenty-eight specimens examined. Some of these cases may have been malaria, and the organism have been destroyed in the blood by the administration of quinine. Then, again, some of the specimens we receive are so badly spread that their examination is rendered impossible. Although it is wise to allow the physicians to use this method of diagnosis, yet it will take some time before most of them are able to properly spread a specimen for microscopic examination.

The directions are as follows:

If the glass squares are not quite clean dip them in alcohol and wipe with a soft, clean handkerchief. Handle very carefully so as not to touch the surface of the glass with your fingers. Clean the lobule of the ear with water and a towel and puncture with a small needle. Wipe off the first drop of blood that appears, then squeeze out rapidly a second small drop. Touch the drop of blood with the centre of one of the glass squares, turn the glass over and lay it on top of another glass square in such a manner that the blood will spread out in a thin layer between the two glasses. The moment the blood ceases spreading slide the glasses apart, lay them both down wet side upwards, and turn the tumbler over them. Fill out your information card and then put your dried slips in the box, return it with the card to the mailing case and forward to us.

It is always better to send several specimens of malarial blood. Use all the slips if you like.

EPIDEMIC CEREBRO-SPINAL MENINGITIS.

The clinical picture of meningitis is, as a rule, easily recognized by physicians, but the epidemic form is not always easily distinguished from the other forms. Typhoid fever sometimes strongly simulates cerebro-spinal meningitis, and the severe diarrheal diseases of children often develop cerebro-spinal symptoms.

The positive diagnosis of epidemic cerebro-spinal meningitis rests upon the discovery in the spinal fluid of the *diplococcus intracellularis*. Puncture of the spinal canal for the withdrawal of this fluid is not, in competent hands, a dangerous procedure. Indeed it is said to be sometimes beneficial. We do not recommend the operation to those physicians who have not previously learned it from a good operator. The diagnosis by spinal puncture after death may, however, be very useful in the management of later cases. In persons over fifteen years old suspected to have cerebro-spinal meningitis, it is well to send, besides the spinal fluid, a specimen of dried blood for the typhoid test.

If it is desired to make a bacteriological diagnosis of epidemic cerebro-spinal meningitis write and ask us for special culture tubes.

Spinal puncture is made with a sterile hypodermic needle. The syringe can be sterilized by filling it with a 5 per cent. solution of carbolic acid, and allowing it to remain in the syringe for five minutes. Then wash out the carbolic acid with several syringefuls of water which has been recently boiled. The skin over the second and third lumbar vertebræ should be sterilized with 5 per cent. carbolic solution, and then thoroughly washed with sterile water. The needle should be at least an inch in length. Make your puncture in the median line between the second and third spinous processes of the lumbar vertebræ. When your needle gives the sensation of being in a free cavity, draw the piston. If the fluid does not follow the piston, move your needle gently in and out, stopping as soon as the fluid appears. When the syringe is full, withdraw the needle, and squirt a portion of its contents over each of four or five culture tubes. Never remove the cotton plug from the culture tube until you are ready to introduce the fluid, and then replace it at once, without laying it down anywhere, and without handling it unnecessarily.

RABIES.

It has been demonstrated that rabies is rather prevalent in Maryland. Not only does it exist among dogs, but the work of Dr. Clement, the State Veterinarian, and of the State Board of Health has shown that dogs often infect by biting such animals as cats, cows, sheep and horses. A number of cases of rabies in

human beings have also occurred in Maryland, and it is often important in order to save a human life that an examination be made of the suspected animals. The presence of the rabic virus in the brain and cord ~~can~~ usually be detected within two weeks, and as the disease does not develop in man for at least a month, this offers time for treatment. All animals showing symptoms of this disease, particularly if they have bitten persons, should be killed and their heads sent packed in ice to the laboratory. If the suspicion of rabies is pretty strong, it is not prudent to postpone treatment until our laboratory results are made known, since we can never determine the matter within ten days, and may be as long as thirty days. The treatment of a bitten person must be begun at least sixteen or eighteen days before the attack of rabies may be expected.

What the Pasteur treatment may be expected to do is indicated in the following, for which we are indebted to Dr. N. G. Keirle, Director of the Pasteur Department, City Hospital, Baltimore:

I. Rabid bites of all grades on face and neck, without treatment would be fatal in about 30 per cent. of cases. Treated by Pasteur's method the fatal cases would be a little over 1 per cent.

II. Severe and multiple bites on face and neck, untreated, would be fatal in from 40 and 90 per cent. of cases. Treated under unfavorable circumstances, 6 per cent. of these cases would result fatally. Unfavorable circumstances are delay in beginning treatment, late or inefficient cauterization of the wounds, alcoholic intemperance, etc.

III. Severe and multiple bites on bare parts of the body and limbs are fatal in about 30 per cent. of instances, untreated.

Treated, the fatality would be less than 1 per cent.

IV. Bites through clothing give a mortality between 6 and 18 per cent., if not treated.

Treated, these bites prove fatal in not more than one-tenth of 1 per cent. of cases.

The services of the biologist to physicians are not meant to be a gratuity to physicians, but should, the State Board of Health believes, lead to mutually helpful relations between the health officials and private practitioners. The biological work is done under the direction of the State Board of Health, and may be stopped at any time in any case. It will be observed that each of the information cards sent out with the mailing cases for physicians' use begins with the question, "Are you up to date, etc." The obvious purpose of this inquiry is to impress upon physicians that some reasonable reciprocity is expected. The order of the State Board of Health on this subject to the biologist is as follows:

BIOLOGICAL LABORATORY ORDER NO. 1.

When a request for biological examination is received from any one who omits to answer the first question on the card, "*Are you up to date with your reports of births, deaths and infectious diseases?*," or if this

question is answered in the negative, the biologist shall at once address the sender of the specimen a communication informing him that the result of the examination may be withheld until the arrears of birth and death certificates are made up, or until a written answer is received stating that the question should have been answered in the affirmative. The biologist shall not, however, delay the examination in such a case, but shall make and report the same to the Secretary of the State Board of Health, who shall dispose of it according to his own discretion.

WM. H. WELCH, M.D., Pres. pro tem.

December 15, 1898.

JOHN S. FULTON, M.D., Sec.

In obedience to this order, it is the practice in this laboratory, whenever a physician sending a specimen fails to answer this first question in the affirmative, to mail him a postal card advising him that his specimen may not be reported upon unless he at once makes up his arrears of returns of births, deaths and infectious diseases. The report in such a case will be inevitably delayed until the matter can be laid before the executive officer of the board. Whether the report will be entirely withheld or not depends upon the greater or less urgency of the investigation from the public health point of view. The personal and private interest of the physician making such a request will receive consideration precisely in proportion to the interest manifested by the doctor in the inquiries of the State Board of Health. Neglect of their reporting duties may therefore result not only in inconvenience, but in actual injury to physicians. For any harm that may result to any citizen from this ruling the State Board of Health is in no sense responsible, since every physician may, with very little trouble, keep himself qualified to call upon the State Board of Health for such services. It is certainly more important to conserve the larger interests of the State, which the laws upon vital statistics and infectious disease are meant to protect, than to serve the private interest of any physician who neglects his wider though less urgent duties.

THE BACTERIOLOGICAL EXAMINATION OF DRINKING WATER.

There are several points in the accompanying table which can be emphasized to advantage. In last year's report an investigation of a typhoid epidemic was made at Lord and Ocean, Alleghany County. The Lord pipe line supplying water to a portion of this town was examined. Only seven colonies and no colon bacilli were found. An examination made this year shows that this supply contains 304 bacteria, but no colon bacilli, and since the water comes from a spring, it can still be considered as safe. The Ocean water derived from a run after it has passed through Lord, receiving the sewage thereof, has become even more dangerously polluted than last year. In November, 1898, the Ocean water contained 1866 bacteria, and the colon bacillus was

found in fifty cases. In September, 1899, it was found to contain 7500 bacteria, and the colon bacillus was found in one cubic centimeter. The citizens of this town should be aroused to the importance of improving their water supply, as water-borne diseases cannot fail to occur among persons drinking such polluted water.

Another interesting investigation was made by the State Board concerning a series of typhoid cases, which occurred on the place of Mr. B.— R.—, at Catonsville.

The following letters will explain the results of the investigation:

DR. JOHN S. FULTON, *Secretadr State Board of Health.*

DEAR SIR: I hereby respectfully report the results of the investigation made by me at the house of Mr. B.— R.—, near Catonsville, on June 5, 1899.

Upon inquiry it was found that two of Mr. R's children, with the governess, had visited Washington about April 8, and had dined at the Shoreham Hotel. On May 8 one of the children developed typhoid fever, and about this time the governess began to feel ill, but did not become bed-ridden for a week or more. This was the beginning of a severe attack of typhoid fever. Ten days after the first case a second child developed the fever, and fifteen days after the first case a third child, who had not been to Washington, developed a typhoid attack.

The house stands on a high hill, and the plumbing showed no leak or apparent flaw. The sewage is taken from the house by a pipe which runs down the sloping lawn for 120 yards, and then bends sharply, and runs for 300 yards, where it ends in open points distributed over the orchard according to the plan of Waring. At the end of the first fifty yards beyond the bend the ground was boggy, and just at the right of this boggy path is the celery bed of a large vegetable garden. All the members of the family ate the celery washed in ordinary water until May last.

About fifty yards below the angle of the sewage pipe (see diagram) the dairy was found. The milk was collected in crocks and cooled in running water from the Catonsville supply, and ice from a pond which is formed from two streams. One of these streams was traced to the kitchen waste from the house of a colored woman living on the other side of the road from Mr. R's place. The privy here had a well-limed box, which is emptied regularly, and no connection between this and the stream was found.

The ice from the local pond was used, it was said, only to cool the milk, and the meats in the refrigerator. The Knickerbocker Ice Company supplied the ice which was put into the

drinking water. The water for drinking was first boiled, and then filtered through a large filter crock with a finely porous bottom.

The privy at the dairy is below the building, on a slight down grade, and contains a well-limed box which is emptied at intervals. Any leakage would run down hill away from the dairy.

The milk is obtained from cows kept on the place, and the cow stable is perfectly clean. The cows are milked in the open air, and the milk is at once put into clean buckets, and taken to the dairy.

The manure pile is often covered with lime, and the excess of fluid seems to gradually soak into the ground at the edge of the woods.

Respectfully submitted,

WM. R. STOKES, *Biologist*.

June 21, 1899.

CATONSVILLE, MD., June 21st, 1899.

MR B. R.

DEAR SIR: I enclose herewith the chemical and biological findings obtained in our inquiries concerning your house epidemic of typhoid fever. As was anticipated, there are probabilities in at least two directions, but the source of infection is not proven. The possibility of infection during your visit to Washington in April, is negatived by the late date (35 days later) of the first case, as well as by the illness a few days later of a child who was not in Washington with your party. Freddie Brune's visit to your house was too near the date of your first illness for him to have been the carrier.

Your milk obtained an excellent chemical report, and shows no suspicious biological content.

The ice harvested on your place is bad, though the biologist was unable to find colon bacillus among its bacteria. Our knowledge of the streams feeding this ice pond would lead us to suspect the presence of colon bacillus. Perhaps it might be found by repeated examinations of large quantities of ice.

Of the four sources supplying the Catonsville Water Company, three contain the colon bacillus, the artesian well alone furnishing a water free from this germ. The water from Patapsco river, that from the dam across the small stream at the Patapsco pumping station, and that from Hause's Dam, all, according to our findings, are capable of conveying typhoid bacillus, and in the raw state are all unfit for drinking water.

It is of course not possible that your family became infected by drinking the boiled water, and if your infection arrived by the Company's pipes, it must have gotten into your filter at

some time, either raw or nearly raw. Your filter propagated bacteria at such rate that one may reasonably believe that once infected with typhoid bacillus it was capable of infecting any quantity of sterile water that might afterward be put into it.

Thus you see suspicions rest unequally upon your home-cut ice and upon the Catonsville water supply. If there occurred last winter any case of typhoid fever on the small watershed supplying your ice pond, it is possible that you may have put away infected ice. The great weight of probability, however, points to the Catonsville water, as certainly dangerous, if not in this instance guilty. The findings of the chemist, and of the biologist, as well as our acquaintance with the streams, are all against the supply as a whole, and against the Patapsco river particularly.

Yours very truly,

JOHN S. FULTON, *Sec'y.*

The following is a copy of the results of the various bacteriological examinations made in connection with the above-mentioned investigation:

Respectfully submitted,

WM. ROYAL STOKES, M.D.,

Bacteriologist to State Board.

REPORT OF THE CHEMIST.

DR. JOHN S. FULTON, *Secretary. State Board of Health.*

MY DEAR SIR: The Chemical Laboratory has reported during the year 1899, up to December 15th, the following analyses: Private water supplies, 126; public water supplies, 62; mineral waters, 12; normal chlorines, 69; total analyses, 269.

The distribution of the work, according to counties and the analyses of the more important supplies of public interest, are shown on the tabulation following this general report. The work of the chemical department has consisted entirely of investigations of the various water supplies. This was necessary on account of the constant demands made on the department from various parts of the State where there was typhoid fever. It is to be regretted, however, that some of the important articles of food could not be investigated, as it has been found in other States that the quality of many food products is improved by such investigations, without a corresponding increase in cost to the consumer.

Respectfully yours,

W. B. D. PENNIMAN, PH.D.,

Analyst State Board of Health.

1. Analysis made in duplicate. Decision reserved awaiting bacteriological examination.

2. Examination made to ascertain if spring could be used as a supply for school. Condemned on account of vegetable contamination.

3. This contamination is of vegetable origin.

4. These analysis were made under Dr. Clark's supervision to determine the best supplies for the hospital.

5. Condemned on sanitary survey.

6. On account of the depth of this well the ordinary standards for judging it do not hold.

7. The analysis given does not comprehend all supplies used in towns and villages by the public or travellers. In many instances when wells are on the street the fact is not noted by the health officers sending the samples.

8. During the year ten (10) duplicate analysis of public supplies were made which, on account of exact correspondence with the previous analyses, are not shown on the above report.

M. L. RULLMAN, *Clerk.*

President's Address.

Maryland Public Health Association, May 11, 1899.

DR. EDWARD M. SCHAEFFER, BALTIMORE.

The record of the past year is one of which our membership may well be proud, and for which the general public, deeply grateful. I take for granted that every one of us is interested in the work which the State Board of Health, through its most efficient Secretary, is inaugurating and accomplishing. Scattered as is our membership throughout every county of this beautiful State of Maryland, each has a duty of co-operation to discharge, assisting local health officers, awakening intelligent public sentiment along sanitary lines, and setting an example of enlightened, conscientious, good citizenship.

Glancing over this Report, you will observe that one county in the State is still unprovided with a board of health or even local officer.

Twelve important towns are enumerated which have no local boards of Health, although most of them have a health officer on whose shoulders rests the responsibility and odium of abating public nuisances, lowering the mortality and sickness rate, and thereby incidentally improving real estate values, attracting new enterprise and capital to a permanent residence; not to speak of the summer boarder, who is no mean desideratum in rural communities. Here you may read of perils by water and perils by milk, due as is justly stated to criminal ignorance and indifference; and it is your own fault if you are not guided accordingly in planning your summer vacations. Typhoid fever, a filth disease and a sanitary disgrace, averages about a thousand innocent victims a year, and yet is one of the most easily prevented diseases.

I take pleasure in quoting, on the other side of the picture, the reference in the Report to one town of less than three thousand inhabitants, which "has its own registration of vital statistics, issues burial permits, enforces the (contagious disease) notification ordinances, practices isolation and disinfection at public cost, makes systematic inspections, uses the newspapers to propagate a knowledge of hygiene, and makes detailed and truthful reports to the State Board of Health." Health, wealth and happiness attend the future of Brunswick, Frederick County!

While extending congratulations and felicitating ourselves and the general public on the movement for the betterment of

the physical, social and moral conditions of the body politic, so conspicuously coming to the front all along the line, permit me to emphasize, without being invidious, the various village-improvement societies that have been organized, the health-protective branches of the United Women of Maryland, and here in Baltimore the record of our new Health Commissioner, the school investigations of the Arundell Club, and the work of the Children's Summer Playground Association.

SMALLPOX—A BLESSING.

Maryland has recently been blessed, from a sanitary standpoint at least, by a threatened invasion of smallpox from her neighboring States.

This danger has happily been averted to the great credit of our health authorities, State and municipal. Honorable mention is certainly due this loathsome disease and its predecessor, the cholera, for valuable services rendered the educative aims and purposes of our Association—so long as neither has applied for active membership therein.

Even the children are picking up sanitary crumbs that fall from their father's table, as this incident illustrates:

Asking a bright, little country lad, this spring, when he expected to accompany his elder brothers to school, I was gratified to hear this up-to-date answer: "As soon as I am seven years old—and *have been vaccinated*." If he had only inserted the qualification, "successfully," he would have been a young Daniel come to judgment.

Dr. Ruhrah, the Quarantine Physician of Baltimore, gives an interesting resume of our local smallpox statistics in the April issue of the Journal of the Alumni Association of the College of Physicians and Surgeons:

"Since the fall of 1881, there have been 1,106 cases of smallpox cared for in the Quarantine Hospital, of which there are fairly complete records as to mortality and vaccination. Of the 645 unvaccinated cases, 48.8 per cent., or almost every other case, died; of the 441 cases which had been vaccinated, 378 recovered, leaving a mortality rate of only 14.3 per cent. This is high, but taking into account the otherwise unusually high mortality, it conferred a great protection. In the 20 cases where the vaccination had been unsuccessful, 14 recovered and 6 died. Almost all of the cases were in adults. Cases in vaccinated children under ten years of age were exceptional. This is a notable fact when one considers that in the pre-vaccination days smallpox was a disease of childhood as much as scarlet fever or measles of to-day."

THE SELF-EXTERMINATING ANIMAL.

Man, however, continues to be the self-extinguishing animal, and very tenaciously guards his questionable distinction. I can-

not imagine a more hopeless task for the last survivor than to be called on to explain to an intelligent and aged bee in what the pleasures and profits of human suicidal and fratricidal intoxication consisted.

EDUCATION THE REMEDY.

The word, Education, practically covers the whole territory.

Education out of selfishness and narrow-mindedness; education in the schools and colleges for the practical duties of citizenship and conscientious parentage; education away from trivialities on the one hand, and a digest of the universe on the other, to the essentials of every-day living in righteous brotherhood. Our children must be educated "to live and let live," and when they grow up and act accordingly, as has already been said here, one of the most important factors of social discontent will have been removed.

In the words of a clear thinker: "Let us have in education, literature and analytical studies, and science with its grand constructions and sanifying discipline—all the useful elements—but let the true goal of education be kept ever in view, which is, not to enable this individual or that to shoot to a pre-eminence over his fellows, but to place the individual in right relations with his fellows; to give to each a career of useful activity, and to prevent that dreary disappointment with life and all its works which overtakes so many in their declining years."

HEALTH MUST BE EARNED.

"The art of living rightly," said the poet Goethe, "is like all arts: it must be learned and practiced with incessant care." Health must be earned—it cannot be purchased directly. As an afterthought in life, its attainment is uncertain, and full of remorse and bitter disappointment. Ignorance excuses no man, community or nation, and Nature's reckoning is, like all her laws, inexorable.

Who planned the curricula in our schools and colleges, and acquired the right to delude many graduates into believing that they were really educated, in any but a literary sense, for the stern, practical, altruistic relationships of life? I presume it was the schoolmen, "sicklied o'er with the pale cast of thought," and leading lives of seclusion, rather than men in touch with the great problems of every-day existence.

Says the scholarly Dr. Andrew Wilson, of England, after quoting the pleas of Combe and Spencer, for a rational respect for the claims of the body in education: "My one grumble in life is that while we are advancing at last in the matter of technical education in so far as trades are concerned, we linger and lag in the matter of health-teaching, that most vital of all

subjects. . . . What are the opportunities for the average man or woman to acquire a training in the laws and practice of health? Is the subject taught in schools? Is it made a compulsory and essential part of ordinary education—this vital knowledge which teaches us how to live long and to live happily? . . . It is better to be healthy than learned when all is said and done."

If any parents who make no protest against this mediæval system of polite learning reckon their offspring among those "unfitted to survive," they will soon find in this age when law, both human and Divine, counts every man "his brother's keeper," in a sanitary sense, that neighbors may decline to take a fatalistic view of their likewise early decease, and proceed to take out a writ of benevolent assimilation as a corrective.

It is high time to awake out of sleep. This promises to be a banner year for all public school interests in Maryland, and especially in Baltimore under the Magna Charta.

Let each earnest friend of true education now resolve to get out a new edition of himself, if need be, and lay in a liberal stock of "mental disinfectants" for use wherever most indicated in his community. I have borrowed this phrase from an amusing and vigorous poem. It is not by Kipling, but quite apropos of our friend, the common enemy:

"Yes, when spring-cleaning comes around
Bring forth the duster and the broom,
But rake your foggy notions down,
And sweep your dusty soul of gloom.
Sweep old ideas out with the dust,
And dress your soul in newer style;
Scrape from your mind its worn-out crust,
And dump it in the rubbish pile.

Clean out your moral cubby-holes,
Sweep out the dirt, scrape off the scum;
'Tis cleaning time for healthy-souls—
Get up and dust. The spring has come!
Clean out the corners of the brain,
Bear down with scrubbing brush and soap,
And dump old Fear into the drain,
And dust a cosy chair for Hope.

Scrub up the windows of the mind,
Clean up and let the spring begin;
Swing open wide the dusty blind,
And let the glorious sunshine in.
Yes, clean your house, and clean your shed,
And clean your barn in every part,
But brush the cobwebs from your head,
And sweep the snowbanks from your heart!"

—S. W. Foss.

FALSE GODS.

The true reformer's lot is not a happy one—he is between two dangers: his own enlightened sincerity and earnestness, the impelling force, and the ignorance, apathy and prejudices of the public at large, a rather disheartening and repelling obstacle. With charity to all and malice to none, let him, however, speak the truth, modestly, tactfully, fearlessly, as he knows, feels, and *lives* it.

Fetish-worship, the belief in amulets, charms, Christian Science, falsely so-called (for, as Rev. Dr. Parkhurst says, "it is neither Christian nor scientific,") patent medicines, horse-chestnuts, rabbits' feet, camphor bags, amber necklaces, etc., all these represent phases of human credulity and self-deception, not to speak of intentional fraud and avarice, which keep people from the temples of the true goddess of health, Hygeia. The gods help those who help themselves—by the intelligent and discriminating use of the every-day, duly appointed means of grace and salvation. Persons who throw themselves down from the pinnacle of seductive sophistry and speculation to test their faith and heal "the mental conceptions of disease in their non-existent bodies," will be very likely to crush what anatomists call bones and vital organs, in such an effective way as to earn premature burial from a prosaic, matter-of-fact world.

And what shall we say of patent medicines and nostrums? The habit of mind which takes on this form of periodical insanity is well nigh universal.

"Hungry is the Anglo-Saxon throat for medicine," as Dr. Wood recently remarked before a medical convention in this city. "Nostrums represent a lottery where few get prizes. . . . The embalment of a lie in printer's ink makes it as indestructible as a dried mummy. . . . The public knows it all, while the doctor learns by hard study that he knows but little. . . . When the sheep wish to be devoured, the wolf can hardly be blamed." Dr. Wood sums up the conclusion of the matter as follows: "So long as there be trout to rise, so long will there be fishermen to make their deadly casts. The credulous, the ignorant, the men and women who want to be deceived, the despairing who grasp at every floating straw, will exist until the coming of the millenium demonstrates that through the succession of the ages the suffering of innumerable human units has perfected human nature; but let us see to it that we in no way aid those who, serving the father of all liars, wax rich and wanton on the miseries of their fellows."

One influence we can exert in favor of clean, respectable and honest journalism. It is nothing less than an insult for any paper that aspires to be read in the family circle to flaunt the portraits of quacks and their simple-minded dupes, along with

the pseudo-medical drivel of pretenders, male and female, living or long since dead, bent on mercenary humbuggery or criminal immorality, in the faces of decent, self-respecting people. Few there be that spare us!

EDUCATED IN WHAT?—AND FOR WHAT?

Before concluding, I would revert to the all powerful lever of education and the waiting opportunity of the schools and colleges. (Some one has wittily retorted that if Vassar introduces Domestic Science for the women, Yale should teach the Art of Husbandry. This is a fair bargain.)

We must see to it that our children are not educated out of their bodies and wits. Their natural needs for healthy, symmetrical growth and development are certainly worthy of as much thoughtful consideration as stock-raisers bestow on the brute creation. Dr. Eastman, of Indianapolis, writes as follows: "It is quite customary for parents to move to towns and cities to educate their children—educate them in what? and for what? and what is education anyhow? If it is to strengthen the mind and weaken the body, to stuff them with knowledge with no wisdom to apply it, I object; if to dicker off health for book knowledge, I protest. If it is to develop the physical as well as the mental, as is suggested by the modern gymnasium in connection with the college, if it is to teach the simpler modes of eating, sleeping and exercise of our ancestors, the art of living according to nature's laws, if it is to fill the mind with such principles as make the coming generation healthier and therefore happier, happier and therefore healthier, to develop brawn as well as brain, I approve. The Universities of Cambridge and Oxford, of Harvard, Yale and Princeton, have graduated many a man who did not even know what to eat or how to eat it."

As Dr. Hartwell affirms in his last report on physical training (1899): "Progress has been materially impeded by the prepossessions and prejudices of the teaching class, which, like the general public, is still largely ruled by ancient and traditional conceptions of mind and body, and has so feeble a comprehension of the new physiology and the new psychology that it is unprepared to acknowledge the just claims of Physical Education."

A notable conference was held in Boston last month, at which President Eliot of Harvard spoke on the meaning and scope of this very theme. "I should like," said he, "to throw out of consideration the whole question of college athletics. They do not seem to me to be a part of what we should practically understand by physical training. They are an enormous exaggeration of anything desirable in the form of physical training. We

mean by physical training the long course of development of the body from the age of four or five to full maturity. We must get rid altogether of the word 'physical' in this connection. The Greeks had a far better conception of the relation of the training of the body to that of the mind.

"We inherit, at least I think in this part of the country, a notion that the body is somehow contemptible—a thing to be despised, over-ruled, trodden under foot, despised generally, and we carry this view of physical training into education. The word 'physical' is an encumbrance to us. Man is a combination of physical, intellectual and moral qualities, and they all go together in education—they must go together. Leaving out exceptional cases, what we know in education is the harmonious, symmetrical development of the whole being, physical, intellectual and moral, taken together. Generally, good physique and good nerves go with a good mind and an available, controlling will. The men who succeed in business, in professions, in occupations which combine mental exercise with physical practice, are greatly superior to the average man physically. I think the present faculty of Harvard College is a remarkably tough set of men. They have the bodily capacity for prolonged, strenuous attention, and there is no better evidence of physical fitness than that.

"And it is this combination of powers that a prolonged course of education aims to develop. It is this we mean and not the development of the muscular system or the body by itself."

Dr. Hartwell at the same meeting urged that physical education (broadly and scientifically interpreted—not taught by pugilists and acrobats as in my boyhood days) lies at the basis of all education, and that consequently schools are nowhere in America properly organized, and will not be until the physical trainer takes his place with the rest of the school faculty.

I close with a summary of the changes and remedies necessary (most applicable to our local conditions) which I take from a teacher's address by Dr. Hartung, of Chicago, December, 1898:

1. "Revision of our present educational system on a more rational and hygienic basis.

2. "More consideration for the physical development of the pupils by means of daily systematic exercise under supervision of special teachers.

3. "Physical education should be placed on an equal footing with the mental.

4. "Every school, especially in our large cities, should be provided with a perfectly equipped gymnasium and playgrounds in the immediate neighborhood.

5. "Regular sanitary inspection of the schools and medical examinations of the pupils from time to time.

6. "Shortening of the periods of study and their proper arrangement with reference to the teaching of physiology and psychology.

7. "Establishment of special summer schools and institutions of recreation for debilitated, anemic and backward children during vacation in healthy locations outside of cities.

8. "Every teacher should be trained and qualified to teach at least such exercises as may be practiced in the schoolrooms.

9. "More male teachers should be employed, especially for boys and the higher grades; also, in their selection as much attention should be paid to their physical fitness as to their mental and moral qualifications.

10. "Home work should be reduced to the lowest possible minimum, and children be advised to spend as much time as possible in the open air.

11. "Teachers should possess a thorough knowledge of the laws of health, hygiene of the schoolroom and the physiology of physical training.

12. "Periods of study should alternate with recesses in the open air and periods of relaxation, or play, while the schoolroom is being ventilated."

While some of these demands may be hard to meet, still they deserve consideration of all thoughtful educators.

REPORT

—OF THE—

Adjutant General

—OF—

MARYLAND.

1898-1899.

BALTIMORE :

WM. J. C. DULANY Co., STATE PRINTERS,

1900.

Letter Transmitting Report of the Adjutant General.

HEADQUARTERS LAND AND NAVAL FORCES OF MARYLAND.

ANNAPOLIS, *December 30, 1899.*

To His Excellency the Governor of Maryland, and to the Honorable the Members of the General Assembly of Maryland,

SIRS:

I have the honor to submit herewith the fiscal reports required by law for the years 1898 and 1899; also report of the expenditures of the "Military Emergency Fund" disbursed by warrants upon the Comptroller of the Treasury, as required by the Act of Assembly of 1898, Chapter 380.

A type-written copy of the fiscal report for 1898 was submitted to the Governor in the beginning of the year, and the reporters of the press were given items for publication. As it was desired that the General Assembly should have information of all matters contained in that report, more particularly the report of expenditures of the "Military Emergency Fund" authorized by the said Act of 1898, it was determined that the printing of the report should be deferred for a year so as to embrace all in the report to the General Assembly.

Only fiscal reports are required of this Department, but there are added a consolidated statement of the claim of the State of Maryland against the United States growing out of the expenditures on account of equipping and preparing our troops for the late war, and a statement of the condition of that claim at the date the report was placed in the hands of the printer, December 20, 1899.

Since that date there has been received from the United States a further payment of \$22,926.39 made on December 27, 1899, leaving the condition of the claim, at this writing, as follows:

Balance of claim as amended and filed December 6, 1899.....	\$52,652 80	
Payment on December 27, 1899, as above stated...		\$22,926 39
Unadjusted Clothing Account, arising out of differences in valuations made by the State and the U. S. Quartermaster General's Department		20,874 51
Total of various items running through entire account, causes of non-payment not yet stated by Auditor.....		8,851 90
	\$52,652 80	\$52,652 80

It is hoped outstanding differences may be adjusted before the close of the current State administration.

There are also submitted copies of the Proclamations of the Governor and of the principal General Orders issued in connection with the late war, a roster of the officers, with the number of men, who served the United States from Maryland in said war, a roster containing the names of the Governor and Commander-in-Chief, the General Staff of the Militia and the aids to the Commander-in-Chief, and the names of the officers, with the number of men, now constituting the Maryland National Guard and the "Veteran Corps," Fifth Regiment Infantry, Maryland National Guard.

This information is followed by reports of the operations of the Quartermaster General's Department and the Inspector General's Department, and by reports of the Commanding Officers of the First Brigade, the First Naval Battalion and the "Veteran Corps."

These additions to the fiscal reports are full and complete, and your attention is respectfully called to them as giving valuable information, especially in regard to Maryland's work in preparing for the late war and to some of the conditions which followed.

In the preparation of the fiscal reports care has been taken, not merely to state a debit and credit account, but to explain the purposes for which the several disbursements were made. The Adjutant General's accounts have been compared with the books of the Comptroller's office, and there is exact agreement so far as warrants issued have been presented to that office.

The claim of the State against the United States was prepared chiefly by John C. Marshall, Clerk to the Acting Quartermaster General, whose services in the Quartermaster General's Department have been invaluable to the State in this and in other work of the Department, notably in the preparation of the property statement appended to the Acting Quartermaster General's report. It would be well if the services of Mr. Marshall, who is a retired army man, could be secured for the State in future work in the Quartermaster General's Department and in other Departments. Some conception of the magnitude of the work in preparing the State's claim against the Government may be had from the statement that over twelve hundred papers, besides letters of information and of inquiry, have been filed with the Auditor for the War Department.

The State is indebted to Senator McComas for his interest in urging the speedy adjustment and settlement of this claim, and action has been accelerated by visits of the Governor to Washington. In this, as in other matters in which he has directed and assisted officers charged with the collection and disbursement of public funds, the Governor has endeavored to protect the financial interests of the State.

This claim against the United States was presented and has been actively followed up by the Adjutant General, although this is not among his prescribed duties. Some of the States have not only employed agents or attorneys, but have had a number of clerks aiding the Auditor's Department in Washington.

While the money (\$101,080.04) thus far collected has been paid into the Treasury of the State without any discount or abatement whatsoever, the work of the Adjutant General in prosecuting the claim was with the understanding, as he supposed, that he should proceed in consideration of the increased pay to be received by him, under the assignment and order of the Governor hereinafter referred to, during his tour of special duty which ended on November 21, 1898. Although the increased pay was withheld on and after September 1, 1898, the Adjutant General has, nevertheless, been performing the work he undertook.

In an interview with the outgoing Attorney General and the Comptroller about this increased pay, in which the work of the Adjutant General during his tour of duty as commanding officer was fully explained, the Attorney General said that, while he did not feel at liberty to reverse the opinion of his predecessor who had sustained the position taken by the Comptroller in withholding this pay, he thought the Legislature should, and he believed it would, award compensation for the work of prosecuting the State's claim against the Government of the United States, and thus adjust the claim of the Adjutant General for increased pay fairly and equitably. I shall not discuss the question at this time further than to say that the Comptroller stated that, although constrained to pursue the course he did pursue upon his and the former Attorney General's interpretation of the meaning of the law, he thought the claim for increased pay was "equitable." The Governor admitted it was "just and fair." I shall later beg leave to call the attention of the General Assembly to this matter, with a particular account of all things relating thereto, as it is a matter which, while somewhat personal to myself, concerns the public as well. I have not desired, and do not desire, anything to which I am not legally and justly entitled, according to my conception of law and right, and I shall be content to rest the determination of the matter with the representatives of the people.

The statement appended to the Acting Quartermaster General's report, above referred to, is one of the most valuable contributions of its kind ever published in Maryland, and, as stated in that report, much time was consumed in collecting the information from which this statement is compiled.

The expenditures for re-equipping the Maryland National Guard have been heavy this year. As some off-set to this we have, as will be noted in the fiscal report, an unusually large sum to our credit out of the apportionment of the appropriation to Maryland by the United States Government for the benefit

of our militia. This sum should be sufficient to meet all demands during the coming year for tentage, ordnance and such other material as is usually furnished by the Government.

It was originally proposed that this Department should not go further in submitting the reports herewith, especially as the reports of officers give such information as will be of interest. Nevertheless, as it has been suggested that a more particular account should be given of the operations of this Department during the late war, and of matters relating thereto, the more so in that upon the head of the Department, not only as Adjutant General, but as Commanding Officer and representative of the Governor, devolved responsibilities of a delicate and trying nature, I shall proceed. I shall endeavor not to repeat what has been treated of in reports of officers herewith, and shall, not merely of necessity, but for the good of the service, omit many details and incidents, seeking to avoid criticism and comment as far as may be, and making this communication as brief and impersonal as it is possible to make it.

It may be well to state in the beginning, in view of some misconceptions that have prevailed, that the object in incorporating into the Act of 1896, Chapter 89, known as the "Militia Law," the provision authorizing the governor to "assign, delegate and order" the Adjutant General, to assume command of troops in the case of riot, as set forth in the Act, and "in all other cases of internal disturbance, war and invasion," was to avoid the complications and injustices which occurred in the riots of 1894, when not only did my distinguished predecessor hold, according to the opinion of the learned Attorney-General at that time, a very doubtful authority, to say the least, in the military "Department of Maryland," but, while bearing the burdens and responsibilities of Commanding Officer, he received, very much against his protest, the pay of one of his First Lieutenants. It may be added that neither the General Assembly which passed the bill nor any officer who proposed the provision above referred to, so far as has been ascertained, could have foreseen the war with Spain in 1898, two years later.

Towards the close of the session of 1898, when rumors of war prevailed, a member of the House of Delegates offered a bill to appropriate \$200,000.00 in the event of war. This was not encouraged at the time, but later, when other States were making large appropriations, a bill was prepared by me which, at the Governor's request, was delivered to him, and after some emendation it was offered in the Senate by the President of that body, referred to the proper committee and passed with great unanimity after an amendment had been added in committee, as I have been informed, authorizing the members of the Board of Public Works to borrow money if necessary. I was not asked to appear before the committee nor was I present in either branch of the Legislature at any time when the bill was under

consideration. The Act clearly states the purposes for which the money appropriated should be used, and clearly defines the duties of the Adjutant General in issuing warrants and accounting for its disbursement, the only duties imposed upon this officer by the Act.

On April 16, 1898, the Adjutant General of Maryland, in accordance with a request contained in a letter to the Governor from Mr. Hull, Chairman of the Military Affairs Committee of the House of Representatives, appeared before said committee in Washington with military representatives from a number of other States in the Union. The object of this meeting seemed to be to ascertain the views of these State representatives, as well as the views of certain army officers present, as to the advisability of passing what was known as the "Hull Bill" for the increase and practical reorganization of the army upon such a scale as would insure a sufficient number of officers and men to meet, in the first instance, any requirement in the event of war. Incidentally, or it may be primarily in the minds of some, the object was to show that there was no immediate necessity for the proposed increase, but that the so-called National Guard organizations of the several States were sufficient and adequate to co-operate successfully with the army. This latter view was supported earnestly and sincerely by many of those present. Maryland's representative, speaking for himself, without any previous instruction, and for what he believed to be the position of Maryland, warmly advocated the "Hull Bill" which, had it been enacted into law at that time, would have avoided the alleged necessity of calling upon the National Guard. While claiming for the Maryland National Guard as much patriotism, loyalty, devotion to duty and efficiency as that of any other State, I did not think its training and experience had been such as to fit it for service in a war which might require invasion of a foreign country. Moreover, I did not think it fair that officers and men who had been mustered in in the State service with no other purpose than to serve their State in ordinary emergencies should be placed in the dilemma of having to sacrifice their business and other interests at a moment's notice or be branded as unpatriotic or cowardly.

The committee adjourned to meet at the office of the Secretary of War in the afternoon with the State representatives and the Army Officers who were present at the earlier meeting. At the latter meeting it was officially declared that war was certain, and it was determined that practically the entire National Guard of the country should be called out and that the committee should forthwith prepare a bill containing provisions giving the President authority to so call out the National Guard upon the declaration of war. Such a bill was subsequently passed with a supplemental bill passed later.

It is important to bear in mind these preliminary matters as an

explanation of the meaning of the provisions of the Act of Congress for calling out the National Guard, of the subsequent course of events in the preparations by the States for war and the volunteering of the National Guard, and of the peculiar status of these organizations while in the United States service.

It is proper also to add that there was apprehension, at that time, of actual invasion of our waters by the Spanish fleet.

So much having been determined at Washington in relation to the National Guard, against such protest as was made and implied by the position taken by the Adjutant General of Maryland, the afternoon and night of that Saturday were spent in a careful consideration of these new and unusual conditions, and General Orders Nos. 6, 7 and 8 were prepared. There was question whether or not a "retired list" could be created. Although the Board of Officers who prepared the Militia Law of 1896 agreed that the authority proposed to be vested in the Governor by Section 3 "to make and publish all needful rules and regulations" would be ample for this purpose, when officers of both the Fourth and Fifth Regiments as early as the summer of 1896 asked that a regulation creating a retired list should be made and published, the Adjutant-General, after a more careful study of the law, refused to make the regulation on the ground of its doubtful legality. But the present being a case of "threatened invasion" and "certain war," Section 2 which authorizes the Governor "to make all needful rules and regulations therefor" was deemed to apply. There was ample authority in Section 23 to revoke commissions, for "qualification" applies to physical as well as to mental incapacity. The method prescribed in the latter section is not only cumbersome but somewhat harsh, and it was thought every officer would gladly accept this method of "retirement," which, as a matter of fact, was generally accepted at the time General Orders No. 6 went into effect.

The information gained at Washington on April 16, as hereinbefore set forth, with copies of General Orders Nos. 6, 7 and 8, was laid before a number of officers called together at the house of Brigadier-General Lawrason Riggs in Baltimore, on Sunday, April 17, 1898. The officers present were General Riggs, General Thomas S. Mumford, Major Clinton L. Riggs, Captain C. Baker Clotworthy, Captain Charles D. Gaither and Lieutenant J. Markham Marshall. It was proposed to have at least two officers of the Fourth Regiment, but there attendance could not be secured at the time of the conference.

There was no expression of objection at this conference to the provisions of these General Orders nor to anything that had then been done or that was then proposed. It was understood and agreed that as the Maryland National Guard was to be called upon Maryland would do her duty, and that every preparation should be made in advance, as far as practicable, for the situation that confronted us. There was no enthusiasm. It was a matter of duty and of State pride, for the most part.

General Orders Nos. 6, 7 and 8 were therefore promulgated on April 18.

During this week, besides the activity in the First Brigade, the First Naval Battalion received special orders to prepare for war upon inquiries and requests from the Navy Department. It may be stated in this place that the whole course of conduct of the officers and seamen of this battalion during the continuance of their service in the war and on their return to the service of the State was such as to gain for them the approbation of the United States and the State authorities. It may also be stated that the "Extract from Log of First Prize Crew from U. S. 'Dixie'" and other appendices to Commander Emerson's report on file at these Headquarters are of great interest, but it was impracticable to print them with the report.

On April 21, war being declared, the Governor placed the Adjutant General in command of the Maryland State forces by a duly authenticated commission. A copy of this special commission was filed at the War Department, and it was recognized there during the period it was in force. The authority so vested in the Adjutant General was fully approved by the War Department as simplifying the relations between that Department and this, for the commission not only placed the Adjutant General in command, but gave him "full power and authority to do and to act in all respects as the Governor and Commander-in-Chief could or might do in the premises," thus making him the Governor's representative as the law prescribed.

The officers at Brigade Headquarters in Baltimore requested that the troops should be ordered into camp to facilitate the equipping and organizing for the war. Orders were accordingly issued on April 22.

On April 23, upon the request of the Secretary of the Navy, the first contingent of the Naval Battalion was ordered to Norfolk, and subsequently another contingent was called for and ordered to Norfolk to complete the complement of the "Dixie." The celerity of the movements of the Naval Battalion in thus reporting for active duty, as more fully set forth in Commander Emerson's report herewith, was among the creditable achievements of this well-disciplined State organization.

On Monday, April 25, 1898, the entire First Brigade reported for duty at Pimlico, in accordance with orders previously issued, under the immediate command of Brigadier General Lawrason Riggs. The promptness of the movements in this case also deserves high commendation. (See General Riggs' report). Most of the events at the Pimlico Camp are stated by General Riggs in his report and explained by the orders issued during the encampment. Not only was delay caused by the weather, as shown by General Riggs' report, but by the frequent changes in numbers required and in the method and manner of organizing prescribed from time to time by the War Department. Nine changes were made after the call for troops.

In addition to these causes of delay preparations were hampered by the very natural efforts of relatives and friends who did not desire those they loved and upon whom, in many cases, they were dependent, to volunteer for this doubtful experiment. A sort of public sentiment was thus created which found expression in letters and other matter published in the newspapers. This sentiment had so far prevailed that assertions were made "on the outside" that when the day came for muster in one entire regiment would refuse to volunteer. Of course these assertions were made by those who did not know the regiment. In order to relieve somewhat this phase of our difficulties and to more clearly set forth the restrictions imposed by the State upon volunteering, a letter was written General Riggs to the following effect: "No officer or man of either the Fifth or the First Regiment who has father or mother, wife or sister, or any other relative dependent upon him for support, will be permitted to remain in his regiment or to be mustered in into the United States service."

On April 26 a telegram was received from the Secretary of War calling for Maryland's quota as one regiment of infantry and four heavy batteries and prescribing the number of officers and men in each organization. A telegram was immediately sent stating we had no artillery in Maryland and asking for a change in this call. A letter was also immediately written to the Secretary of War protesting against this call and offering the entire First Brigade as then constituted, stating further, in effect, that if efficiency and fighting were desired Maryland could better answer these requirements by furnishing the entire Brigade, and asking that we be credited with the excess thus furnished upon a second call for troops. No notice was ever taken of this letter, but on April 27 was received the official letter from the Secretary of War repeating the call as above stated, and asking that the quota be made up "preferably from the National Guard organizations." This was in accordance with the determination made on April 16, above referred to, and the act passed in accordance therewith.

Immediately after receiving this letter from the Secretary of War the Governor issued his proclamation, and orders were issued accordingly, as will appear from copies thereof herewith printed. The call for the four batteries of artillery was changed to a call for two battalions of infantry, and other changes were made as above stated.

The question as to how these National Guard organizations should be mustered in arose at the War Department, and upon suggestion it was agreed that they should be mustered in and the officers commissioned as of the "5th and 1st, (respectively), Maryland U. S. Volunteers, [5th and 1st, (respectively), Regt's, I., M. N. G.]," the designation "U. S. Volunteers" being subsequently changed to "U. S. Volunteer Infantry."

This parenthetical designation was designed to mark the distinction between National Guard regiments and other regiments in the Volunteer Army of the United States and thus to preserve the integrity of our State organizations.

On May 13, 1898, provisional and special commissions were issued by the Governor of Maryland, as required by the United States, to the officers of the Fifth and First Regiments. The Fifth Regiment was mustered in into the United States service by Lieutenant Ellwood W. Evans, 8th U. S. Cavalry, on May 14, 1898, with 985 officers and men, and the two battalions of the First Regiment were mustered in by him on May 17, 1898, with 651 officers and men. The Fifth soon after departed for Chickamauga, and the First for Fort Monroe.

Provision had been made by the United States that each National Guard regiment might have one Army Officer as a Field Officer. This was a wise provision. Captain Walter L. Finley, 9th U. S. Cavalry, who had been in Maryland by assignment of the War Department for several years, whose ability as an officer was well known, and whose high standing in this Department as a man of integrity, courage and honor was understood and approved by officers and men of the Maryland National Guard, was recommended for the position of Major in the First Regiment, and Lieutenant Ellwood W. Evans, the mustering officer above mentioned, who had been military instructor at St. John's College for several years and who was also most favorably and popularly known among Maryland officers and men as a competent officer and a gentleman above reproach, was selected for the Fifth Regiment. It was subsequently made known that the Fifth preferred to enter the United States service with its own officers alone. After information was received from the War Department that the First Regiment would be assigned to garrison duty, for a time at least, and that Captain Finley's regiment, the 9th Cavalry, was ordered to the front, Captain Finley held it to be his duty to join his regiment and resume the command of his own Troop. As Lieutenant Evans' regiment was not assigned for duty at the front he consented to go with the First Regiment as a more certain means of seeing active service in the end, and the officers of that regiment readily accepted him as one of their majors. His services to this regiment were invaluable.

The announced purpose to permit these regiments to select and retain, as far as practicable, such of their own officers as were not rejected by the examining surgeons was consistently followed in commissioning officers at Pimlico. No other course would have been just to those who were making the sacrifices many of them made, and any other course would have been in violation of the rights of these organizations as National Guard organizations.

The Staff appointments were, in every case, made by the

Commanding Officers of the respective regiments, and commissions were issued accordingly.

In the subsequent commissioning of officers of the Fifth Regiment, of which there were only five, to fill vacancies, commissions were issued on the recommendation of the Commanding Officer. In the subsequent reorganization of the First Regiment, after the second call for troops, the Adjutant General and Major General Commanding did suggest the names of several officers at the request and with the approval of the Commanding Officer of the regiment; a privilege accorded, as was believed, not merely by virtue of his office but as the former regimental commander. At no time and in no case, except in that of Lieutenant Evans above mentioned, was any man, not a member of the organization, commissioned, although the "pressure" to induce departure from this rule almost amounted to persecution in some instances. There was, as was to have been expected, much disappointment at the failure of some to enter the service, but no influences or motives other than consideration for the welfare of these organizations and the good of the service operated upon this Department either in this or in any other matter.

On the second call for troops and the proclamation of the Governor thereupon on June 8, 1898, orders were issued and steps were taken for the organization of the Battalion of the Fourth Regiment which promptly responded to the call to become, for the time, a part of the First Regiment. When the loyalty of officers and men to their own organization is considered, loyalty even to their company designation, too much praise cannot be given the officers and men of the Fourth for being willing to thus leave their own regiment and assume another company designation. This Battalion was mustered in by Captain William J. Nicholson, 7th United States Cavalry, at Baltimore, on June 29, 1898, and soon thereafter left for Fort Monroe to join the First.

On this second call for troops officers from each of the Fifth and First Regiments were sent back to Maryland with orders to report to these Headquarters for blanks and instructions and to proceed with the work of recruiting so that the strength of each company should be increased to one hundred and six enlisted men. The completion of this recruitment made each of said regiments, after the addition to the First Regiment of the battalion of the Fourth above mentioned, a three-battalion, twelve-company regiment, with an aggregate in each of thirteen hundred and thirty-three officers and men; thus making, as stated in the roster herewith, a total of twenty-six hundred and sixty-six infantry, besides the four hundred and fifty-six from the First Naval Battalion for the naval service—a grand total of thirty-one hundred and twenty-two. There was also a number of enlistments from Maryland in a so-called "immune" regiment, with which the State authorities had nothing to do.

By virtue of the special commission to the Adjutant General from the Governor authority was given me by the War Department to visit, from time to time as might be deemed expedient, the First Regiment upon matters relating to its discipline, further organization, etc. In pursuance of this authority three visits were paid the regiment at Fort Monroe and two at Camp Meade, the last visit to Camp Meade being in November, 1898, shortly before its departure for its winter quarters in Augusta, Georgia. The second visit to Fort Monroe was to complete the organization of the regiment. This was practically accomplished on July 7, 1898, although one officer was not mustered in until July 15.

After the departure of our troops for the war it was urged in certain quarters, from good motives for the most part, that another regiment should be organized for the protection of the State, as the Legislature had appropriated an abundance of money for the purpose. The position taken at these Headquarters in reference to this matter was that Troop "A," after the increase in its authorized strength to one hundred enlisted men, the remnant of the Fourth Regiment, the First Separate Company and the "Veteran Corps" would be sufficient for ordinary purposes, especially as our proximity to Washington, where there was then a number of troops, would afford us opportunity to secure aid in case of serious riot or internal disturbance. In fact, Troop "A" was practically "on waiting orders." It was further held that the expenditure of about thirty thousand dollars, which would have been required to fully equip the proposed regiment, would not be justified under all the circumstances and with a due regard to the welfare of the State. Some of the States did organize new regiments.

Early in August, upon the receipt of a letter from the Commanding Officer of the Fifth Regiment, then at Tampa, urging that the regiment be sent to Puerto Rico as its last opportunity to see active service, I proceeded to Washington. The result of several visits and numerous telegrams was that, while the regiment was about to be assigned to General Schwann's Brigade of Regulars, it was finally brigaded with the 2d Georgia and the 1st Florida, under General Hudson, for service in Puerto Rico. At the same time the 1st Regiment was added to General Wade's Provisional Division for service in Puerto Rico, thus assigning all of Maryland's troops for active service as a recognition, as was stated at the War Department, of Maryland's efficient efforts to furnish well-equipped troops for the war. General Miles' telegram that no more troops were needed in Puerto Rico prevented these contemplated movements.

On Thursday, August 11, 1898, the Governor called my attention by telephone to an account in one of the daily papers in Baltimore of serious illness and dissatisfaction in the 5th Regiment at Tampa. He further called attention

to letters received by him from persons in Baltimore. Not one word of complaint from any officer or man had reached these Headquarters, except the very natural request of the Commanding Officer, above referred to, that the regiment should be assigned to duty in Puerto Rico. It was known that the regiment was one of only eight of the large number at Chickamauga which was deemed fit in material and equipment for immediate service. The State had even furnished our troops with ammunition. It was known the regiment was under orders for Santiago in the very beginning and that embarking had, at one time, been commenced at Port Tampa. It was supposed that matters were not altogether comfortable at Tampa, but no official notification of actual conditions there had been received.

However, after further talk with the Governor it was determined that a visit should be paid to Tampa. Having obtained from the Adjutant-General of the army, by virtue of the special commission from the Governor filed at the War Department as aforesaid, a strong letter to the Commanding Officer of the Fourth Army Corps, which, among other things, stated the purpose of the trip to be "to inquire into the health and general condition of the 5th Maryland U. S. Volunteer Infantry, based upon rumors which the bearer believed to be largely sensational," departure was made from Baltimore on Saturday afternoon, August 13, 1898. Tampa was reached on Sunday night.

That neither officers nor men of the regiment, used for weeks to their own appearance and surroundings, worn with waiting, wasted, in many cases, by fever and disease developing and multiplying day by day, could understand how the situation affected one who had been one of them, and who had seen them depart from Pimlico three months before in health and vigor, is not a matter of surprise. Had I been vested with the authority I should, then and there, have ordered the regiment home.

Orders had been issued to remove the regiment, with other troops at Tampa, to Huntsville, Alabama; but a rumor prevailed that it might be ordered to Fernandina, still within the "fever belt." I therefore left Tampa for Jacksonville on Tuesday night, August 16, having heard much of censorship at Tampa, and on the morning following wired the Adjutant General of the Army from the latter place as follows: "To my surprise nothing sensational in those rumors. The patient and uncomplaining endurance of officers and men amounts to heroism. I earnestly hope the exodus from Tampa to Huntsville will be speedily accomplished."

On my arrival at Huntsville, by way of Chickamauga where valuable information as to army conditions generally was obtained, General Coppinger, Commanding the Fourth Army Corps, and his officers extended every facility for the work in hand, gave full information, offered the choice of camping ground for the Fifth, and agreed fully, with the entire

concurrence of the Chief Surgeon of the Corps, that it would be advisable, under all the circumstances, to remove not only such of the soldiers of the regiment as were already ill and able to be moved, but more particularly those who were in that depressed state bordering on illness. Arrangements were therefore made soon after the arrival of the regiment at Huntsville on the Sunday morning following for hospital trains, and two trains transporting nearly two hundred of these invalids were dispatched in the ensuing ten days.

General Riggs received these invalids on arrival of the trains in Baltimore, and the worst cases were removed to hospitals by special direction of the Governor. The Surgeon General of the Army afterwards paid about \$4,000 on account of the hospital claims, relieving to this extent the obligation assumed by the State.

Shortly after the arrival of the regiment at Huntsville the Governor of Maryland, at the solicitation of friends of the regiment in Baltimore and in accordance with the wishes of a very large majority of the members of the regiment, wired that he had secured from the War Department an order for the mustering out of the Fifth Regiment. The regiment remained at Huntsville over two weeks, reported at Baltimore early in September and was mustered out on October 22, 1898.

About twenty members of the Fifth Regiment died from disease contracted in the service, including that very popular and well-beloved officer, Lieutenant-Colonel William D. Robinson.

The war career of the First Regiment was uneventful. This regiment, like the Fifth, did what was required of it. It performed garrison duty at Fort Monroe; left for Camp Meade, near Harrisburg, Pennsylvania, in September; left Camp Meade for winter quarters at Augusta, Georgia, in the late fall, and was there mustered out on February 28, 1899. Eight men were reported to have died in the First Regiment.

That neither regiment saw more active duty was not, I am persuaded, the fault of either organization. As a prominent army officer said: "There was not enough war to go around." Whatever may have been the shortcomings of any department of the government, very few persons have any conception of the "pressure" brought to bear by Senators, Representatives and others in high places to accomplish special purposes. It is but just, however, to these "servants of the people" to say that the "pressure" upon them frequently comes from the people they represent. It has been alleged that this "pressure" was largely the cause of the assignment to duty of certain regiments in the late war. However this may be, the particular matters that should not be lost sight of are the prompt response to the call of duty by Maryland troops, the sacrifices made by these loyal officers and men, the unreserved offer of themselves to their country for whatever the fate of war might bring.

But, while this is all true, it can hardly be expected that the National Guard will ever again be called upon under similar conditions. Its present organization, its real relations with the United States Government; our so-called camps of instruction, where tents are pitched, sinks dug, food cooked and served for the men; the methods of discipline, the retaining, from sentimental motives, which would in some cases be praise-worthy if the consequences were not likely to be serious, of officers and men who have grown old in the service of the State and their country, or who have become physically disqualified for active duty in the field—these and other considerations, including the fact referred to in the early part of this communication that officers and men of the so-called National Guard, as now constituted, are simply mustered in to serve the State, render the calling out of the National Guard for a foreign war impracticable and unfair. This was the position taken by Maryland, through its proper representative, at the beginning, as hereinbefore set forth, and events justified the apprehension then entertained.

One difficulty about Volunteer Regiments when first called into service is that neither officers nor men, as a rule, have learned to take care of themselves. The least and last thing a soldier has to do is to fight. Any man with ordinary intelligence can learn drill and some tactics, and any ordinary man will fight upon provocation, especially if he have company. The primary duty of an officer is himself to learn and to teach his men how to care for their bodies and their morals in camp, so that when the fighting time comes they may be in that state of physical health and moral vigor which steadies the nerves and otherwise makes a man feel like a man. If any intelligent man of business who takes up military studies and drill for a few hours a week, with a view of qualifying himself to be an officer, is as fit to command and have charge of men as an army officer, or, if an enlisted man in the National Guard is "as good as a regular," then the government would as well close West Point and disband the regular army.

After the return of one of the regiments there was much agitation of questions growing out of the peculiar conditions and the results attending this calling out of the National Guard for the service of the United States. Letters were written and published in the newspapers, and opinions were freely given. This agitation proceeded mainly, it is fair to assume, from ignorance of the provisions of the Acts of Congress referred to in the early part of this communication, and, in some cases, from want of knowledge of our own laws and military regulations. Circular No. 3, promulgated on October 10, 1898, while provoking some adverse criticism based upon an entire misapprehension of its purposes, practically set this agitation at rest. This circular, while containing quotations from the United States law, the constitution

and laws of this State and military regulations, was, for the most part, in the nature of an opinion as to the status during and after service in the Volunteer Army of the United States of those who were National Guardsmen at the time of muster in, and as to the status after muster out of those who were not National Guardsmen. The position taken on two points at least was afterwards affirmed by opinions rendered by competent authority elsewhere. The Solicitor-General of the United States, in an opinion approved by the Attorney-General of the United States, decided that General Harries, the Brigade Commander of the District of Columbia National Guard, did not forfeit his commission as Brigadier-General or his right to issue orders to the National Guard of the District as such Brigadier-General in consequence of being commissioned by the President as Colonel of the regiment which entered the United States service even while still holding this provisional commission. In New York it was thereafter held that an officer in one of the National Guard regiments which volunteered for the Volunteer Army of the United States might be court-martialed by State authority after muster out for offenses committed while in the service of the United States, and that a State Court of Inquiry could investigate the entire course of conduct of the commanding officer and other officers of a National Guard regiment while in the United States service.

No charges were preferred against any officer or man of the Maryland National Guard after muster out of the United States service in the late war.

After other matters had been disposed of in the fall of 1898 a plan, before that long considered, was sought to be put in operation by which, it was believed, the State organizations could be very nearly assimilated to organizations in the regular military establishment of the country; but there was such violent opposition to this, it was adjudged to be so out of the course of anything that ever had been done before in Maryland, there seemed to be so pronounced a sentiment in certain quarters that each organization should remain, in some sort, a law unto itself, that the plan was abandoned after the publication of one regulation.

Still, pride in the organization on the part of its members is to be commended. It has influenced our organizations in the past to do the State good service, and it will in the future. That these organizations have survived the processes of the disintegration which was threatening them during and after the trying ordeal through which they recently passed, is not due so much to the orders preserving their integrity and unity as to this very pride of organization and loyalty to the State service which have stimulated the work of officers and men.

I cannot too strongly commend the valuable services of General Riggs, the Brigade Commander, of General Mumford, the

Inspector General and Acting Quartermaster General, and of Commander Emerson, Commanding the First Naval Battalion, for their faithful and efficient work during the late war and throughout the whole of this State administration.

I must express my appreciation for the invariable courtesy and consideration shown me by the officers of the War Department and all other Army officers with whom I was brought in contact during my limited tour of special duty.

In conclusion, I beg leave to submit the two following recommendations as to amendments of the Militia Law:

(1.) In order that officers who have long and faithfully served the State may retain their rank and their uniforms without being required to perform active duty, except in certain emergencies and within the limit of their ability, and that all doubt as to the retiring of officers shall be removed, I respectfully recommend that amendment to the law be made providing for the retirement of such officers upon their application.

(2.) As there is present provision in the Militia Law by which enlisted men may be honorably discharged upon application and dishonorably discharged after court-martial, I respectfully recommend that further provision be made for the discharge of enlisted men "for the good of the service."

As I am about to resign the office of Adjutant General to accept an office conferred upon me by the suffrages of the people of my county, I desire to thank the present Governor for the confidence implied in his original appointment of me as Adjutant General, and in his subsequent special commission to me as Commanding Officer and his representative during the late war.

And being thus about to sever relation with the military establishment of the State, which commenced in eighteen hundred and seventy-seven, I beg leave, through this communication, to express my steadfast regard and lasting good will for the officers and men of the Maryland National Guard, earnestly hoping that they may remain loyal to their State and to their organization, and that they may always endeavor to maintain a high standard of discipline and efficiency.

Very respectfully,

L. ALLISON WILMER,
Adjutant General.

FISCAL REPORT.

FISCAL REPORT
OF THE
Adjutant General of Maryland.
1898.

ACCOUNT SHOWING THE DISPOSITION OF THE APPORTION-
MENT TO THE STATE OF MARYLAND OF THE APPRO-
PRIATION MADE BY THE UNITED STATES GOV-
ERNMENT FOR THE BENEFIT OF

PRINCIPAL ORDERS ISSUED IN PREPARING FOR SPANISH-
AMERICAN WAR, AND RELATING TO MATTERS
GROWING OUT OF SAID WAR.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 4, 1898.

GENERAL ORDERS }
No. 3. }

(1.) The commanding officers of the First Brigade, the First Naval Battalion and the Veteran Corps, Fifth Regiment Infantry, will order the medical officers of their respective commands to report to the Surgeon General, at a time and place to be named by the Surgeon General in a communication to be addressed by him to each and every of said commanding officers, for the purpose of considering what medical and hospital stores and equipment are necessary for the Maryland National Guard as now organized.

(2.) The Surgeon General will, without delay, after conferring with the medical officers aforesaid, submit to these Headquarters a statement and report showing what medical and hospital stores and equipment are necessary for the purposes aforesaid, and the itemized cost thereof as nearly as may be.

BY COMMAND OF GOVERNOR LOWNDES :

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 5, 1898.

GENERAL ORDERS }
No. 4. }

In accordance with the authority vested in the Commander-in-Chief by Section 9, of Article 65 of the Code of Public General Laws of the State of Maryland, as re enacted with amendments at the January Session of 1896 of the General Assembly of Maryland, the Commanding Officer of the 1st Brigade, Maryland National Guard, is hereby directed to enlist and form a Signal Corps, as a part of his brigade, and to confer with these headquarters, from time to time, as occasion may require, in the progress of the organization of the corps.

BY COMMAND OF GOVERNOR LOWNDES :

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 16, 1898.

GENERAL ORDERS }
No. 6.

(1.) All officers of the Maryland National Guard who, either on account of age or other physical disability, shall be adjudged unfit for active military duty in the field, shall be placed on the retired list by General Orders from these Headquarters.

(2.) Officers placed on the retired list are authorized to retain their uniforms and side arms and to wear the same on occasions of ceremony, but they shall not exercise command unless required by the commander-in-chief.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD.

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 16, 1898.

GENERAL ORDERS }
No. 7.

All Staff Officers under the present State organization whose services may not be required in the event that the organization to which they belong shall be sworn into the service of the United States, shall be placed on waiting orders until their services may be needed.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 16, 1898.

GENERAL ORDERS }
No. 8.

(1.) The commanding officers of the First Brigade and the First Nava Battalion will forthwith cause a physical examination to be made of every officer and enlisted man in their respective commands, not heretofore examined, by a Board of Medical Officers to be appointed by said commanding officers.

(2.) The said commanding officers shall, at the same time, also cause strict inquiry to be made of every officer and enlisted man in their respective commands found physically qualified for active military duty

in the field, as to his willingness to enter the service of the United States, with the organization to which he now belongs, for duty either at home or abroad, for such time as may be prescribed by the President or the Congress of the United States.

(3.) Any officer not willing to enter the service of the United States, as above indicated, will be requested and permitted to tender his resignation; and every enlisted man found physically disqualified for active duty in the field or not willing to enter such service will be given an honorable discharge.

(4.) All vacancies among officers existing after the foregoing provisions of this order shall have been carried into effect shall be provisionally filled by the Commander-in-Chief, who, so far as may be, will commission such officers to fill vacancies as may be agreeable to the officers of the organization, and approved by the said commanding officer of the First Brigade and First Naval Battalion, respectively, as the appointment affects the command of the one or the other.

(5.) All vacancies among enlisted men existing after the foregoing provisions of this order shall have been carried into effect shall be immediately filled by enlistment of men physically qualified and willing to enter the service of the United States, so that each Company of the Brigade and each Division of the Naval Battalion shall be recruited to the full strength authorized by the Militia Law of this State.

(6.) As each company and division shall be recruited to its authorized strength, report thereof will be promptly made to these Headquarters.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 20, 1898.

GENERAL ORDERS }
No. 9. }

Upon the report and recommendation of the Commanding Officer, First Brigade, M. N. G., that Company I, First Regiment, Infantry, Maryland National Guard, is not up to the proper standard of numbers, efficiency and discipline, the said company is hereby disbanded and mustered out of service.

The Brigade Commander will take necessary steps to secure all State and United States property in the possession of said company, and will cause the same to be turned in to the Acting Quartermaster General.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

EXECUTIVE OFFICE,

ANNAPOLIS, MD., April 21, 1898.

THE STATE OF MARYLAND,

To Major General L. Allison Wilmer,

Adjutant General of Maryland, Greeting :

WHEREAS, A state of war exists between the United States and Spain whereby it may become necessary to order out the Maryland National Guard, as now organized, or some portion thereof, to assist or co-operate with the United States Government in the prosecution of said war, and to protect the State of Maryland, and to organize other military organizations for the service of the United States and for the defense and protection of the State, and to quell any internal disturbance within the State of Maryland during the continuance of said war :

Be it known, that by virtue of the authority vested in me by Section 34 of Article LXV, of the Code of Public General Laws of Maryland, as reenacted with amendments at the January Session of 1896, of the General Assembly of Maryland :

I, LLOYD LOWNDES, Governor of Maryland and Commander-in-Chief of the land and naval forces of the State, do hereby delegate, assign and order you to assume command of all Maryland Troops now organized and to be hereafter organized as occasion may require, and in pursuance of the authority hereby vested in you, to do all such things as may be necessary as the Commanding Officer of said Troops until this authority shall be revoked.

THE GREAT SEAL
OF THE
STATE OF MARYLAND.

Given under my hand and the Great Seal of the State of Maryland, at the City of Annapolis, on this 21st day of April, in the year of our Lord one thousand eight hundred and ninety eight.

LLOYD LOWNDES.

BY THE GOVERNOR ;

RICHARD DALLAM,

Secretary of State.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MARYLAND,

April 21st, 1898.

GENERAL ORDERS {
No. 1.

(1.) By authority of the Governor of Maryland, as Commander-in-Chief of the land and naval forces of the State, I do hereby "assume command of all Maryland troops now organized or to be hereafter organized, as occasion may require," during the state of war which now exists between the United States and Spain, for any duty or service said troops (land and naval) or any portion thereof may have to perform within the State, either in aid of the United States or in suppressing any riots or disorder that may occur within the State.

(2.) This order in no manner affects, nor will it affect, the authority or the status of the Commanding Officers of the First Brigade, the First Naval Battalion, the Veteran Corps, Fifth Regiment Infantry, or any organization to be hereafter formed.

(3.) All of said Commanding Officers will, until further orders, or until mustered into the service of the United States, report to "The Major General Commanding Maryland State Forces," whose Headquarters, for the present, will be Annapolis, Maryland.

(4.) The co-operation of all Commanding Officers is asked in our common purpose to serve our country, and to protect and defend our State.

L. A. WILMER,

Major General Commanding

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 22, 1898.

GENERAL ORDERS }
No. 10.

The Major General Commanding the Maryland State Forces will order an encampment of the First Brigade, or such portions thereof as may be designated, at Pimlico, in Baltimore county, at such time and for such length of time as may be deemed advisable.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MARYLAND,

April 22d, 1898.

GENERAL ORDERS }
No. 2.

(1.) By virtue of orders from the Governor and Commander-in-Chief there will be an encampment of the First Brigade, Maryland National Guard, at Pimlico, Baltimore county, Maryland, commencing on Monday, April 25th, 1898, for such length of time as may be prescribed in future orders.

(2.) The Acting Quartermaster General will have the necessary camp equipage and quartermaster stores transported to Pimlico, and will provide transportation for troops under the direction of the Brigade Commander.

(3.) The camp will be under the command of Brigadier General Lawrason Riggs, Commanding First Brigade, and he will issue all necessary orders for the formation of the camp and the mobilization and subsistence of the troops of his Brigade.

(4.) The camp is established for the further instruction and discipline of the Brigade, and for completing its organization, armament and equipment preparatory to any service that may be required either by the National or State Government.

L. A. WILMER,

Major General Commanding.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 26, 1898.

GENERAL ORDERS }

No. 11.

(1.) Major Charles R. Spence is hereby relieved from duty as Acting Quartermaster General, with the thanks of these Headquarters for his faithful efforts in the discharge of his duties.

(2.) Brigadier General Thomas S. Mumford, Inspector General, in addition to his other duties, is hereby assigned to duty as Acting Quartermaster General.

(3.) Major Spence will turn over to General Mumford all unissued quartermaster and ordnance stores, taking receipts therefor, and will make up his accounts to the first of May, 1898, for all contracts and expenditures made by him as Acting Quartermaster General, and deliver the same to General Mumford who will make report thereof to the Major General Commanding Maryland State Forces.

(4.) General Mumford will forthwith proceed to take an account of all quartermaster and ordnance stores issued to any organization of the Maryland National Guard, including a particular account of all tentage, and report result thereof to the Major General Commanding Maryland State Forces, so that in the event that any regiment should be called into the service of the United States, a statement of all uniforms, arms and equipment in its possession may be readily made.

(5.) The Brigade Commander will afford to General Mumford all facilities possible for the execution of his duties under this order.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, April 27, 1898.

GENERAL ORDERS }

No. 12.

(1.) A Military Board is hereby appointed under the provisions of Section 23 of the Act of 1896, Chapter 89, for the purpose of examining into the capacity, qualification, propriety of conduct and efficiency of any commissioned officer who may be ordered before said Board for examination. Detail for the Board: Lt. Col. R. Dorsey Coale, 5th Regt. I., M. N. G., Capt. Fred. I. Mosher, Co. A, 4th Regt. I., M. N. G., Capt. George L. Fisher, Co. B, 1st Regt. I., M. N. G., Capt. James D. Iglehart, Asst. Surgeon, 5th Regt. I., M. N. G., and Capt. John G. Jay, 4th Regt. I., M. N. G.

(2.) The Board will sit at Brigade Headquarters, or such place as may be designated by the Brigade Commander, at Camp Wilmer, Pimlico, during the present encampment, whenever it may be necessary. The examination of any officer appearing before the Board will be, primarily, directed to an ascertainment of his technical and practical knowledge of drill regulations, and if the officer should prove deficient in these the examination need not be pursued; but the Board may inquire into the general efficiency, or into any matter likely to affect the efficiency, of the officer examined.

(3.) No stenographer will be employed by the Board and no recorder will be appointed, but the Board shall make up its reports and certify its conclusions and recommendations in writing, duly signed by the Board or a majority thereof, to these headquarters, through proper channels.

(4.) The Brigade Commander is hereby authorized to order any officer of his command before said Board for examination; but any officer so ordered may, before he appears before said Board, tender his resignation or be placed upon the retired list at his request. And should the report of the Board be adverse, in any case, the Brigade Commander, before transmitting the report, shall offer the officer so adversely reported upon the opportunity to resign or to be placed upon the retired list at his request, and, in this case, the adverse report shall not be sent to these headquarters.

BY COMMAND OF GOVERNOR LOWNDES :

L. ALLISON WILMER,
Adjutant General.

A PROCLAMATION.

EXECUTIVE OFFICE,

ANNAPOLIS, April 27, 1898.

WHEREAS, The President of the United States has issued his proclamation calling for Volunteers for service in the Army of the United States, and it has been certified to me by the Honorable the Secretary of War that the quota for Maryland is

One Regiment of Infantry,
Four Batteries of Heavy Artillery :

NOW, THEREFORE, I, Lloyd Lowndes, Governor of Maryland and Commander-in-Chief of the land and naval forces of the State, do hereby call upon such organizations or parts of organizations of the Maryland National Guard as may be selected, and may be willing to volunteer for the service of the United States, so that the present quota required from Maryland may be filled, as nearly as may be, from the organized Militia. And I do further call for such Volunteers, from the State at large, as may be necessary to recruit organizations selected and volunteering to the full authorized strength.

Major General L. Allison Wilmer, Commanding the Maryland State Forces, is hereby directed and commanded to take such steps and issue such orders as may be necessary to carry this Proclamation into effect as speedily as possible, and to report to the War Department as soon as any required organization may be ready for service.

THE GREAT SEAL
OF THE
STATE OF MARYLAND.

Given under my hand and the Great Seal of the State of Maryland at the City of Annapolis, on this 27th day of April, in the year of our Lord one thousand eight hundred and ninety-eight.

LLOYD LOWNDES.

BY THE GOVERNOR :

RICHARD DALLAM,
Secretary of State.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS MARYLAND, April 27, 1898.

GENERAL ORDERS }
No. 3. }

(1.) In obedience to the proclamation and order of the Governor and Commander-in-Chief, of this date, calling for one regiment of infantry and four batteries of artillery, the quota of Maryland troops required by the President of the United States for the service of the United States, it is hereby ordered that the Fifth Regiment Infantry, Maryland National Guard, be, and the said organization hereby is, called to volunteer for service in the volunteer Army of the United States as the Regiment of Infantry.

Subject to such change as may be necessary by any law of the United States or regulation of the War Department, the regiment will be officered and organized as follows:

FIELD AND STAFF:

One colonel, one lieutenant colonel, two majors, one adjutant (extra Lt.) one quarter-master (extra Lt.,) one surgeon, two assistant surgeons, one chaplain, one sergeant major, one quarter-master sergeant, one chief musician, two principal musicians and three hospital stewards.

Twelve companies each constituted as follows:

One captain, one first lieutenant, one second lieutenant, one first sergeant, one quarter-master sergeant, four sergeants, twelve corporals, two musicians, one artificer, one wagoner and fifty-nine privates.

All officers in said regiment fit for service and willing to volunteer will retain their present positions and rank, except as changes may be necessary by the changes of organization above prescribed.

(2.) The four batteries of heavy artillery will be officered and organized as follows:

There shall be in each battery one captain, one first lieutenant, two second lieutenants, one first sergeant, twenty-two sergeants, ten corporals, two musicians, two artificers, one wagoner, and one hundred and eight privates, subject to such change as may be necessary by any law of the United States or regulation of the War Department.

And it is hereby ordered that the Fourth Regiment Infantry, Maryland National Guard, be and the same is hereby called to volunteer for service in the Volunteer Army of the United States for the organizing of said batteries, the officers to be selected, as far as practicable, from the present Fourth Regiment officers, with the possibility that a field officer may be selected from said organization.

The officers remaining in said regiment after the organization of the four batteries required as above set forth, will not, except for good and sufficient cause, lose their commissions; but their services will be availed of, if occasion require, in organizing or re-organizing another regiment for future emergency.

At the termination of service in the United States Army of the officers and men of the Fourth Regiment thus volunteering, it will be recommended and urged that the regiment shall be converted into a permanent heavy artillery regiment, of the Maryland National Guard.

(3.) That recruiting may be rapid and effective as possible it is asked that men from the First Regiment, willing to enlist under the present call, shall be afforded opportunity to enlist in the Fifth Regiment, by proper transfers, their places to be supplied, by recruiting, on the return of the several companies to their respective armories.

Captains of companies in the First Regiment will make record of the men offering to enlist as above suggested, and a record of those accepted and transferred to the Fifth Regiment, and return copies thereof, through proper channels, to these Headquarters that the names may be placed upon a roll of honor in the office of the Adjutant General.

No enlisted man will be retained and no man will be enlisted who is in years over forty-five or under eighteen, or who is not in physical strength and vigor.

(4.) The Commanding Officer of the First Brigade will, under the direction of the Major General Commanding, assume direct supervision of the reorganization and the recruiting of the Fifth Regiment and the four batteries of heavy artillery in accordance with the terms and provisions of this order, and when any of said organizations shall be complete, he will report that fact to the Major General Commanding, with a roster of the command so that the names may be placed upon a roll of honor in the office of the Adjutant General, and an additional and separate list of all officers, to the end that they may be re-commissioned on the mustering in of the organization into the service of the United States.

(5.) In the promulgation of this order every condition of the service is taken into consideration with a view of producing the best results; and the loyalty, devotion to duty and discipline which have always marked the Maryland National Guard are relied upon for a hearty and prompt response to this call.

L. A. WILMER,

Major General Commanding.

HEADQUARTERS

FIRST BRIGADE MARYLAND NATIONAL GUARD,

CAMP WILMER, PIMLICO, MD., April 27th, 1898.

GENERAL ORDERS }

No. 4. }

(1.) The Officers of the Fourth Regiment Inf., M. N. G., having declined, for their regiment, to organize the four batteries of Heavy Artillery required as part of the quota from Maryland, under the call of the President of the United States, as certified to the Governor of Maryland by the Honorable Secretary of War, so much of G. O. No. 3, Headquarters Maryland State Forces, of this date, as relates to the said Fourth Regiment Inf., M. N. G., and to the transfer of men from the First Regiment I., M. N. G., to the Fifth Regiment I., M. N. G., is hereby revoked.

(2.) The Officers of the First Regiment I., M. N. G., having signified their willingness to help to organize said batteries from said First Regiment I., M. N. G., the said batteries will be organized from said First Regiment, as far as the men are willing to enlist and their numbers will permit, the batteries to be recruited by new enlistments, and the officers to be selected, as far as practicable, from the present First Regiment I., M. N. G. officers.

(3.) The officers remaining in said First Regiment after the organization of the four batteries required, as set forth in G. O. No. 3 aforesaid, will not, except for good and sufficient cause, lose their commissions; but their services will be availed of, if occasion require, in organizing and reorganizing another regiment for future emergency.

L. A. WILMER,

Major General Commanding.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MD., April 29th, 1898.

GENERAL ORDERS }

No. 5. }

WHEREAS, The promulgation of General Orders No. 3 from these Headquarters, of date April 27, 1898, was based upon a communication from the Secretary of War of date April 25, 1898, to the Governor of

Maryland, enclosing a schedule setting forth the numbers of officers and men required for batteries of heavy artillery and companies of infantry, the number of privates in the batteries being placed in said schedule as one hundred and eight maximum and the number of privates in said companies being placed at fifty-nine privates maximum; and

WHEREAS, In said General Orders No. 3 it was prescribed that the organization of the regiment of infantry and the batteries of artillery was to be "subject to such change as may be necessary by any law of the United States or regulation of the War Department;" and

WHEREAS, It appears that Captain Walter L. Finley, Ninth Cavalry, the officer detailed by the Major General Commanding the United States Army to muster into the service of the United States, for the State of Maryland, the troops called out by the President's Proclamation of the 23rd instant, is in receipt of a copy of an Act of Congress approved April 26, 1898, being "Public Number 70. An act for the better organization of the line of the Army of the United States," wherein it is provided that the number of privates in a company of infantry shall be eighty-four and the number of privates in a battery of heavy artillery shall be one hundred and sixty-two.

It Is HEREBY ORDERED, That the reorganization of the Fifth Regiment Infantry, Maryland National Guard, for the service of the United States, and the organization of the batteries of heavy artillery for the service of the United States, shall be in accordance with the provisions of the Act of Congress aforesaid.

L. A. WILMER,
Major General Commanding.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, April 30th, 1898.

GENERAL ORDERS } No. 6.

(1.) The apportionment of troops for Maryland having been changed by the Honorable the Secretary of War, in a letter of even date herewith to the Governor of Maryland, requiring two battalions of Infantry in place of four batteries of Heavy Artillery, so much of G. O. No. 3, Headquarters Maryland State Forces, of date April 27th, 1898, as relates to the organization of four heavy batteries, is hereby revoked.

(2.) In pursuance, also, of said letter from the Secretary of War, the organization of the regiment of Infantry shall include, in addition to the officers prescribed in said G. O. No. 3, one Major, three Battalion Adjutants and three Battalion Sergeant Majors; and the companies shall consist of fifty-five privates, instead of fifty-nine.

(3.) Two battalions of Infantry shall be organized from the First Regiment of Infantry, M. N. G., as follows:

Field, Staff and non-commissioned Staff.

One Lieutenant Colonel, two Majors, two Assistant Surgeons, two battalion Adjutants, two Sergeant Majors and two Hospital Stewards.

Eight companies to be officered and organized in the same manner as the companies of the regiment of infantry.

(4.) Brigadier General Lawrason Riggs, commanding First Brigade, M. N. G., will proceed, without delay, to direct the organization of the regiment and the two battalions of infantry in accordance with this order, recruiting two additional companies for the two battalions in accordance with the verbal orders and instructions this day given him.

L. A. WILMER.
Major General Commanding.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MD., May 4, 1898.

GENERAL ORDERS }
No. 7.

WHEREAS, By paragraph 4 of G. O. No. 2, Headquarters Maryland State Forces, of date April 22, 1898, it is particularly prescribed that "the camp (at Pimlico) is established for the further instruction and discipline of the Brigade, and for completing its organization, armament and equipment preparatory to any service that may be required either by the National or State Government." And,

WHEREAS, It seems that certain enlisted men of both the Fifth and First Regiments reported for duty with no purpose of preparing for service, etc., as evidenced by their departure from camp.

IT IS HEREBY ORDERED, That the name of no enlisted man of either the Fifth or the First Regiment reporting for duty in camp at Pimlico without the *bona fide* intention of enlisting, with his command, in the service of the United States, if this should be asked of him, shall be entered or reported upon the pay roll of his regiment.

L. A. WILMER,

Major General Commanding.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, May 6, 1898.

GENERAL ORDERS }
No. 18.

(1.) The Major General Commanding Maryland State Forces is hereby authorized, empowered and directed to appoint, as his personal staff, two Aids to be commissioned as First Lieutenant and Second Lieutenant, respectively, to be assigned to such duty in the Adjutant General's Office and at Headquarters Maryland State Forces, or elsewhere, as may be prescribed by the Major General Commanding.

(2.) These Commissions will be revoked at any time on the recommendation of the Major General Commanding, and the pay of these Officers shall be the same as the pay prescribed for First Lieutenant and Second Lieutenant, respectively, not mounted, in the Army of the United States, by the regulations governing the pay of such officers in the United States Army; provided, that should the Clerk to the Adjutant General be appointed Aid with the rank of First Lieutenant, he shall be credited with his pay as such Clerk.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MD., May 6, 1898.

GENERAL ORDERS }
No. 8.

(1.) In pursuance of G. O. No. 18, Headquarters Maryland National Guard, of even date herewith, the following Officers have been appointed and commissioned:

H. Heber Boswell, First Lieutenant and Aid to the Major General Commanding Maryland State Forces.

Chester F. Johnston, Second Lieutenant and Aid to the Major General Commanding Maryland State Forces.

They will be obeyed and respected accordingly.

(2.) Each of said Officers is assigned to duty in the Adjutant General's Office and at Headquarters Maryland State Forces, for such work as may be required of them.

(3.) First Lieutenant H. Heber Boswell is authorized as Aid to authenticate all Orders from these Headquarters.

GENERAL ORDERS }
No. 49.

(1.) The camp at Pimlico will be broken on Monday, May 16, 1898, after the First Regiment shall have been mustered into the service of the United States.

(2.) All unissued State property will be turned over to the Acting Quartermaster General and taken possession of by him.

(3.) The Brigade Commander will detail such officers and men as may be necessary to secure and protect unissued State property until same shall have been delivered to the Acting Quartermaster General and properly stored under his direction.

(4.) In closing this encampment the Governor and Commander-in-Chief desires to thank the Brigade Commander, Brigadier General Lawrason Riggs, for his earnest, intelligent and cheerful co-operation with the Major General Commanding in the work of preparing, under most adverse circumstances, the Regiment and two Battalions of the National Guard, required of Maryland, for the service of the United States in the present war with Spain.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, May 24, 1898.

GENERAL ORDERS }
No. 51. }

Paragraph I of G. O. No. 16, Headquarters Maryland National Guard, of date December 15, 1897, is hereby amended as follows:

The authorized enlisted strength of Troop "A", First Brigade, Maryland National Guard, shall be as follows: One First Sergeant, one Quartermaster Sergeant, six Sergeants, eight Corporals, two Farriers and Blacksmiths, two Trumpeters, one Sadler, one Wagoner, seventy-eight Privates; total enlisted, one hundred.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, May 30, 1898.

GENERAL ORDERS }
No. 52. }

(1.) The Acting Quartermaster General will report, without delay, to these headquarters a complete and accurate inventory of all Quartermaster and Ordnance stores now on hand, furnished to the State of Maryland by the United States Government for the use of the Militia and purchased by the State for the use of the National Guard, showing specifically what stores are issued and to whom, and what stores are unissued and how secured.

(2.) The Commanding Officers of the Maryland National Guard and all Quartermaster and Ordnance Officers are hereby directed to afford every facility to the Acting Quartermaster General for the prosecution of this work and to render him any assistance he may require of them for the completion thereof.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, MD., June 4, 1898.

GENERAL ORDERS }
No. 53. }

To encourage enlistment in Troop "A," First Brigade, Maryland National Guard, and to promote the efficiency thereof, the following additional rules and regulations for the Government of said Troop are hereby promulgated:

(1.) Troop "A" shall drill not less than one day in each week for at least two and a half hours at each drill.

(2.) To compensate the members of the Troop for use, hire and service of horses a fund shall be created as follows:

(a) The sum of five dollars per month for each member of said Troop, less credits for absence as hereinafter provided for, shall be paid by the Adjutant General out of the appropriation for the militia, the warrant for the aggregate to be issued at the expiration of each month in favor of the fiscal officer of the Troop to be appointed by the Brigade Commander and approved by the Major General Commanding.

(b) The sum of one dollar, for each offense, shall be paid by or charged against each and every member of the Troop who shall fail to attend a drill in any given week.

(3.) Out of the fund so created the fiscal officer shall pay, at the end of each month, to each and every member of the Troop the sum of five dollars, less the amount charged against him and not paid for absences, as prescribed in Paragraph 2 b. of this order.

(4.) A consolidated monthly Morning Report of Troop "A" shall be made up at the end of each month and forwarded to the Adjutant General, through proper channels, and with this Report shall be forwarded a statement and account of the fiscal officer showing the amount due by the State under this Order, after deducting charges for non-attendance not paid.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,
Adjutant General.

A PROCLAMATION.

EXECUTIVE OFFICE,

ANNAPOLIS, June 8, 1898.

WHEREAS, The President of the United States has issued his Proclamation calling for additional Volunteers for service in the Volunteer Army of the United States, and I have been notified by the Honorable the Secretary of War that there are required from Maryland, under this "second call,"

First—580 enlisted men to recruit each of the 20 companies now in service to the maximum of 106 enlisted men.

Second—A battalion of four companies, each to be composed of 3 officers and 106 enlisted men, to be assigned to the First Maryland U. S. Volunteers, now composed of two battalions, thus making a full regiment:

NOW, THEREFORE, I, Lloyd Lowndes, Governor of Maryland and Commander-in-Chief of the land and naval forces of the State, do hereby call for such volunteers as may be necessary to complete the organization of each of the companies of the Fifth and First Regiments now in service to 106 enlisted men, to be recruited under such rules and regulations as may be prescribed by the War Department.

And I do further call upon the Fourth Regiment of Infantry, Maryland National Guard, to furnish the one battalion required of Maryland as hereinbefore set forth, if the regiment be willing to volunteer for this purpose, the officers to be selected by the organization and their names to be submitted to me, through the regular channels, for approval before any commission shall be issued.

Major General L. Allison Wilmer, Commanding the Maryland State Forces, is hereby directed and commanded to take such steps and issue such orders as may be necessary to carry this Proclamation into effect, subject to directions from the War Department; and should the Fourth Regiment be unwilling to furnish the battalion required, then action will

be immediately taken to organize a Third Battalion for the First Regiment, under such rules and regulations as may be prescribed.

THE GREAT SEAL
OF THE
STATE OF MARYLAND.

Given under my hand and the Great Seal of the State of Maryland at the City of Annapolis, on this 8th day of June, in the year of our Lord one thousand eight hundred and ninety-eight.

LLOYD LOWNDES.

BY THE GOVERNOR:

RICHARD DALLAM,

Secretary of State.

HEADQUARTERS MARYLAND STATE FORCES,

ANNAPOLIS, MD., June 8, 1898.

GENERAL ORDERS } No. II.

(1.) In obedience to so much of the Proclamation and Order of the Governor and Commander-in-Chief of even date herewith, as relates to the furnishing of one Battalion of Infantry, it is hereby ordered that the Commanding Officer of the First Brigade, Maryland National Guard, require the Field Officers and company commandants of the Fourth Regiment to appear with him at the Headquarters of the First Brigade in Baltimore City, on Wednesday, June 8, 1898, at 5 o'clock P. M., at which time and place the proposition for the volunteering of said battalion will be submitted by the Major General Commanding, and the matter determined.

(2.) Should the Fourth Regiment volunteer, through its Officers, to furnish the Battalion required, the Officers of said Regiment will, as soon as practicable, hold a meeting under the orders and direction of the Brigade Commander, and select company officers for the four companies, in such manner as the Brigade Commander may prescribe, the names so selected to be submitted, through regular channels, to the Governor and Commander-in-Chief.

(3.) Should the Governor approve the Company Officers selected in accordance with Paragraph 2 of this order, the officers will, on being notified, recommend, through regular channels, a Major of said Battalion, to be finally approved, and, if approved, to be commissioned by the Governor and Commander-in-Chief with the Company Officers aforesaid and a Battalion Adjutant to be named by the Major.

(4.) The Company Officers of the Battalion having been approved by the Governor, each company will be recruited, preferably from members of the Fourth Regiment, to 106 enlisted men, as follows:

1 First Sergeant,
1 Quartermaster Sergeant,
4 Sergeants,
8 Corporals,
2 Musicians,
1 Artificer,
1 Wagoner,
88 Privates.

(5.) As soon as any company of the Battalion shall be recruited, as herein required, notification will be given, through regular channels, that the physical examination of the members may be made in accordance with Army regulations.

(6.) Recruiting will be carried on at the Armory of the Fourth Regiment, but none of the men volunteering will be ordered into service or required to remain in the Armory until further orders.

(7.) When the Battalion shall have been mustered into the service of the United States, measures will be taken, under further orders and such rules and regulations as may be prescribed, for the complete reorganization of the two remaining Battalions of the Fourth Regiment.

(8.) The Brigade Commander will require the Commanding Officer of the Fourth Regiment to give such personal supervision to the execution of this order as may be necessary, and he will also himself, under the direction of the Major General commanding, give personal supervision to the execution of this order.

BY COMMAND OF MAJOR GENERAL WILMER :

H. HEBER BOSWELL,
First Lieutenant and Aid.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, June 11, 1898.

GENERAL ORDERS }
No. 54. }

(1.) The Fourth Regiment having offered a Battalion of four companies to form a part of the First Maryland, United States Volunteers (1st Reg't. I., M. N. G.,) for the service of the United States in the present war with Spain, in accordance with the Proclamation of the Governor and Commander-in-Chief of date June 8, 1898, and the following officers having been selected for said companies, their selection is hereby approved, that is to say:

1st Company.

George F. Haupt, Captain,
Samuel J. Blight, 1st Lieut.,
Charles L. Lyons, 2d Lieut.

2d Company.

Frederick I. Mosher, Captain,
Charles R. Evans, 1st Lieut.,
Orville H. Brown, 2d Lieut.

3d Company.

Louis Schmidt, Captain,
Robert S. Chenoweth, 1st Lieut.,
Harry E. Haynes, 2d Lieut.

4th Company.

Andrew W. Feuss, Captain,
Charles Hahn, 1st Lieut.,
Earnest W. Fetzer, 2d Lieut.

The said officers will rank in the order hereinafter named, from the date of their U. S. Volunteer commissions, as follows:

Captains:

1. George F. Haupt,
2. Frederick I. Mosher,
3. Louis Schmidt,
4. Andrew W. Feuss.

1st Lieutenants:

1. Robert S. Chenoweth,
2. Charles Hahn,
3. Charles R. Evans,
4. Samuel J. Blight.

2d Lieutenants:

1. Earnest W. Fetzer,
2. Orville H. Brown,
3. Charles L. Lyons,
4. Harry E. Haynes.

(3.) All of said officers are hereby detailed for duty in their respective companies as named in Paragraph 2 of this Order until further orders or until such time as their commissions as officers in the Volunteer Army of the United States shall be issued, and they will, under the direction of the Brigade Commander, proceed to name a Major for the approval of the Governor and Commander-in-Chief as soon as practicable.

(4.) The companies shall be provisionally designated as follows:

1st Company.....	Company "H."
2d Company.....	Company "I."
3d Company.....	Company "M."
4th Company.....	Company "L."

(5.) The Battalion constituted by these companies will, on being mustered into the service of the United States, be assigned to the First Maryland United States Volunteers (1st Reg't. I., M. N. G.), thus making a full regiment, in accordance with the determination of the Honorable the Secretary of War, and the officers will be commissioned accordingly at the time of being mustered into the service of the United States.

(6.) The Battalion thus constituted is hereby detached from the Fourth Regiment Infantry, Maryland National Guard, for the purpose of enabling it to enter the service of the United States, but until the Battalion shall be mustered into the service of the United States its officers will hold themselves, with their commands, subject to the orders of their present superior officers. On being mustered out of the service of the United States they will forthwith report for duty to the Commanding Officer of the Fourth Regiment Infantry, Maryland National Guard, and resume the positions held by them in said Regiment at the time of the issuing of this order.

BY COMMAND OF GOVERNOR LOWNDES:

L. ALLISON WILMER,

Adjutant General.

HEADQUARTERS MARYLAND NATIONAL GUARD,

ADJUTANT GENERAL'S OFFICE,

ANNAPOLIS, June 15, 1898.

GENERAL ORDERS }

Report of the Acting Quartermaster General.

OFFICE QUARTERMASTER GENERAL,

ROOM 404 MERCHANTS BANK BUILDING,

BALTIMORE, MD., December 12, 1899.

*To the Adjutant General, State of Maryland,**Annapolis, Maryland:*

SIR:—I have the honor to submit the following report of the operations of the Quartermaster General's Office for the years 1898 and 1899, respectively.

OPERATIONS OF 1898:

In obedience to General Order No. 10, A. G. O., Annapolis, Md., April 26, 1898, I assumed the duties of Acting Quartermaster-General, State of Maryland, relieving Major C. R. Spence, Chief Quartermaster First Brigade M. N. G., therefrom, and proceeded with the work of supplying and equipping the State troops preparatory to their muster into the United States service for duty in the war with Spain.

The needs of these troops to properly equip and prepare them for active service (including expenditures to maintain the remainder of the force assembled), necessitated the expenditure of \$76,461.52. Purchases were made in open market, but with a due regard to the interest of the State. All supplies so purchased by me were subject to proper inspection before being accepted, and disbursements on account of all purchases of supplies, hire of labor, teams, etc., were promptly settled as fast as the accounts could be prepared, examined and approved.

Under the first call for Volunteers by the President of the United States the quota furnished from the State of Maryland was one Regiment of Infantry of 50 officers and 961 enlisted men, and one Battalion of Infantry consisting of 32 officers and 626 enlisted men, an aggregate strength of 1,669.

The full strength of the command borne on the State rolls in camp from April 25, to May 17, 1898, aggregates a daily average of 89 officers and 1,228 enlisted men; total, 28,973.

On the second call for Volunteers by the President, the State furnished one Battalion of 16 officers and 426 enlisted men, making the entire strength (including 26 officers and 430 enlisted men of the First Naval Battalion, M. N. G.,) mustered into the

United States service, which was supplied and equipped by the Quartermaster's Department, to consist of 124 officers and 2,443 enlisted men.

The total amount of funds received by me, \$83,476.27, is as follows:

RECEIPTS.

From the Adjutant General (by warrant)	\$82,625 36
" Major C. R. Spence (transfer of funds).....	390 53
" sale of lumber at Pimlico, Md	383 63
" " iron pipe.....	25 00
" " cookstove.....	3 00
" " campaign hats.....	38 75
" rebatement on purchase of typewriter.....	10 00
Total received.....	<u>\$83,476 27</u>

DISBURSEMENTS.

Transferred to Adjutant General.....	\$5,514 75
" Major Allan McLane.....	1,500 00
Paid out on account of Troops accepted by U. S..	57,314 81
" " Naval Battalion.....	12,251 45
" " remainder troops in camp	6,895 26
Total.....	<u>\$83,476 27</u>

The cost per capita, exclusive of the clothing on hand, amounted to.....\$23 96
Including the same..... 32 09

The amount per diem per man for subsistence paid by this Department was 25.16.

The total cost to the State to assemble, clothe, feed and equip the troops and Naval Battalion (124 commissioned officers and 2,443 enlisted men), accepted and mustered into the service of the United States, aggregates as follows:

Purchase of Q. M. Supplies.....	\$5,717 99
Transportation of troops, etc.....	8,810 76
Purchase of new clothing.....	34,255 96
Purchase of ordnance.....	996 16
Purchase of subsistence.....	7,138 35
Hire of labor, Subsistence Department.....	786 50
Value of serviceable clothing issued.....	20,874 51
Total for Infantry Arm.....	<u>\$78,580 23</u>

Second—1st Naval Battalion, 26 Officers and 430 enlisted men:

Purchase of clothing.....	\$10,718 84
Purchase of supplies, various.....	891 56
Hire of labor.....	111 88
	<u>11,722 28</u>
Total.....	<u>\$90,302 51</u>

Articles, such as lumber, iron pipe, etc., used at Camp Wilmer during its occupancy by the State troops (no longer required) have been sold to the best advantage possible, and the amount realized for such portions of the same as was properly chargeable to the United States has been deposited to the credit of the Treasurer of the United States; the balance so realized taken up as State funds and properly accounted for. All property purchased for use of the troops while in camp and which was not transferred to the United States has been gathered together and stored in the Fifth Regiment Armory. It has been thoroughly overhauled and carefully packed away in cases with moth balls, nevertheless, it requires constant attention, and as the store-room will soon be required for the equipments of the regiment I would recommend that a roomy and well ventilated storehouse be secured for its preservation. Much time and attention is now being devoted to hunting up all articles of both State and United States property, much of which (particularly United States property) is known to be missing. With this end in view it is essential that all officers accountable for either State or United States property be directed to render to this office semi-annual returns of the same.

OPERATIONS OF 1899.

The work devolving upon this Department during the current year has been the clothing and equipping of the Fifth Regiment, Infantry, Maryland National Guard, and First and Second Battalions, Fourth Regiment, I., M. N. G., and the proper preparation of the accounts arising out of the State's claim for reimbursement from the United States Government of moneys expended to equip the United States Volunteers in the war with Spain.

THE WAR CLAIM.

The accounts prepared by this office (\$90,302.51) and that of the Adjutant General (\$44,380.25) aggregated \$134,682.76. Of this amount \$113,808.25 was actual cash disbursements; the balance, \$20,874.51, represents the money value of clothing and supplies on hand belonging to the State and transferred to Fifth and First Regiments, Maryland United States Volunteers. Seventy-eight thousand one hundred and fifty-three dollars and sixty-five cents (\$78,153.65) has already been returned to the State, leaving a balance due of \$56,529.11. The answer to the *suspensions*, as embodied in the statement of differences of the Auditor of the War Department, should ensure an additional payment or payments amounting to \$52,564.50, thus securing to the State, when this claim is finally settled, reimbursement in the amount of \$130,718.15, or \$16,909.90 more than actual cash

Total saving of..... \$3,982 31

The following table explains the manner of distribution of the above articles:

TO WHOM ISSUED.	Officers' Caps.	Woolen Blankets.	Blouses.	Trousers.	Overcoats.	Campaign Hats.	Leggins.	N. C. Staff	Sergeants' Chevrons.	Corporals' Chevrons.	Sergeants' Stripes.	Corporals' Stripes.
Fourth Infantry.....	375	556	556	206	556	686	56	110	154	60	148
Fifth Infantry.....	54	877	767	767	767	822	803	75	96	192	80	150
Total	54	1252	1323	1323	973	1378	1489	131	206	346	140	298

In addition to the new clothing purchased and distributed, as shown by the above figures, the following articles made into sizes are ready for issue:

Four hundred and fifty-four blouses, 183 pairs trousers, 41 overcoats and 600 pairs leggins.

The work of providing the Third Battalion, of the Fourth Infantry, M. N. G., with clothing is now in process of operation, and such part of the uniform, not on hand, will soon be ready for examination and distribution.

TENTAGE.

There is practically no tentage on hand for the use of the Guard in case of emergency. Of the amount now on hand, namely, 144 common tents, 18 hospital tents and 32 wall tents, 80 of the common tents are unserviceable. Letter from this office dated June 30th, 1899, sets forth the tentage required for use of the troops in this State. In asking for new tentage I would recall the report of a Board of Army Officers recommending the use of drab-colored tents, this report has the approval of the Secretary of War; and the reasons set forth by this Board for the change are so conclusive that I believe it would be to the interest of the Militia to be furnished with canvas of the same material.

ORDNANCE AND ORDNANCE STORES.

The followed named articles of ordnance and ordnance property received from the United States government were distributed and invoiced to the National Guard as follows:

To Whom Issued.	Springfield Rifles, Cal. 45. Model 1878.	Bayonet Scabbards, Cal. 45. Hook Attachments.	Cartridge Belts and Plates.	Blanket, Bags and Straps, complete.	Haversacks and Straps, Complete.	Canteens and Straps, complete.	Meat Cans.	Tin Cups.	Knives, Forks and Spoons, each kind.	Leather Belts and Plates,	Arm-Chests.

PROPERTY ACCOUNTABILITY.

After eighteen months constant and steady search for missing military property (both United States and State), I am able to present herewith a complete record (see table marked "A") to which especial attention is invited of the State's accountability. This record shows in detail (Naval Battalion excluded) the quantities and whereabouts of nearly all the United States property; and, so far as this office is in possession of data to work from, the entire military property owned by the State, amounting in value to over \$50,000.

As it is probable that for many years no accurate inventory has been obtained until the present time—a matter of very great importance when the expense of purchasing new property is considered—it will readily be seen that too much stress cannot be laid on the necessity for a scrupulous attention to the care and preservation of public property, and a prompt rendition of semi-annual returns by all officers, especially regimental quartermasters responsible for the same.

Much labor has been thrown on this office in locating United States property—borne on the State return—for which the State is held responsible. Without the assistance of those in charge of property, an accurate return is an impossibility.

I desire to make note of the services of Mr. J. C. Marshall, retired Quartermaster-Sergeant United States Army. His experience in this department in issuing supplies and looking after the State's property, and his familiarity with technical clerical details incidental to the proper preparation of accounts for the War Department, have been of much assistance to me and valuable in securing early action by the United States Government on the State's war claim.

Very respectfully,

T. S. MUMFORD,

*Brigadier General and Acting Quartermaster General,
State of Maryland.*

REPORT OF THE INSPECTOR GENERAL.

INSPECTOR GENERAL'S OFFICE,

BALTIMORE, MD., December 31, 1899.

*To the Adjutant General, State of Maryland,**Annapolis, Maryland.*

SIR: I have the honor to submit herewith my reports of inspection of the State troops for the years 1898 and 1899, respectively.

Inspection 1898—Troops mobilized at Camp Wilmer, Pimlico, Maryland, preparatory to their muster into the United States service for duty in the war with Spain.

In obedience to orders from the Adjutant General's Office, dated Annapolis, Md., April 23rd, 1898, the entire Brigade, M. N. G., of the State, mobilized at Pimlico, Maryland, April 25th, 1898, was as follows:

Brigade Staff, 8 Commissioned Officers and 5 Non-Commissioned Officers. Total.....								13
First Regiment, M. N. G., 31 Officers and 340 enlisted men. Total.....								371
Fourth	"	"	44	"	683	"	"	727
Fifth	"	"	50	"	667	"	"	717
First Separate Co.	"	"	3	"	55	"	"	58
Troop "A"	"	"	1	"	31	"	"	32
Signal Corps	"	"	1	"	8	"	"	9
Total.....								1927

This rendezvous was selected by the Brigade Commander, Brigadier General Lawrason Riggs, for the following reasons: Its proximity to the city for supply purposes, its location in reference to steam railways and the two systems of street car lines for transportation purposes, the purity of its water supply, the immediate availability of buildings for temporary offices, storehouses, mess sheds, stables and for sanitary purposes.

Under all the conditions desired it was undoubtedly the most available site offered, notwithstanding the fact that the character of the soil, subjected to almost daily rains for the entire period of the encampment, made the grounds undesirable as a camp site for drill purposes.

The movement of the troops into camp was made too hurriedly, and consequently without proper and sufficient preparation in advance for shelter and supplies. Some of the companies were not issued tentage till late in the night. Under the circumstances tents should have been pitched in advance of the arrival of the troops by pioneer detachments from the several regiments and organizations of the Brigade.

The troops finally mustered into the service of the United States from this encampment was one Regiment of Infantry, known as the Fifth Regiment, Maryland, United States Volunteers, commanded by Col. R. Dorsey Coale, and the First Regiment of Infantry, Maryland, United States Volunteers, (composed of eight companies; eventually increased to twelve by the addition of four companies from the Fourth Regiment, I., M. N. G.), commanded by Col. William F. Lane.

The total strength of these commands was 98 officers and 2,013 enlisted men. Aggregate 2,111.

The First Separate Company, (Colored), under the command of Capt. William R. Spencer, reported in camp previous to the general concentration of the troops to guard the State property, and remained on duty after the departure of the troops and the State property was removed.

During the entire encampment this company performed its duty faithfully and well, its discipline is good and the general good conduct and soldierly manner in which the men performed the duty of guards and sentinels was a frequent topic of favorable comment on the part of superior officers.

This was the first experience of Calvary Troop "A" under the command of Captain Joseph W. Shirley, in camp. The guard work performed was very satisfactory. It has good material as the nucleus of an excellent cavalry troop which can render the City and State good service in event of internal disorder.

QUARTERMASTER'S DEPARTMENT.

In the absence of the Brigade Quartermaster, Major Allan McLane, Judge Advocate of the Brigade, was detailed to take charge of the Quartermaster Department, assisted at first by Captain Isidor Becker, R. Q. M., First Regiment, and afterwards by Captain D. M. Pennington, R. Q. M., Fourth Regiment. There was considerable confusion in this department for several days due to the lack of supplies incident to the hurried concentration of the troops and the want of a recognized system of issue. No fault can, however, be attached to Major McLane, for he was without experience in this duty. On the contrary, much credit is due him for his untiring efforts to provide everything possible for the comfort and protection of the troops.

Tent-floors had been brought from the former encampment at Frederick, Md., and every tent was provided with flooring. There was a full allowance of tentage for the entire brigade. The Fifth Regiment was the only one supplied with mattresses at first. The whole command was furnished with them in a few days. On account of an inadequate supply of water a new tank was built and an abundant supply furnished for all purposes, throughout the entire camp, by a system of water pipes.

SUBSISTENCE DEPARTMENT.

The Subsistence Department was in charge of Major F. W. Coale, Brigade Commissary.

Rations were issued to the Regimental Commissary Officers in bulk and prepared by hired cooks until the troops were mustered into the United States service. The food was of good quality and ample in quantity. There were some complaints at first as to a lack of fresh beef, which was due to inability to have this article supplied as needed in the absence of a cold storage box.

The articles of food supplied consisted of fresh, corned and canned roast beef, mutton, ham, bacon, smoked sausages and eggs, bread, butter, coffee, sugar, salt, pepper, potatoes, beans, rice, cabbages, onions, apples, cheese, tomatoes, corn and string beans.

The Commissary Department was well managed, the cost per ration being only 25 16-100 cents per day.

MEDICAL DEPARTMENT.

Colonel J. M. T. Finney, Chief Surgeon of the Brigade, was in charge of the Medical Department. He was assisted by the Regimental Surgeons in caring for the sick, in carefully watching the sanitary condition of the camp, in looking after its cleanliness and the cooking arrangements, and inspecting the sinks and seeing that they were kept in proper condition. The hospital tents were floored and fully supplied with cots and mattresses and the necessary bedding. The Dispensary, in charge of Stewards from the Medical Department, with attendants, contained all the necessary medical supplies. An analysis was made of the water and pronounced satisfactory as to its purity.

Notwithstanding the incessant rains there was not a serious case of illness in camp, which is evidence of the high character of the service rendered by this department.

Attention is invited to the custom of officers contracting indebtedness against the State without proper authority, thereby entailing much unnecessary labor on the part of disbursing officers in examination of these claims.

Previous to the muster of the State troops into the service of the United States the men were supplied with overcoats, blouses, trousers, flannel shirts, shoes, campaign hats, ponchos, buzzacott ovens, arms, ammunition, etc., together with a full allowance of tentage. (The mounted officers, with horse equipments.)

It will thus be seen that no troops were more thoroughly clothed, armed and equipped ready for war service than those furnished by the State of Maryland.

INSPECTOR GENERAL'S OFFICE,

BALTIMORE, MD., *December 15, 1899.*

In obedience to G. O. No. 10, dated Adjutant General's Office, Annapolis, Md., November 16, 1899, I have the honor to report the result of my inspection of all organizations of the First Brigade, (except the First Regiment I., M. N. G.,) and of the Naval Battalion, M. N. G.

The aggregate strength of the military establishment of the State based on last monthly returns to Brigade Headquarters is as follows:

Brigade Commander and staff.....	15
First Regiment I., M. N. G.....	453
Fourth " " ".....	659
Fifth " " ".....	737
First Separate Company.....	62
Troop "A".....	71
Signal Corps.....	13
Total.....	2,010
First Naval Battalion.....	210
Total.....	2,220

BRIGADE HEADQUARTERS,

BRIGADIER GENERAL LAWRASON RIGGS, Commanding.

The present plan of administration of these headquarters is in striking contrast to that found at the time of my first inspection. The records pertaining to the brigade at that time were so meagre that they were of little assistance in ascertaining the condition of the several organizations composing it. In the last three years the system of government has been advanced to a high condition of future usefulness. Not only are all the necessary books of record on file, but a very comprehensive set of blank forms have been prepared for each organization of the brigade; in addition to this a complete set of regimental and company books have been provided and distributed. In fact the complete history of the entire brigade during the present administration is now a matter of record, and so carefully and methodically arranged that reference to any communication, to the several staff departments and each organization, can be made at a moment's notice. All requisitions for funds and supplies are carefully scrutinized, all vouchers are examined and a rigid economy is practiced in the disbursement of State moneys requiring the approval of the brigade commander. All this has been largely the result of much time and labor on the part of the present efficient Adjutant General, Colonel A. Ian McLane, who is worthy of much praise for his scrupulous discharge of the manifold duties of his office.

The money accounts of this officer were examined, also vouchers for all expenditures. His accounts were found correct.

FOURTH REGIMENT I., M. N.G.

(Baltimore City.)

COLONEL WILLARD HOWARD, Commanding.

Inspected November 28, 29, and December 1, 1899.

THIRD BATTALION.

MAJOR CHARLES CLARK, Commanding.

Company "C"—CAPTAIN ROBERT S. CHENOWETH.

This company presented a generally neat appearance, steady in ranks, and fairly well "set up." Manual of arms "good" and company movements "fairly good." Company books up to date. Percentage present, 66.

Company "D"—CAPTAIN W. C. WESSELLS.

The general appearance of this company was "fairly good." The company drill can be classed as "fair." The books of the company were in proper shape. The attendance was "very good." Percentage present, 87.

Company "H"—CAPTAIN W. A. BURKE.

This company's appearance was "good." The company drills, "fair." Commands given in proper cadence. Company books in proper condition. Attendance, "excellent." Percentage present, 100.

Company "F"—CAPTAIN T. F. PETERSON.

In general appearance, manual of arms, firings and marching this company can be rated as "fair." Company books in proper shape. Percentage present, 35.6.

REMARKS ON BATTALION.

The battalion drill presented by Major Clark, indicated considerable instruction, and a good knowledge on his part of the proper handling of his command; company commanders should familiarize themselves with the details of the ceremony of "Inspection of a Battalion."

SECOND BATTALION,

MAJOR MORRIS W. TUCKER, Commanding.

Company "B"—CAPTAIN E. F. HAUPT.

This company's appearance was "very good" in dress and bearing of men. The company movements were well executed, and showed the service training of the Captain. The marching was "very good." The company Books were especially neat and up to date. Percentage present, 56.8.

Company "I"—LIEUT. C. R. EVANS, Commanding.

The appearance of this company was "very good." The drill was also "very good." The manual of arms and firings "fair." Company books in good condition. Percentage present, 59.

Company "A"—LIEUT. O. H. BROWN, Commanding.

This company can be rated as "fair" in general appearance, marching, manual of arms and firings. Company books kept up. Attendance very good. Percentage present, 91.6.

Company "E"—LIEUT. E. I. EVANS, Commanding.

This company was presented for inspection without fixed bayonets. The general appearance was "fair," and the company drill was only "fair." Captain N. S. Hill was absent. Company books not up to date. Percentage present, 63.

REMARKS ON THE BATTALION.

The drill of this battalion was quite creditable; there seemed, however, to be a desire to hurry through the movements at the expense of accuracy. (Thorough theoretical instruction of the guides is essential to the precise execution of the general movements of the battalion.) This was lacking on the part of these guides.

FIRST BATTALION.

MAJOR F. P. SWAZEY, Commanding.

Company "G"—CAPTAIN A. W. FEUS.

A "very good" appearance was made by this company. The general "set up" of the men indicated the work of an experienced captain. The company drill was quite good throughout. Company books in good order. Percentage present, 70.

Company "L"—CAPTAIN E. H. I. STESCH, Commanding.

This company made a "fairly good" appearance. Considerable inattention in ranks; company composed mostly of recruits. The company drill was "fairly good." Books up to date. Percentage present, 72.7.

Company "K"—CAPTAIN H. E. HAYNES.

This company is classed as "good" in general appearance, and though composed of new material was very steady and attentive. The company drill was also "fairly good" under the circumstances. Books in order. Percentage present, 39.

Company "M"—CAPTAIN SAMUEL W. FILBERT.

The appearance of this company was "fairly good." There was some inattention in ranks. The drill of the company should be classed as "good." Company books in proper shape. Percentage present, 72.7.

REMARKS ON BATTALION.

Major Swazey handled his battalion well, showing thorough familiarity with details of the movements executed. The ceremony of inspection of battalion was in close accordance with drill regulations.

FIELD MUSIC.

The Field Music made an "excellent" appearance, not only as to dress, but as to neatness and adjustment of equipments, cleanliness of instruments, steadiness in ranks and soldierly "set up" generally. The attendance is especially to be commended in such a large drum corps, the percentage present being 100.

QUARTERMASTER'S DEPARTMENT.

CAPTAIN D. F. PENNINGTON, Regimental Quartermaster.

The money accounts of this, the fiscal officer of the regiment, were examined and found correct up to date. All vouchers are now examined by a Regimental Board, also by the Adjutant General of the Brigade, as to current expenses of the regiment. This officer is bonded according to law. Regimental and government property, both Quartermaster's and Ordnance, is in his charge. All his property is properly stored in the armory and looked after with the same care and system that has always characterized the work performed by this energetic Quartermaster.

REMARKS ON REGIMENT.

This regiment has been working under difficulties in its efforts to reorganize since the Spanish War. Four of its companies constituted a battalion of the First Regiment, Maryland,

United States Volunteers. Their recent return to the Fourth Regiment, together with numerous changes among officers and men in many of the companies, were the main reasons for the presentation of the regiment for inspection under unfavorable conditions. Four of the companies have not yet been supplied with complete equipments of ordnance nor with new clothing throughout. Under these conditions it would not be reasonable to expect the standard usually required at the annual inspection. The United States Government has furnished arms and field equipments in place of those transferred to volunteers during the war, and new clothing has been issued by the State. Regimental headquarters is now supplied with the necessary books of record, and since my last detailed inspection the regiment has been concentrated under one roof in a handsome armory, consequently many obstacles formerly in the way have disappeared, and a good foundation now exists for building up the regiment to a high standard of efficiency.

FIFTH REGIMENT, I., M. N. G.

(*Baltimore City.*)

COLONEL FRANK MARKOE, Commanding.

Inspected December 5th, 7th and 8th, 1899.

	PRESENT.			ABSENT.

THIRD BATTALION.

MAJOR H. M. WARFIELD, Commanding.

Company "I"—CAPTAIN N. L. SPORR

The general appearance of the as
to dress and bearing and the as

"good." Manual of arms and firings "fairly good." Some gazing about in ranks. Company books in good condition. Percentage present, 80.

Company "L"—CAPTAIN JESSE SLINGLUFF.

The neat and steady appearance of this company was quite satisfactory under the circumstances, it being practically a new company, except old non-commissioned officers. The company movements, manual of arms and firings were fairly well done. Company books in proper order. Percentage present, 64.

Company "B"—CAPTAIN THOMAS S. JANNEY.

This company's appearance as to dress was "very good," but there was some inattention in ranks; it presented a very good company drill, the manual and firings can be rated as "good." Books were in order. Attendance good. Percentage present, 89.

Company "G"—CAPTAIN C. B. CLOTWORTHY.

The appearance of this company as to dress was generally good, men were very steady in ranks. Company movements, manual of arms and firings were "fairly good." Some company books require completion to date. Percentage present, 78.

REMARKS ON BATTALION.

The Battalion Commander demonstrated his knowledge of battalion drill in presenting several well executed movements. Nearly all non-commissioned officers in this battalion had field service in volunteers. Eighty-seven old members, balance new men.

SECOND BATTALION.

MAJOR LEWIS M. RAWLINS, Commanding.

Company "E"—CAPTAIN JOHN HINKLEY.

The very good appearance of this company, both as to dress and general steadiness and soldierly bearing, was most satisfactory. Company movements and firings "fairly good." Manual of arms "very good." Some cadence. Company books particularly neat and up to date. Attendance "excellent." Percentage present, 91.

Company "D"—CAPTAIN LAY BRYAN.

The general appearance of this company was "good." The company drill was fairly good, and the firings and manual of arms can be classed likewise. Company books in good shape. Percentage present, 87.

Company "A"—CAPTAIN R. B. BOWIE.

This company's appearance and general bearing in ranks can be rated as good. The manual of arms was more than good.

considerable cadence; the firings fairly good and the company movements were "good." Books in proper order. Percentage present, 72.

Company "K"—CAPTAIN E. A. MUNOZ.

This company presented a good general appearance and quite steady in ranks. The Company drill, firings and manual of arms should all be classed under the same head as "fairly good." Attendance "excellent." Percentage present, 95.3.

REMARKS ON BATTALION.

Major Rawlins' drilling of his battalion showed care and attention to details of movements. Two new captains since last inspection. Most of non-commissioned officers in this battalion are old members.

FIRST BATTALION.

MAJOR GEORGE L. DEICHMAN, Commanding.

Company "C"—CAPTAIN ELBERT THOMPSON.

The dress and steadiness and set up of this company can be classed as "good;" the manual of arms, firings and company drill was "fairly good." Company books up to date. Attendance "excellent." Percentage present, 97.8.

Company "M"—CAPTAIN RIDGELY GAITHER.

The remarkably neat appearance of this company as to uniforms, its steadiness and military bearing and attention to every detail of inspection entitled it to be classed as "excellent." The firings were "good" and the company drill was "very good." The manual of arms was "excellent," the attention to cadence was pronounced. The attendance was "excellent." Company books up to date. Percentage present, 98. This company is honored with having the highest general rating of any company in the National Guard at this inspection.

Company "H"—CAPTAIN E. A. HOLMES.

The general appearance of this company was fairly good. Company drill, manual of arms and firings should also be rated as fairly good. Company books in good shape. Percentage present, 68.

Company "F"—CAPTAIN WASHINGTON BOWIE.

This company presented a good appearance as to dress and steadiness in ranks. The company drill was fairly good, as well as the manual of arms and firings. Company books in good order. Percentage present, 74.4.

REMARKS ON BATTALION.

The handling of this battalion was not up to the standard; closer attention should be given to the details of inspection. All non-commissioned officers old members: Nearly one hundred old members in battalion.

QUARTERMASTER'S DEPARTMENT,

CAPTAIN R. J. MILLER, R. Q. M.

Captain Miller's books and records were found to be kept in the same neat, careful and systematic manner as at last inspection. All his money accounts with vouchers are examined quarterly by a Board of Officers of his Regiment, and his vouchers are also examined at Brigade Headquarters. He is bonded. His money accounts were examined by me and found correct. The Quartermaster's property at the 5th Regiment Armory is in good order and condition.

FIELD MUSIC.

The general appearance of the field music, under Drum Major Czarnowskis, was well up to the standard, instruments and brasses in usual bright condition; the drill was "excellent" as well as attendance. Percentage present, 97.

REMARKS ON REGIMENT.

The general appearance of this Regiment as to neatness of dress, adjustment of field equipments, soldierly set-up of the men and steadiness in ranks, created a most favorable impression. There is marked improvement in attention to dress throughout the battalions.

Closer attention should be given to the manual of arms and fringes; also to the details of the ceremony of inspection, errors being noticeable throughout the Regiment.

Regimental record books are kept up to the former standard. The theoretical course of instruction for non-commissioned officers and practical instruction of men as sentinels should be resumed. The Regiment is now almost completely supplied with new uniforms, and in addition practically new rifles and field equipments; its officers, with few exceptions, and nearly fifty per cent. of its men having had several months' of field service as United States volunteers, it is now in a condition to place itself in a higher rank than ever among the militia Regiments of the country.

TROOP "A." M. N. G.

(Pikesville, Md.)

CAPTAIN JOSEPH W. SHIRLEY, Commanding.

Inspected December 2, 1899.

PRESENT.			ABSENT.			
Officers.	Enlisted Men.	Total.	Officers.	Enlisted Men.	Total.	Aggregate
3	33	36	0	75	35	71
Percentage present, 50.						

The progress made by this troop since its first appearance at Camp Wilmer is commendable. Its appearance at this first annual detailed inspection was very satisfactory as to dress and soldierly "set up." The review and inspection were well rendered, and the drill indicated the work of a properly trained instructor and student of cavalry methods.

The clean condition of the arms, the care bestowed on the equipments and the adjustment of the same throughout the entire troop was noticeable, and showed the knowledge and interest of the individual trooper in his work. The ready use of the sabre on horseback and the mounted exercises by individual troopers—selected at random—were prominent features of the drill. The personnel of this organization is excellent, and the pride taken by its members in acquiring a knowledge of cavalry work is indicative of its future usefulness as an efficient accessory to the militia system of the State. The troop at present has no armory. It drills at night, principally by electric lights, on ground adjoining the Pikesville Arsenal. The company property is carefully stored in a room loaned by the courtesy of the authorities of the Soldiers' Home.

The company books and records of the troop were in good shape. The attendance was not satisfactory.

FIRST SEPARATE COMPANY.

(Baltimore City.)

CAPTAIN WM. R. SPENCER, Commanding,

PRESENT.			ABSENT.			
Officers.	Enlisted Men.	Total.	Officers.	Enlisted Men.	Total.	Aggregate.
2	47	49	13	13	62

The company presented a fairly good appearance, under the circumstances; the clothing has been in service for twelve years, and has been well cared for; new clothing should be issued; the wear and tear on it at Camp Wilmer entitles the company to this consideration. The drill-hall is in better sanitary condition since last inspection; it is too small to admit of good drill with a large company. About sixty (60) full-dress uniforms should be turned in, as they are old and never used. Company books in excellent condition. Percentage present, 79.

FIRST NAVAL BATTALION.

(Baltimore City.)

COMMANDER ISAAC E. EMERSON, Commanding.

Inspected December 13, 1899.

	PRESENT.			ABSENT.			Aggregate.
	Officers.	Enlisted Men.	Total.	Officers	Enlisted Men.	Total.

Total.....	14	150	164	4	42	46	210

Percentage present, 78.

Lieut. Commander Edwin Geer presented the Battalion for inspection in the absence of Commander I. E. Emerson. It was paraded as an Infantry Battalion. The general appearance of the command was very satisfactory. Clothing very neat and in good condition, arms in good condition also. The web belts are in very poor condition, having seen much service and should be replaced by new ones.

The Third Division, commanded by Lieut. Wm. M. Goodrich, presented an excellent appearance; the attendance in this division was also excellent, 96 per cent. present. The division is composed almost entirely of officers and men who served on the "Dixie "

After the infantry inspection part of the command was presented as a battery with two (2) Fletcher guns; these in addition to two (2) Driggs Schoeder, two (2) brass howitzers, and one (1) automatic Colt were inspected and found to be in first-class condition. This Battery would be invaluable in event of street riots.

This command was inspected in its recently occupied drill hall, formerly a power house of the street railway company; its drill floor space is not sufficient to handle the four divisions at present, but with alterations in contemplation it will not only be large enough for all infantry formations, but for battery drill as well.

A drill hall for this organization for its winter work has been needed very much, not only to keep the men up in their drill exercises, but as an incentive to attract a good element of the community to this progressive organization.

The money accounts of Paymaster W. V. Wilson, Jr., were not quite ready for inspection; they will be examined when completed. During the past summer this battalion had a week's practice cruise on the U. S. auxillary cruiser "Prairie,"

commanded by Captain M. R. S. Mackenzie, U. S. Navy. On the return from this cruise I had the honor of accompanying his Excellency, the Governor and Commander-in-Chief, on his official visit. Captain Mackenzie, in his report to the Navy Department, said: "This is one of the best organizations we have taken out for instruction, and any help that the United States government or the State of Maryland may give this battalion will be money well spent."

Since my last inspection a large majority of the officers and men have seen service on either the "Dixie" or U. S. monitors in the war with Spain. Lieut.-Commander Geer reports that over 60 per cent. of these are members of the organization. These officers and men have therefore been subjected to considerable service training in naval matters, and have had some valuable experience as to discipline and customs of the navy, and obtained a good deal of knowledge in gunnery practice. I find them zealous in their work. They have demonstrated their ability to handle the "Sylvia," a practice ship transferred to them by the Navy Department. It would, therefore, seem wise that every encouragement should be extended this organization, and that liberal increase in the State's appropriation be made to still further stimulate its members to increased exertions in the future in their efforts to place it second to none in the country.

I desire, therefore, to renew the recommendations in regard to brigade organizations as fully set forth in my report of last annual inspection.

GENERAL REMARKS.

In closing this report I especially desire to invite attention to the remarks in my last annual detailed inspection in regard to the "Medical Department" and "Target Practice." The organization of the former on a practical working basis is one of the most important matters requiring attention in our State militia system; and as one of the principal duties of a soldier is to learn how to use his rifle properly, an out-door target range is absolutely essential to give him thorough practical knowledge on this subject.

I have been honored in making the first military detailed inspection of the entire National Guard of the State, since its organization.

In reviewing the work of this department I cannot but feel that considerable progress has been made in placing our State troops on a higher plane of efficiency, and that the policy outlined by you of applying regular army methods of inspection, modified to conform to the changed conditions usually prevailing among national guardsmen, has been productive of some good and to be hoped permanent results. Certainly the standard has been raised in many things that pertain to the making

of a good soldier and the excellent administrative system now prevailing throughout the brigade can scarcely be classed with that in vogue at the time of my first inspection.

My observation of the militia of several other States leads me to believe that our own National Guard compares quite favorably with a majority of them. There is still room, however, for great improvement, especially from the practical-useful standpoint for the work they are most liable to be called upon to perform under the militia law of the State, and for which it exists. The experience in the late war shows that National Guardsmen can readily be moulded into practical soldiers by a proper amount of training, and the leaven of volunteers existing in all our State regiments should be of very material assistance in attaining this desired end.

I beg leave to make acknowledgment of the confidence reposed in me, as manifested in the cordial approval of the work of this office, and to tender my heartfelt thanks for your kind assistance and the many courtesies extended me during your administration.

The duty required of an Inspector of making unfavorable criticisms at times is not a pleasant one. It has been the aim of this office to record conditions impartially and in such manner as to produce the best results. The comments have been made with no desire to find fault, but, on the contrary, in the nature of instruction. In such a sense I am sure they have been accepted by all those imbued with the true military spirit, and who, therefore, have at heart the real interests of the National Guard of the State.

Very respectfully,

T. S. MUMFORD,

Inspector General, Maryland National Guard.

Report of Commanding Officer, First Brigade.

HEADQUARTERS, FIRST BRIGADE, M. N. G.,

BALTIMORE, *December 20, 1899.*

ADJUTANT GENERAL, STATE OF MARYLAND,

Annapolis, Maryland.

SIR :

In obedience to G. O. No. 11, A. G. O., c. s., I have the honor to submit my report of the present condition of this brigade and its operations during the years 1898 and 1899.

On April 14th, 1898, a company of infantry organized at Rockville, Montgomery County, was mustered into the service of the State as Company "K," First Regiment, with an enlisted

strength of 53. The officers elected and commissioned according to law were Samuel Riggs of R., Captain, and James A. Henderson and Otho H. W. Talbott as First and Second Lieutenants, respectively.

Company I, First Regiment, having been reported as below the proper standard in enlisted strength, efficiency and discipline, was on April 20th, 1898, disbanded and mustered out of the State service by G. O. No. 9, A. G. O., 1898.

The Militia Law of 1896 provided for the formation, under conditions therein named, of a signal corps to be attached to the brigade. On recommendation of these headquarters Mr. Neil P. Leary, a civil engineer by profession, was commissioned by the Governor as First Lieutenant, and under provisions of G. O. No. 9, A. G. O., 5th April, 1898, undertook the work of organizing such a corps. He was successful in enlisting an excellent force of electricians, telegraphers and linemen.

On 21st April, 1898, the Governor, by virtue of authority given by Section 34 of Militia Law, ordered Major General Wilmer, the Adjutant General of the State, to assume command of all the Maryland troops then organized or thereafter to be organized, and on the same day General Wilmer in General Order assumed command of the Maryland State Forces, particularly setting forth that this order in no manner affected, or would affect, the authority or status of the commanding officers of the First Brigade, First Naval Battalion, Fifth Regiment Veteran Corps, or any organization to be thereafter formed. This plan worked well and tended to promptness in carrying through the subsequent work of raising and equipping the State's quota for volunteer service.

On the 22d of April, 1898, the Major General Commanding the Maryland State Forces ordered the First Brigade to go into camp at Pimlico, Baltimore County, Maryland, on the 25th of April, 1898, for such time as might be prescribed in future orders, and I was directed to issue all necessary orders for the formation of the camp and the mobilization and subsistence of the troops. The order of the Major General Commanding stated that the camp was established for the further instruction and discipline of the brigade, and for completing its organization, armament and equipment preparatory to any service that might be required of it by the National or State Government.

In pursuance of this authority I ordered the First Separate Company to the site selected for the camp on the 24th of April to protect the State property which was to arrive that night, and on the 25th of April, at 2 P. M., left the corner of Eutaw Place and North Avenue, Baltimore, for camp with Fourth and Fifth Regiments of Infantry and Troop A, arriving at 3.15 P. M. The companies of the First Regiment reached camp separately during the afternoon of the 25th from their various stations throughout the State.

The site selected for the camp was the property of the Maryland Agricultural Society, and situated three miles northwest from the centre of Baltimore city. Two lines of electric cars pass the grounds, and Arlington, a station on the Western Maryland Railroad, is one mile distant. The grounds were surrounded by a high board fence, and were sufficient in area to lay out a regulation brigade camp for the three regiments of infantry and to afford a drill ground ample for two regiments drilling simultaneously in close order formation.

Each of the separate organizations had its own camp within the same enclosure. The grounds contained a large covered grand stand, ample stabling for all horses, and suitable buildings for quartermaster and commissary store-houses. The water supply was obtained from an artesian well, and was ample in quantity and most excellent in quality. A tank of twenty thousand gallons capacity, with electric pump, was erected and the water piped through the camp, a tap being put at foot of each company street. Current for the pump was obtained from one of the electric railways.

The camp had been laid off on the 24th by the Chief Quartermaster of the brigade, and the location of each tent marked with a ready-built board flooring. This flooring had been stored at Frederick since the State camp held there in July, 1896.

Tentage was drawn from Chief Quartermaster by each command on its arrival, and by nine o'clock P.M. the entire brigade was settled in camp.

The space under the stand was used for regimental kitchens for the three infantry regiments and for mess hall, the space being only sufficient to feed three battalions at a sitting, one from each regiment. By the fourth day in camp temporary mess sheds had been erected sufficient in size to feed all simultaneously.

The morning report of April 26, 1898, showed the strength of the brigade in camp as follows:

ORGANIZATIONS.	Field Officers.	Staff Officers.	Line Officers.	Enlisted Men.	Totals.		
					Officers.	Men.	Aggregate.
Brigade Headquarters.....	1	7	5	8	5	13
First Regiment.....	4	9	18	340	31	340	371
Fourth Regiment.....	3	11	31	683	45	683	728
Fifth Regiment.....	5	14	33	667	52	667	719
First Separate Company.....	3	55	3	55	58
Troop A.....	1	31	1	31	32
Signal Corps.....	1	8	1	8	9
Total.....	13	41	87	1789	141	1789	1930

The method, which has obtained in this State for years, of each regiment and separate organization having its food cooked in bulk by hired cooks on coal stoves, was followed. The method is unsatisfactory from every point of view, and although the brigade was supplied with a complete outfit of Buzzacott ovens, and it was intended to put them in use as soon as the camp was established, yet the weather conditions were such that in view of the inexperience of officers and men with this form of cooking, their use was postponed until the last few days of camp. As soon as the weather improved the Buzzacott ovens were set up, and the first meal was prepared without previous instruction, and proved at once the superiority of this over the old method.

Rations were issued daily by the Chief Commissary to regimental and separate organization commissaries upon requisition. The amounts and component parts of the ration issued are shown in the table attached to the report of Major F. C. Coale, Chief Commissary of the Brigade, a copy of which report is herewith enclosed. It shows the food cost per enlisted man per day, to have been 25.16-100 cents, and for preparation of food 6.50-100 cents, or a total subsistence cost of 31.66-100 cents per enlisted man per day. The conduct of this department under Major Coale was admirable.

The weather conditions were so unusual as to interfere seriously with the work the camp was designed to accomplish. The record is as follows:

WEATHER CONDITIONS AT CAMP WILMER, 1898.

DATE.		CONDITIONS.

The health of the troops in spite of the weather and consequent enforced idleness was remarkably good. The sick reports showing the average daily number of men in hospital as three. The greatest number on any one day, and that for one day only, was eight. On five days there were no sick in the hospital.

On April 27th the Governor of Maryland issued a proclamation reciting the proclamation of the President of the United States, and announcing Maryland's quota to have been fixed at one regiment of infantry and four batteries of heavy artillery. The Governor's proclamation further called upon the organizations of the Maryland National Guard, as they might be selected to volunteer for such service, so that the quota required from Maryland might be filled as nearly as possible from the organized militia.

On the same day the opportunity to volunteer as the regiment of infantry was offered to the Fifth Regiment, and by its officers promptly accepted.

The opportunity to volunteer as the four batteries of heavy artillery was then offered to the Fourth Regiment, and, after consideration by its officers, was declined. The opportunity so declined was then offered to the First Regiment, and immediately accepted.

The work of supplying Maryland's quota having thus been undertaken by two of the National Guard Regiments, and the camp having been established primarily for the organization and equipment of such troops as might be called for by the National Government, the Fourth Regiment was ordered to return to its armory in Baltimore, and there be dismissed.

The regiment of infantry called for was at first ordered to be officered and organized as follows: Colonel, Lieutenant-Colonel, two Majors, Adjutant (extra Lieutenant), Quartermaster (extra Lieutenant), Surgeon, two Assistant Surgeons, Chaplain, Sergeant-Major, Quartermaster-Sergeant, Chief Musician, two principal Musicians, three Hospital Stewards, and twelve companies each having three officers and eighty-one enlisted men.

On the 30th April a change in the apportionment of troops required from Maryland was made known, two battalions of infantry being called for in place of the four batteries of artillery, and these were ordered organized from the First Regiment, I., M. N. G. At the same time the Honorable Secretary of War authorized a change in the organization of the regiment of infantry first called for, by adding a Major, three Battalion Adjutants and three Battalion Sergeant-Majors, and reducing the number of enlisted men in each company to seventy-seven. The two battalions of infantry were ordered to be organized with a Lieutenant-Colonel, two Majors, two Assistant Surgeons, two Battalion Adjutants, two Sergeant-Majors, two Hospital Stew-

ards and eight companies each officered and organized in the same manner as the companies of the regiment of infantry.

The work of organizing and recruiting the quota of troops thus called for from this State was immediately undertaken. Applicants for enlistment were physically examined by the Regimental Surgeons, and were required to be of good character and habits, and in years under forty-five and over eighteen. Those accepted were at once enlisted into the Maryland National Guard for the regulation term of three years.

The Fifth Regiment, under the new organization, required 935 enlisted men, and had on this date 731. The two battalions required eight companies, with a total enlisted strength of 620, and the First Regiment had at this date only six companies and 381 enlisted men.

Applications from several towns in the State were received by the Governor asking to have the opportunity of furnishing recruits for two additional companies from among their citizens. The applications were referred to me for decision, and Cumberland and Easton were chosen, one in the extreme eastern and the other in the extreme western part of the State. On May 2 Captain Frederick I. Mosher, Fourth Regiment, was ordered to Cumberland to recruit and muster into the Maryland National Guard a company to be known as Company "C," First Regiment, and Captain Chase de Krafft, Assistant Surgeon First Regiment, was detailed to accompany him as examining surgeon. The company was rapidly recruited, an election of officers was held under provisions of the militia law, and on May 5th Captain Mosher reported in camp with three officers-elect and seventy-six enlisted men. Although this work was done rapidly it was nevertheless done well, for not a man from Company "C" was rejected by the United States surgeon when examined preparatory to muster in to the volunteer service.

On May 4 Captain George F. Haupt, Fourth Regiment, was ordered to Easton to recruit and muster into the National Guard Company "F," First Regiment, and Captain John G. Jay, Assistant Surgeon, Fourth Regiment, was detailed to accompany him as examining Surgeon. This company was also rapidly recruited, an election of officers was held under provisions of the militia law, and Captain Haupt reported the company organized on May 8 with three officers and eighty-two enlisted men. The recruiting for the six companies of First Regiment already organized was done at their home stations by officers detailed from their respective companies. The recruiting for the Fifth Regiment was done at Camp Wilmer.

Major Louis Crampton, Surgeon United States Army, began his examination of officers and men for the United States service on May 11, and on May 14 the requisite number had been accepted in the Fifth Regiment, and it was immediately

mustered into the United States service as "Fifth Maryland U. S. V. (Fifth Regiment I., M. N. G.)"

In the First Regiment the necessary number was reached for Companies "A," "B," "C" and "F" on May 16, and these companies were on that day mustered into the volunteer service, and on the following day the remaining companies, "D," "E," "G" and "K" were accepted and similarly mustered, the two battalions being accepted as "First Maryland U. S. V. (First Regiment I., M. N. G.)" These official designations of the regiments, made with the approval of the War Department, taken in connection with the provision of G. O. No. 22, A. G. O., temporarily detaching them from this brigade for the purpose of enabling them to enter the volunteer service of the United States, did away with the apprehension of "loss of identity" which caused so much trouble in other States.

In the Fifth Regiment forty-nine officers presented themselves for examination by the United States Army Surgeon, and all were passed except five, Colonel Frank Markoe, Major William H. Crim, Surgeon, Captain I. R. Trimble, Assistant Surgeon, Captain James D. Iglehart, Assistant Surgeon, and Captain Charles F. Albers, Company H.

In the First Regiment thirty-one officers were examined and all accepted except Captain J. Wright Downey, Assistant Surgeon.

In the Fifth Regiment 986 enlisted men were examined by the United States army surgeon, and 51 were rejected. In the First Regiment 736 were so examined and 116 rejected.

Each officer who was mustered into the volunteer service was supplied by the State with fatigue uniform, campaign hat, overcoat, blanket, blue flannel shirt, canvas leggings, rubber poncho, haversack (containing meat can, knife, fork, spoon and tin cup) and canteen. Field and staff officers also received horse equipments.

Each enlisted man was supplied by the State with trousers, blouse, overcoat with cape, campaign hat, shoes, leggings, blue flannel shirt, blanket, rubber poncho, blanket bag, haversack (containing meat can, knife, fork, spoon and tin cup), canteen, woven cartridge belt and bayonet scabbard with brass hook attachment.

All clothing and equipment was according to United States army standards. The troops were fully armed with Springfield rifles, calibre .45, and each command was supplied with twenty thousand rounds ball cartridges. Each of the twenty companies had a Buzzacott field oven complete.

The Fifth Regiment was supplied with 355 common tents, 43 wall tents and three hospital tents, and the First Regiment with 249 common tents, 32 wall tents and four hospital tents.

On June 8th, 1898, the Governor issued a proclamation based upon the President's second call for volunteers, announcing that there were required from Maryland under this call, first, 580 enlisted men to recruit each of the twenty companies then in the service to the maximum of 106 enlisted men, and, second, a battalion of four companies, each of three officers and 106 enlisted men, to be assigned to the First Regiment, thus making it a full regiment.

The men so required for the Fifth Maryland, U. S. V., were recruited in Baltimore by officers detailed from the regiment for that purpose. The Fourth Regiment was given the opportunity to furnish from its officers and men the battalion called for, and immediately volunteered for that purpose. The officers of the Fourth Regiment were ordered by the Major General commanding to be convened by me for the purpose of selecting the officers for the four companies in such manner as I might prescribe, the names so selected to be submitted to the Governor of Maryland for approval. If approved, they were to recommend, through regular channels, a major, and he, in similar manner, was to name the battalion adjutant.

On June 9th the officers of the regiment were convened, and before any method of selection had been announced I was requested to undertake the duty without suggestion from them. I named George F. Haupt, Frederick I. Mosher, Louis Schmidt and Andrew W. Feuss for the captaincies, and, after conference with them, selected for the First Lieutenants Robert S. Cheno-weth, Charles Hahn, Charles R. Evans, Samuel J. Blight, and for the Second Lieutenants, Ernest W. Fetzer, Orville H. Brown, Charles L. Lyons and Harry E. Haynes.

These officers were approved by the Governor, and they selected Colonel J. B. Phipps, Adjutant General First Brigade, as Major, and he named as his adjutant Lieutenant Frank Ryley, at that time adjutant of the First Battalion, Fourth Regiment.

These officers were on the 20th June, 1898, placed on special duty at the Fourth Regiment Armory to prosecute the work of recruiting and preparing for muster the four companies which were to constitute the Third Battalion, First Maryland, U. S. V. The work was completed and the companies mustered in on the 29th of June, 1898. Each officer and enlisted man was armed and equipped by the State similarly to those volunteering under the first call. As the battalion was ordered to join the First Maryland, United States Volunteers, at Fort Monroe, Virginia, no tentage or ammunition was supplied to it.

As the result of the visit of the Adjutant General to the camps of the Fifth Maryland, United States Volunteers, at Tampa and Huntsville, a hospital train was sent from the latter place in charge of a surgeon and nurses sent from Baltimore. This train arrived here on 28th August, 1898, and brought one officer and

107 enlisted men. Of these the officer and forty-five enlisted men were sent to hospitals, and sixty two men were able to go to their homes. The train was sent back to Huntsville by way of Fort McPherson, Atlanta, and returned here on 3d September, 1898, bringing one officer and seventy-five enlisted men. Of these fifty-eight enlisted men were sent to hospitals, and one officer and seventeen men were able to go to their homes. Of the two officers and 182 men thus brought home, four died.

The furnishing of Maryland's quota under the President's first call for volunteers, and the certainty of a second call, made it probable that the entire infantry strength of the brigade would be withdrawn from the State, leaving us dependent upon Troop "A," which at this time had but thirty-two enlisted men to deal with any internal disorder. The Major General commanding on 24th May, 1898, directed me to take steps to have the Troop recruited up to 100 enlisted men. In the orders originally organizing the Troop it was provided as a prerequisite to enlistment that each man should furnish and maintain a serviceable horse. Therefore, to encourage enlistments and to promote efficiency an allowance of \$1 per man was made for each mounted drill. By August the Troop had been increased to an enlisted strength of seventy six.

On August 5th three officers and thirty-six enlisted men of the Troop went into a three days' voluntary camp of instruction at a tract of land in Baltimore County, known as "Soldiers' Delight." A report of this camp has already been submitted to you. Its cost to the State was \$100.

On 24th October, 1898, the Commanding Officer of the Fifth Regiment reported to me in person the return of his regiment, which had been detached from the brigade on 11th May, 1898, to enable it to volunteer in the United States service.

Leaves of absence and furloughs were granted all officers and enlisted men of the command under provisions of your G. O. No. 39, 1898, until 5th December, 1898. Many of the men who had enlisted in this regiment at Camp Wilmer had done so for the purpose of going into the volunteer service of the United States. To relieve those men from serving for the balance of their terms of enlistment in the National Guard, as well as in order to reduce the companies within the maximum of sixty provided by our militia law, an opportunity was given to all who had enlisted between 22d of April and May 14th, 1898, to apply for discharge. The companies having thus been reduced to proper size, requisitions for ordnance and quartermaster stores were made and filled to fully equip the regiment.

The eight companies of the First Regiment and the four companies of the Fourth Regiment which constituted the First Maryland, United States Volunteers, were mustered out of the United States service on February 28th, 1899, and reported

back to this brigade. Leaves of absence and furloughs for the officers and men of the First Regiment were granted until May 1st, 1899, and for the Fourth Regiment until April 3d, 1899. Similar steps for the reorganization of these two regiments were taken as above described in the case of the Fifth Regiment.

At the present time two battalions of the Fourth Regiment have been fully equipped with clothing and ordnance. The remaining battalion has been supplied with sufficient clothing for its present enlisted strength, but has not as yet received its ordnance, requisitions for which have been forwarded by me.

To equip the troops forming Maryland's quota in the volunteer army took all the quartermaster and ordnance stores owned and held by the State. When these troops returned they brought nothing whatever with them, so the expense of re-equipment of the entire infantry arm of the brigade has been at once put upon the State. This has made it impossible up to the present to undertake the work of properly fitting up the armories of the companies of the First Regiment, a thing that I regard as prerequisite to the issue of any equipment. Immediately after the beginning of the new year I shall recommend that the armories of at least four companies of this regiment be so improved as to provide accommodations for keeping therein of all State and Government property issued to such companies, an impossibility at the present time. When this has been accomplished the work of similarly providing for the other companies of the regiment may be undertaken.

On 22d of July, 1899, three officers and thirty-four men of Troop "A" started on a practice march through Western Maryland and Southern Pennsylvania. A report of this march by the commanding officer of the troop is enclosed herewith. I visited the Troop at two points on their march. The profitable use made by the officers and men of this experience was such as to increase the confidence I already felt in this excellent organization.

The following table gives the organized strength of the brigade as of 25th November, 1899:

ORGANIZATIONS.	Field Officers.	Staff Officers.	Line Officers.	Enlisted Men.	Total.		Aggregate.
					Officers.	Enlisted Men.	
Brigade headquarters.....	1	8		6	9	6	15.
First Regiment.....	3	9	22	419	34	419	453.
Fourth Regiment.....	5	10	25	619	40	619	659
Fifth Regiment.....	5	12	29	691	46	691	737
First Separate Company.....			2	60	2	60	62.
Troop "A".....			3	68	3	68	71
Signal Corps.....			2	11	2	11	13
Totals.....	14	39	83	1874	136	1874	2010.

I desire to acknowledge the satisfactory performance by all the officers of my staff of such duties as they have been called upon to perform. The work of Col. Allan McLane, Adjutant-General of the brigade, has been particularly arduous, but performed with an intelligence and faithfulness calling for special comment.

Very respectfully,

(Signed.)

LAWRASON RIGGS,

Brigadier General.

Report of the Commander, First Naval Battalion, for 1898.

HEADQUARTERS FIRST NAVAL BATTALION, M. N. G., U. S. S.

"DALE."

BALTIMORE, MD., *December 28, 1898.*

SIR:

In obedience to your orders I have the honor of submitting the following report on the operations of the Maryland Naval Militia for the year 1898, giving in detail a synopsis of the services rendered the United States government in the war with Spain.

The advent of this most memorable year found the officers of my command busily engaged in gathering information for the Navy Department under instructions from the Department as to the different classes of vessels hailing from this port and their adaptability for auxiliary vessels of the navy. We were asked to supply the original blue prints of all such vessels where possible, and to make drawings showing proposed changes into gunboats, torpedo boats, etc.; the possible cost of such changes, etc. In this connection I refer with much pleasure to the interest manifested by the officers of this Battalion in securing this information, and the time they devoted to this work, which was largely done before the excitement attending the blowing up of the battleship "Maine," demonstrating the fact that their devotion to this branch of the service is actuated by higher and nobler principles than the wave of temporary patriotism that affects certain classes only at the outbreak of actual hostilities.

The Department not only required a description of these vessels, but a personal inspection of them, and the information thus obtained was bound in duplicate, one copy of which was sent to the Bureau of Naval Intelligence and one copy retained at these headquarters.

The drawings prepared by Lieut. Wm. M. Goodrich received special commendation from officers of the regular navy.

During the latter part of the month of February, when the hostilities with Spain seemed imminent, I received verbal orders from you to recruit the Battalion to the full limit allowed by law—26 officers and 324 men—and to place provisional orders for equipments, uniforms, etc., in order that such articles could be supplied on short notice, when required. In accordance therewith I issued orders to the commanding officers of the four divisions, and the heads of the different departments to make out requisitions for all equipments and uniforms necessary to put the command on a war basis and ready for service.

Early in April I received orders from you stating that the Secretary of the Navy desired eight officers and one hundred and sixty-seven men from the Maryland Naval Militia for duty on the U. S. S. "Dixie." You authorized me to ask for volunteers for this service, and to equip and uniform said force, and to notify the men to hold themselves in readiness to move on an hour's notice. I ordered the battalion to report on board the U. S. S. "Dale." After publishing your orders, I called for volunteers for service in the United States Navy, and it gives me pleasure to state every member of the organization, save one, promptly volunteered to go.

The detail for the U. S. S. "Dixie" was made out and equipped. On Saturday, April 23, at 12 o'clock noon, I received your orders by telephone to send the "Dixie's" com-

plement to her at once, and within five hours the officers and men had been summoned from their respective offices, stores and workshops, reported on board the "Dale," uniformed and were marched aboard the Norfolk steamer, en route for Norfolk Navy Yard. This prompt movement was very favorably commented upon by the Commandant at Norfolk Navy Yard.

The "Dixie's" complement was increased during the following week from this battalion to 12 Commissioned Officers and 266 Petty Officers and men and one Warrant Officer, as per Appendix "B."

Included in the "Dixie's" complement were 65 men for the engine-room force, and 12 men, including cooks, for the messmen's branch. These men are not provided for in our regular organization, but were enlisted by your authority.

The following officers; R. S. Paul, B. F. Jacobs and R. P. Brown, who were officers on the "Dixie" while she was in the merchant marine service, were also given special commissions by the Governor of Maryland in order that they might receive commissions in the United States Navy and assignment to duty on the "Dixie."

Captain Davis was quite anxious to retain these officers on the "Dixie" on account of their familiarity with the ship, and the Department advised me that none but naval militiamen from Maryland would be assigned to this ship, as it was the desire of the Department that the Naval Militia should receive full credit for any meritorious service the "Dixie" might render and be responsible for any of her shortcomings.

Few of the auxiliary cruisers of the navy rendered more efficient or valuable service than the "Dixie," and one of the officers of the regular service, on the "Dixie," wrote me personally as follows: "The success of the 'Dixie's' cruise was due in a great measure to the fine spirit which animated her crew and fitted them to successfully overcome the many obstacles they had to meet."

Among the appendices hereto attached will be found a report and extract from the log of the "Dixie's" prize crews, showing the important and hazardous work intrusted to the Maryland boys.

On April 23d, after dispatching the "Dixie's" complement in obedience to your instructions, the remainder of this command was ordered to report on board the U. S. S. "Dale," quartered and drilled daily until further orders.

During the two or three weeks following, we waited patiently on board the "Dale" for orders from the Navy Department authorizing our enlistment in the U. S. Naval Service. Regular ship routine was observed, and the entire ship's company was drilled morning and afternoon on shore and afloat, and the officers were formed into a school of instruction and later examined by an officer of the Navy.

Early in May I obtained your permission to visit the Navy Department in behalf of the remaining members of my command, who were getting quite impatient to enlist and go to the front. After two or three visits to Washington, I received from the Assistant Secretary of the Navy, Mr. Theodore Roosevelt, assurance that the remainder of my command would be mustered into the service and assigned to coast defense duty, and between the 22d and 25th of May commissions were issued to thirteen officers,—four lieutenants, four lieutenants, (junior grade), four ensigns and an assistant surgeon. The Department informed me that no volunteers would be taken into the U. S. Navy with rank higher than lieutenant. 163 men were sworn in, and the Secretary of the Navy authorized the enlistment of the men who were on board May 2d to date from that day, while the officers' commissions were issued May 25th, their pay from the government did not begin until May 31st, the date of the delivery of the commissions. At this time the U. S. S. "Dale" was turned over to the Navy Department, and I received orders from the Secretary of the Navy to command her, and to report to Commander C. T. Hutchins, U. S. N., in command of Fifth District, Coast Defense System.

On June 10th I received orders from Commander Hutchins to send four officers and twenty-four men to Norfolk Navy Yard for duty on board U. S. S. "Apache;" the officers and men reported there on the 11th of June, and Lieut. Edwin Geer was put in command. It was the intention of the department to mobilize a fleet of four gunboats, two torpedo-boats and two patrol-boats for the Fifth District Coast Defense System, which embraced the territory between Metomkin inlet to New River inlet, North Carolina, including the Chesapeake Bay, but before this scheme was carried out peace hove in sight, with only the following vessels assigned to this district:

U. S. S. "Dale," for Reserve Ship; U. S. S. "Apache," U. S. S. "Ajax," U. S. S. "Sylph."

During the month of June Congress enacted the law authorizing the formation of an auxiliary naval force, to which the coast defense system was transferred. Capt. Jno. R. Bartlett was made chief of this force. Captain Bartlett's most extraordinary executive ability and kind consideration for naval militia soon brought order and organization out of the chaotic state in which he found the coast defense system, and he endeared himself to every naval militiaman with whom he came in contact by his courtesy and consideration.

On the 12th of July I received orders from the Secretary of the Navy designating me as assistant to the Chief of the United States Auxiliary Naval Force, and assigning me to the command to the Fifth District of said force, with headquarters at Baltimore, on U. S. R. S. "Dale," which position I had the honor of

filling until I received an honorable discharge from the naval service November 2d, 1898.

On September 14th, 1898, the Navy Department again loaned the U. S. S. "Dale" to the State of Maryland for use of the Naval Militia, and on December 19th, 1898, the Department also loaned the U. S. S. "Sylvia" to the State for use of the Naval Militia, a full report of which I made to you December 20th, 1898.

The assignment of the converted yachts to the Naval Militia is the best evidence of the Department's appreciation of the services rendered by this force, and will greatly improve the efficiency of our organizations and attract a most desirable class of men to this branch of the service.

Inasmuch as our organization does not provide for an engine-room force, the late war has demonstrated the necessity of this class of men, and since we now have a steamer, and will have use for them, even on a peace footing, I would respectfully suggest that you authorize the enlistment for each of the four divisions of this Battalion the following: One Machinist, two Machinists (first class), two Firemen (first class).

The appendices hereto attached give the different ships to which the officers and men of this command were assigned, and it gives me much pleasure to say that both officers and men accepted these various assignments and sub-divisions without any complaint whatsoever, and I have received personally, from most of the commanding officers of the various ships on which the officers and men served, the most flattering reports of their efficiency.

In conclusion, permit me to express to you, sir, my sincere appreciation of the consideration that I received at your hands, and the prompt and military manner with which the affairs of my command that came through your office were handled by you during those busy days of preparation.

I am sir, with much respect,

Your obedient servant,

(Signed.)

ISAAC E. EMERSON,

Commander, commanding.

To the Adjutant General, Annapolis, Md.

Report of the Commander, First Naval Battalion, for 1899.

HEADQUARTERS, FIRST NAVAL BATTALION, M. N. G.,

U. S. S. "DALE,"

BALTIMORE, *December 10, 1899.*

SIR:

Pursuant to your orders I have the honor of appending hereto a detailed report of the operations and condition of this battalion for the year 1899.

Since making my last annual report the Navy Department has loaned to the State of Maryland for use of the Naval Militia the U. S. S. "Sylvia," and in compliance with your orders I proceeded to Norfolk Navy Yard, December 16, 1898, with a detachment of 4 officers and 30 men, and brought the "Sylvia" to this port, arriving December 19.

The "Sylvia" is one of the converted steam yachts that was in service during the Spanish War, and I have found her a most valuable adjunct to this command, stimulating renewed interest and enthusiasm with both officers and men.

Owing to her size, 150 feet over all, she will only accommodate one division at a time, but by sending her out on every Saturday and holiday, each division made several cruises during the summer.

From the report of my executive officer, appended hereto, and from my previous special reports, you will note that we will soon be compelled to abandon the old "Dale," and it becomes imperative that we either secure another ship of her size, or an armory for the protection of Government and State property (the "Sylvia" being entirely too small for the purpose), and for the necessary room for artillery and infantry drills. These important drills, as you well know, cannot be executed with any satisfaction on board a small ship. I therefore strongly urge your recommendation for the next General Assembly to purchase an armory for this branch of the Guard, (the Navy Department having officially notified me that it is impossible for the government to assign us another ship.)

For the ensuing winter I have made favorable terms with the Baltimore United Electric Railway Company for the use of part of one of their old power-houses, located on Baltimore street and Rogers avenue, and we are now drilling there. I have secured an option on this property, and an appropriation of \$100,000 will purchase it and make the necessary changes for converting it into an up-to-date armory, most favorably located and adapted for our purposes. I am, sir, with much respect,

Your obedient servant,

(Signed.)

ISAAC E. EMERSON,

Commander, Commanding.

MAJOR-GENERAL L. A. WILMER,

Adjutant-General, Annapolis, Md.

HEADQUARTERS FIRST NAVAL BATTALION, M. N. G.,

U. S. S. "DALE."

BALTIMORE, MD., *December 8, 1899.*

SIR: I have to report that during the past year this battalion has performed the several duties hereinafter stated. The "Dale" and "Sylvia" have been placed out of commission since September 30. The small boats are all housed. The "Sylvia" was

docked at Columbia Iron Works and new wheel put on in place of the one on her when turned over by the Government. Since placing ships out of commission the "Sylvia's" hull has been chipped and painted with red lead, and is now in first-class condition. The condition of the "Dale" has been the subject of several prior reports. She is unseaworthy, leaks very badly, and in the summer was making 24 inches in 24 hours. Since the fall she has been placed at bulkhead of wharf and now makes very little water.

On December 5 all rifles, cutlasses and artillery pieces were removed from the U. S. S. "Dale" to the armory, Baltimore street and Rogers avenue, where drills have since been held, and will be until next summer, when the battalion returns to boatwork. The men are enthusiastic and attendance is fair.

May 17, battalion paraded and was reviewed by His Excellency Governor Lowndes at Electric Park, at the Trades Display.

June 16, embarked on U. S. S. "Prairie" for annual cruise; 13 Officers, 3 Warrant, 7 Chief Petty Officers, 203 Petty Officers and men—total, 226.

(Report of Cruise, see report Assistant Secretary of Navy). Returned June 23.

Beginning July 1, the "Sylvia" made trips every Saturday to points in the bay, returning Monday morning in time for men to return to work. One division would go each week; the average attendance on these trips were five officers and forty-five men and petty officers. The men were taught seamanship, handling vessels under steam and all duties pertaining to a seaman's life; target practice under way and standing still. One trip was made to Cape Henry and fifty miles at sea.

September 12—Battalion paraded in honor of Capt. N. M. Dyer, U. S. N., who was entertained by the city; was especially commended by Governor Lowndes and Captain Dyer for seamanlike appearance and marching.

December 7—Lieutenant-Commander Geer and Lieutenant Hewes were ordered to meet U. S. S. "Prairie" down the river and pilot her to wharf to load exhibits for Paris Exposition. This order was the result of request from Commander M. R. S. Mackenzie to have an officer meet "Prairie" and pilot her up. Collector W. S. Stone kindly tendered custom-house boat "Guthrie" to put these officers aboard "Prairie." The "Prairie" was met in Fort McHenry channel, off Wagner's Point, and docked pier No. 9, Locust Point.

Respectfully, your obedient servant,

(Signed.)

EDWIN GEER,

Lt. Comd. & Ex. Officer.

TO COMMANDER ISAAC E. EMERSON,

Commanding First Naval Battalion, M. N. G.

**Report of the Commanding Officer, "Veteran Corps," Fifth
Regiment. Infantry, Maryland National Guard.**

**HEADQUARTERS "VETERAN CORPS," FIFTH REGIMENT INFAN-
TRY, MARYLAND NATIONAL GUARD.**

BALTIMORE, *December 5, 1899.*

TO THE ADJUTANT GENERAL, STATE OF MARYLAND;

SIR:

In obedience to G. O. No. 11, A. G. O., c. s., dated November 16, 1899, I have the honor to submit the following report of the operations of this command for the years 1898 and 1899.

This corps has performed no duties during those periods except that of escort, parading as such upon the departure and return of the 5th Md. Reg't., U. S. V. in 1898. Also taking part in the funeral obsequies of Lieutenant-Colonel Wm D. Robinson and all enlisted men of the 5th Md., U. S. V., buried with military honors, who died in the service of the U. S. Acted as escort at the funeral of the late Commandant of this corps, Colonel George R. Gaither; and paraded on September 12, 1899, as escort for Capt. N. M. Dyer. Also took part in the celebration incident to Maryland Day at the Philadelphia Exposition, October 19, 1899.

During the past year an additional company has been added to the roster of this command and especially assigned to duty with the Gatling gun belonging to the corps, and is now thoroughly instructed in its use.

A full complement of modern rifles has been purchased, and I have the honor to report that this command is now fully armed and equipped with up-to-date arms.

The corps now numbers 137 men and eleven officers.

I am, very respectfully,

(Signed.)

CHAS. D. GAITHER,

Colonel "Veteran Corps," Fifth Regiment Infantry, M. N. G.

LAND OFFICE OF MARYLAND,

ANNAPOLIS, November 1st, 1899.

To his Excellency, LLOYD LOWNDES,
Governor of Maryland:

SIR:—I respectfully submit the following report of the business transacted in the Land Office of Maryland for the two years ending September 30, 1899, with some suggestions which I hope the Legislature will carefully consider, as they all tend to the preservation of the valuable records therein stored, and the more efficient conduct of the Office by the Commissioner and his assistants.

THE OBJECT AND VALUE OF THE LAND OFFICE.

The object and value of the Land Office is not generally understood by our people. In it are preserved the most important records, documents, chancery proceedings, maps and other valuable papers collected by the Province and State, since the office was created in 1680. The Land Office, therefore, must be considered as the fountain and depository of the primitive muniments of title to all the landed property in the State—in which respect, the surveys returned to, and the patents recorded in it, together with the chancery records, constitute Maryland's Domesday book, in which a more

accurate description of all the lands of the State is to be found than of the lands in the records of any country whatever. By the Acts of 1780 and 1781, all the lands belonging to British subjects were confiscated to the use of the State, and with these lands Maryland rewarded the officers and soldiers who faithfully served in the revolution in the Maryland Line. The Act of 1781 created a Land Office for the Western Shore, and another for the Eastern Shore, and placed each of them under the direction and care of a Register. In 1841 these two offices were consolidated, and the present Land Office was established at Annapolis. By the Constitution of 1851, the "Commissioner of the Land Office" was created and directed to perform the duties formerly discharged by the Chancellor, Register and Examiner-General, and to act as Judge in caveat cases. In 1853 the General Assembly passed an Act declaring the Court of the Commissioner of the Land Office to be a Court of Record. The Act of 1862 and the Constitution of 1864, made the Commissioner of the Land Office the keeper of the Chancery Records and the ante-revolutionary and revolutionary papers. By the Constitution of 1867 he was further required "to collect, arrange, classify and keep all papers, records and relics connected with the early history of Maryland."

Besides performing the duties required by the Acts mentioned, the Commissioner of the Land Office, among other things, has to issue warrants; to make searches; to furnish copies; to prescribe rules and regulate the conduct of Surveyors in making surveys and returning certificates and plats; to examine and pass upon certificates returned to his office by Surveyors and to hear, examine and decide upon all caveats which come before him as Commissioner.

Warrants have been issued as follows:

Common warrants..... ,.....	28
Special warrants.....	38
Special warrants of resurvey ...	12
Special warrants of escheat.....	6
Special warrants of Proclamation	3
Total	<hr/> 87

Of these warrants, 60 have been executed.

Certificates of survey returned, 60.

PATENTS ISSUED.

Fifty-three patents have been issued, granting five thousand four hundred and five acres and fourteen perches of land, of which one thousand nine hundred and forty-three acres, three rods and twenty-seven perches were vacant land. A complete list of said patents is subjoined:

LAND PATENTS.

Land Patents Issued from October 1st, 1897, to September 30th, 1899.

EXTRACTS OF DEEDS AND INDEXING.

By the Act of 1874, all books containing deeds and transfers of soldiers' lots, and all other land record books, then in the office of the Clerk of the Court of Appeals, were transferred to the Land Office, and it was made the duty of the Commissioner to receive and have the custody of all the books and extracts aforesaid, and of all other extracts of deeds which might hereafter be transferred to his office, and to give certified copies of such deeds and extracts, and to make searches for the same when required. By the same Act the Circuit Court Clerks of the respective counties, and the Clerk of the Superior Court of Baltimore City, were required to make extracts of deeds in a certain form therein prescribed, and to "transfer the same on or before the first day of June, in each year, to the Commissioner of the Land Office," whose duty it was made, by the next succeeding section of the Act, to "receive and carefully file among the records of his office all extracts of deeds transferred to him by virtue of this Act, and all such as shall hereafter be transmitted to him by the Clerks of the Circuit Courts of this State, and when he shall have received a sufficient number of such reports from the same county to form a record book of the proper size, he shall cause the same to be well and substantially bound in leather and placed among the records of his office." By the Revised Code (section 6, page 522), the Judges are required to examine the Land Records of their respective counties, and to see that the Clerks perform these duties. By the Act of 1876 it was made the duty of the Commissioner of the Land Office to have indexed the extracts of deeds deposited in his office, and to continue the indexes as the extracts came into his possession.

It was the purpose of the Legislature in requiring these extracts to be made and preserved to guard and protect the muniments of land-title from destruction by carelessness or fire, and the fact that the Record Offices of St. Mary's, Cecil, Dorchester, Harford, Calvert and Baltimore counties were destroyed by fire, with all their records, attests the wisdom of

having such copies to supply loss and prevent the trouble and confusion which would arise from the loss of record evidence of the title to land. In the course of over two hundred years the extracts of deeds have grown to an enormous bulk, and were until the passage of the Act of 1876 without indexes later than 1815. For the continuance of the indexes to date the Act of 1876 was passed. Without such indexes the extracts are practically valueless, for without them it would be almost impossible in the vast number deposited in the Land Office to find in a short time any particular record of title. The payments made to the Court Clerks for recording deeds in the county or city where they are placed on record includes the cost of making the extracts, and the second record of title to each tract of land preserved in the Land Office is made without additional cost to the owners of the property.

The indexes of the extracts of land title, which the Commissioner of the Land Office is required to have made under the Act of 1876, are full and complete. The name of the grantor and grantee and the name of the land, if any, are indexed in separate volumes. The clerks employed in making the indexes are not paid regular salaries, but receive pay for the amount of labor actually performed.

THE RECORDS OF THE OFFICE.

The records in the Land Office now embraces the following:

Land Office Records, proper.....	331 vols.
Provincial and General Court Records	142 "
Chancery Records and Dockets.....	220 "

EXTRACTS OF DEEDS:

Miscellaneous, Series M. S., 1 to 12, 1788 to 1823, and indexes.....	14 vols.
Miscellaneous, Series A. G., 1 to 19, 1792 to 1815, and indexes	21 "

Washington County, 38 volumes and 7 indexes....	45	"
Wicomico County, 5 volumes and 2 indexes	7	"
Worcester County, 13 volumes and 3 indexes.....	16	"
Charles County Court and other records.....	71	"
Total,		2,088

In addition to the foregoing are 45,000 certificates of survey and 12,415 bundles of chancery papers, and a very large number of maps and miscellaneous papers. More than eleven thousand certificates have been jacketed, numbered and indexed, and about 1,000 chancery cases have been likewise treated.

Appendix No. 1 contains a list of the Land Office books with their respective contents, etc.

EXTRACTS OF DEEDS.

Extracts of deeds from Baltimore City and the several counties of the State have been transmitted to this office in compliance with Sections 54 and 55 of Article 17 of the Code of Public General Laws as follows:

Allegany county—complete to September, 1899.

Anne Arundel county—complete to April, 1899.

Baltimore city—complete to April, 1899.

Baltimore county—complete to October, 1898.

Calvert county—no extracts in this office from 1817 to 1882, excepting from December 5th, 1863, to June 1st, 1867, and from December, 1873, to June, 1875. Extracts complete from June, 1882, to May, 1899.

Caroline county—complete to May, 1899.

Carroll county—complete to January, 1897.

Cecil county—complete to July, 1899.

Charles county—complete to June, 1899.

Dorchester county—complete to January, 1898.

Frederick county—complete to February, 1899.

Garrett county—complete to June, 1899.

Harford county—complete to December, 1898.

Howard county—complete to May, 1899.

Kent county—complete to June, 1899.

Montgomery county—complete to January, 1899.

Prince George's county, complete to 1890.

Queen Anne's county—complete to June, 1899.

St. Mary's county—complete to June, 1899.

Somerset county—complete to May, 1899.

Talbot county—complete to June, 1899.

Washington county—complete to June, 1899.

Wicomico county—complete to February, 1895.

Worcester county—complete to January, 1899.

THE MILITARY LANDS.

The office has a large and valuable map of the military lots comprised in Allegany and Garrett counties, which were awarded to the officers and soldiers of the Mary-

land Line for their services during the Revolution. There are on this map four thousand one hundred and sixty-five lots of fifty acres each, besides sundry tracts which had been patented, and which were laid off by Francis Deakins, appointed under a resolution passed by the General Assembly in 1787 to survey and return a general plot of the State westward of Fort Cumberland. The extreme western section of Garrett county, known as the Glade District, is composed mostly of military lots. The town of Oakland, fifty-six miles west of Cumberland, is located on a fifty-acre lot. That portion of Allegany and Garrett counties which was laid off in lots and assigned to the officers and soldiers of the Revolution has been developed by the construction of the Baltimore and Ohio Railroad, and the West Virginia, Central and Pittsburg Railroad, and the location of the Deer Park and Oakland hotels, and the discovery and development of valuable coal mines and timber lands. As the land has increased in value the demand for it has become greater; titles are subjected to legal ordeal, and the representatives of the officers and soldiers of the Revolution are beginning to look after titles to land which they formerly thought valueless and of little importance. Escheat patents have been obtained on many of the lots which have been, and will continue to be, a fruitful source of litigation as the lots increase in value. Most of the litigation that has occurred before the Commissioner of the Land Office for many years past has been from Allegany and Garrett counties, and especially from that section in which the military lots are situated. The Land Office, important to every part of the State because it contains the patents and the original tenures by which all land is held in Maryland, becomes in Allegany and Garrett counties, where the titles to land are yet unsettled and disturbed, almost a vital necessity.

The "Military Lots to the westward of Fort Cumberland" continue to be a source of some trouble to the Land Office, as well as of litigation in the courts, and it is difficult at times to decide what course to pursue when application is made for warrants to affect them. It is probably safe to say that every

one of the 4,165 lots awarded in 1788 has since that time been granted by the State chiefly in pursuance of escheat warrants. A large number have been so granted by more than one patent, conflicting claims have been created by the State's own action, and applications are still made for escheat warrants to affect them for want of the heirs of the party—settler or soldier—to whom they were originally awarded. The practice of the Land Office has from the beginning been to issue a warrant when applied for, as a matter of course. In the case of *Armstrong vs. Bittinger et al.*, (47 Md. Rep. 103), the Court of Appeals decided that the Commissioner of the Land Office should refuse to issue a patent when the records of the office show a prior grant of the land. Upon the strength of this case the practice in regard to the issue of warrants has been slightly modified. When application is filed an examination of the record of the Military Lots is made, and if it appears that a patent has been issued for it the warrant is refused. It would be manifestly unjust to allow a party to incur the expense of office fees and a survey when the Commissioner knew that there was an insuperable bar to his granting a patent for the land. These lands present a problem. Large tracts of them have been abandoned for years, but the "vested rights" of the grantees of the State and their heirs remain, preventing a grant to desiring purchasers, and yet liable to be acquired by possessory title by some undeserving squatter.

By a comparison of the foregoing statistics with those reported in past years, it will be observed, that so far from decreasing with the lapse of years, as might naturally have been expected, the work of this office has been very materially increased.

The rearrangement of the certificates of survey and chancery papers, and the indexing thereof, begun by my predecessor, has been continued; a number of caveat cases have been heard and determined, and the various decisions have been apparently acquiesced in, as no appeals have been taken; and a voluminous amount of correspondence, which steadily increases, has very largely taxed the time and attention of the Commissioner and his assistant.

BOUNDARIES AND MUSEUM.

My predecessor, in his reports, repeatedly called the attention of the Legislature to the inadequate space of this office to accommodate the museum, and recommended its donation to the Maryland Academy of Sciences in Baltimore. Since his last report, in pursuance of this recommendation, the General Assembly has authorized said donation, and the entire collection has accordingly been transferred to the keeping of said corporation. In appendix No. 3 will be found a list of all documents, maps, etc., on file in the Land Office relating to the boundaries of the State.

STATE RECORDS IN POSSESSION OF THE MARYLAND
HISTORICAL SOCIETY.

In appendix No. 2 will be found a list of all the records belonging to the Land Office now in the possession of the Maryland Historical Society, under the provisions of the Act of 1882, chapter 138.

ANCIENT SEALS.

All of the ancient seals of the Province and State, with one exception, are preserved intact. Many years ago the seal used by the Register of the Eastern Shore Land Office, when there existed a division between the Eastern and Western Shores, was, in some manner unknown, abstracted. The present Commissioner has set on foot in Talbot county and elsewhere numerous inquiries looking to the recovery of this missing seal, but so far without result. This unpleasant incident has suggested to the Commissioner the propriety of the adoption of a more secure method of preserving these seals, and he respectfully asks for authority to purchase, or have constructed, an appropriate cabinet in which all the seals can be securely preserved together, so that they cannot be stolen, or if so, they must all go together, thus largely increasing the chances of detection and the ultimate recovery of this peculiarly interesting property of the State.

THE CHANCERY RECORDS.

An index of the Chancery Records is much needed. It is easy to find a case if the name of the complainant is known, but this is not always within the inquirer's knowledge, and in several instances it has been impossible to furnish the desired information. The Court of Chancery was abolished more than forty years ago, and there is no one now living who, in cases of uncertainty, can give a clue to the records. There are many calls for information contained in these records, and an index of the names of decedents, mortgagors, tenants in common and others, whose lands were affected by the proceedings of the Court of Chancery, would be of very great value. It would not be a very voluminous work, but it would take time and care to prepare it.

A painstaking study of the condition of the office, so far as it affects the daily work and the convenience of those who have business with it and careful consideration of the subject, have convinced the Commissioner of the necessity of the improved office fixtures and of the several indexes mentioned. If objection be made to the cost, the answer is that a public office, if necessary at all, should be conducted for the substantial benefit of the people, and that is not possible in these modern days with antiquated appliances and slipshod methods. And in the long run it will be found to be wise economy to supply the best facilities for the conduct of the public business. It is, furthermore, absolutely necessary for the preservation of these important public records. Less hesitancy is felt in suggesting these expenditures, because for more than twenty years not a dollar has been appropriated to improve the condition of the Land Office, and the contemplated improvements would make the Land Office, in every respect, a useful and efficient department of the State government.

CERTIFICATES UPON WHICH COMPOSITION IS DUE.

There is another class of cases in which great injustice is done to the State. Parties obtain warrants and have certifi-

cates of Survey returned to the Land Office under which they enter into possession of the land but make no further effort to perfect their titles by obtaining patents. This holding ripens into a possessory title, the State is defrauded of the purchase money, and, as the lands do not get upon the assessment books, the parties enjoy them without the payment of taxes.

Since my last report I have been fortunate in collecting for the State more than \$900 due for composition and fees on old certificates; and other bills are now in the hands of competent attorneys for collection.

SUGGESTIONS.

The Legislature having in view the best interests of all the people of the State, is urgently requested to notice and heed the foregoing remarks on the necessity of passing such bills as will conduce to the efficient working of the Land Office, and the preservation of the papers valuable to every citizen of the State.

The Chancery records should be indexed as proposed by my predecessor; in fact, I know of no change recommended by him which does not meet my approval. An assistant to the Chief Clerk is of vital importance, and if the office—now a necessity—is to be kept in existence the State must aid it by liberal appropriations, and make it the equal of any in the country. The fees for search and copy should be as large as other States, while at present they are not one-half. During the session of the last Legislature I drafted four bills all of which were considered necessary, not only by me, but by those preceding me, and yet no action was taken upon any of them.

The Commissioners, having called the Legislature to the requirements needed for the Land Office, and receiving no aid whatever, leave the blame where it rightfully belongs, to the representatives of the people.

CLERICAL FORCE.

The clerical force in my office consisting of Messrs. George H. Shafer, chief clerk; Arthur F. Smith and Charles M. M.

Wingate, the index clerks, have rendered me faithful and intelligent assistance in the discharge of my duties as Commissioner, and to whom I make official acknowledgment of my indebtedness. The services of Mr. George H. Shafer, chief clerk, have been invaluable to the State owing to his long incumbency and familiarity with the records; and I would suggest that the Commissioner be allowed to appoint some competent person to assist him with his duties, now grown onerous on account of the voluminous correspondence—and numerous copies of papers always in demand—who could at the same time be employed in continuing the indexing, numbering and jacketing of the twelve or fifteen thousand bundles of chancery papers and about fifty thousand certificates of survey, which work I earnestly recommend as it will afford an easy and rapid reference to them, and protect them from the ravages of time and rough handling. The assistant could at the same time familiarize himself with the work of the chief clerk and be competent to take his place in case of protracted sickness or death.

Respectfully submitted,

WM. O. MITCHELL,
Commissioner of the Land Office.

STATE OF MARYLAND.

BUREAU OF INDUSTRIAL STATISTICS,
408 MERCHANTS' NATIONAL BANK BUILDING.

BALTIMORE, March 1, 1900.

To His Excellency,

Jno. Walter Smith, Governor of Maryland:

Sir—I have the honor to submit for your consideration the Eighth Annual Report of the Bureau of Industrial Statistics of Maryland.

Very respectfully yours,

JEFFERSON D. WADE,
Chief of Bureau.

PREFATORY.

In this report is completed the list of incorporations in the State of Maryland. Those for the City of Baltimore are given. All the corporations in the twenty-three counties of the State are to be found in the report of this Bureau for 1898. They numbered 887 in that year, with a capital stock of \$134,163,735. It will be seen that the aggregate capital stock in the counties is greatly exceeded by that of the 3,616 incorporations in Baltimore City, which is \$795,189,200. The list of county incorporations presented the full title, the location, the date of incorporation and the capital stock of each one appearing upon the records. The city list covering the years from 1870 to 1899 inclusive embraces the title, the date of incorporation and the capital stock.

When the report for 1898 was issued this feature of the work of the Bureau met with commendation, demand, and the original intention of following up the county incorporations with those of the city has now been carried out. The Bureau has thus presented an accurate, and it is believed, what will prove to be an instructive and valuable compilation of Maryland incorporations.

While it is true that some of these charters have never been availed of, the great worth of others, in a financial and industrial sense, to the City and State, is not represented by the actual amount of capital stock. The incorporations are arranged alphabetically and the summary shows the number and the combined capital stock under each head. "Building Associations" furnish the greatest number of incorporations, 734, with a capital stock of \$202,533,000. In addition to these are 126 "Building and Loan Associations," with \$97,412,500 capital stock; 118 "Building and Savings Associations," \$35,033,000 capital stock; 3 "Building Loan and Investment Companies" \$20,100,000; 91 "Loan and Savings Associations," \$55,360,000; 24 "Loan Savings and Building Associations," \$12,405,000. Many interesting facts are presented in the summary.

With the entrance upon their duties in May of the new State officials appointed by the present administration, Thomas A. Smith, of Caroline County, will become the Chief of

this Bureau, which, since its inception, has had the following heads:

Thomas Curme Weeks, of Baltimore City, 1884-1892.

Allen Bowie Howard, of Baltimore City, 1892-1896.

Charles H. Myers, of Baltimore City, 1896-1898.

Jefferson D. Wade, of Baltimore City, 1898-1900.

Thomas A. Smith, of Caroline County, 1900-

The Bureau was established at the demand of organized labor in the city of Baltimore, and under Mr. Weeks, a representative of the labor organizations, was known as the Bureau of Industrial Statistics and Information. The General Assembly of 1892 changed the name to the Bureau of Industrial Statistics and enlarged its scope. Until 1892, reports were issued bi-ennially, but the Act of that year authorized annual reports.

The past year was prolific of strikes in Baltimore City, and these are considered in the first section of the report. I am glad to say that they resulted in no long-continued trouble between employers and employes and that labor conditions in the City show marked improvement.

The local agent at Baltimore of the Atlantic Coast Seamen's Union, has furnished the Bureau with a review of his work since the establishment of a branch office of the Union at this port, covering only the past year. The great value of the merchant marine to Baltimore and, necessarily to the whole State, would seem to urge upon the General Assembly consideration of the interests of seamen. The article forcibly points out the importance of this subject.

Some points of interest as to the "Sweat-Shops" system in Baltimore, and various notes relating to labor are also included in the report.

JEFFERSON D. WADE.

STRIKES IN 1899.

During the year 1899 numerous strikes occurred in Baltimore city. It is estimated that in all upwards of two thousand workmen were thrown out of employment for periods ranging from one day to several months, and the loss in wages was heavy. The chief strike was that in the city shipyards, affecting, altogether, about eight hundred men. This strike was for a nine-hour day, and was finally won by the strikers. The outcome of this strike afforded great encouragement to the workmen. All the city shipyards granted the demand, but owing to the peculiar circumstances obtaining at the plant of the Maryland Steel Company, the strike there was not a success. A strike at the shops of the Detrick & Harvey Machine Company was lost, the demand made in this instance being for a nine-hour day, also. The Baltimore ship-caulkers asked for an increase in wages, but no strike was ordered. Enamelers at the factory of Matthai, Ingram & Company went on a strike for increased pay, but failed to secure it. A pay grievance also led to a strike at the McShane foundry, and in this case the strikers, who were unorganized, also failed. Eight hundred brew workers, drivers, bottlers, etc., and other employes of the Baltimore Brewing Company went on strike August 3rd, for a nine-hour day, and a lengthy struggle was threatened. However, the strikers and managers of the consolidated breweries amicably settled their differences, a satisfactory agreement being reached the same day of the strike, and all the men returned to work on the following day. There were smaller strikes, some of which lasted a considerable time, and grievances are still in abeyance. Upon the whole, however, the relations between employers and employees in Baltimore, are now generally pleasant and harmonious, although, as is inevitable, there are disputes, open or incipient, which are a source of irritation. These, fortunately, are almost entirely local and affect but a small proportion of the workingmen of the city.

STRIKE IN THE SHIPYARDS.

Boiler-makers and iron-platers, to the estimated number of 600,

demanding a nine-hour day, did not go to work on June 1st, in the Baltimore shipyards. All the shipyards in the city were, practically, tied up in consequence. At the yards of the Columbian Iron Works and Dry Dock Company, four hundred men were out; also one hundred employed by the R. M. Spedden Company, eighty employed by Charles Reeder & Sons, eighty employed by E. J. Codd & Company, and a lesser number employed by the James Clark Company.

The men had the matter of striking under consideration for a long time, and the strike had been decided upon four weeks before. They notified the shipbuilders on May 1st that unless the number of working hours was reduced from ten to nine, a strike would take effect June 1st. A committee, which was sent to interview the shipbuilders in the middle of May, and to renew the demand, claimed to have received no satisfaction.

In one or two cases the employers manifested a willingness to concede the demands of the men if all the yards would come into an agreement to that effect. The strike leaders in the beginning advocated orderly conduct on the part of their followers, and avowed themselves in favor of conducting the strike in a peaceable manner. The strikers had set aside, in their treasury, a considerable sum of money, in expectation of a refusal of their demand by the employers, and the great rush of work in shipyards all over the country at that time encouraged the men to stand firm, as they were reasonably certain of not being out of work long, in the event of losing the strike.

One reason they advanced, in support of the justice of their demand, was that few trades were compelled to work longer than nine hours a day, and some of the shipbuilding trades had a nine-hour day. The position taken by the employers was that they would lose largely by the reduction in the number of working hours, as contracts had been made on the basis of the ten-hour day. A nine-hour day would be equivalent, they said, to an increase of ten per cent. in wages, and this increase would bear heavily against the yards which had figured on contracts under the old system. The president of one large shipbuilding concern said that his firm intended to increase the wages of the men, if certain contracts then pending were secured, but that the action of the men would prevent the firm from making any further efforts to secure the contracts.

Captain R. M. Spedden, of the R. M. Spedden Company, told his employees on the day of the strike that their demand would have been granted without a resort to that measure, and asked the strikers' committee, which waited upon him, to send the men back to work the next day, and under the nine-hour system.

On June 2 representatives from the shipyards of the Columbian Iron Works, the James Clark Company, Charles Reeder & Sons, E. J. Codd and Company and Thomas C. Basshor & Co., held a conference, and came to the conclusion not to comply with the demand of the strikers. It was said at this conference that had the companies been given sixty days' notice, they might have so arranged their affairs as to have given the nine-hour day, but that under the existing circumstances, it could not be granted without loss to the employers. It was announced that the men would be given a short time in which to return to work, and failing in this, their places would be supplied.

The one hundred employees of the R. M. Spedden Company returned to work on June 2nd, and the nine-hour day was also granted eighty employees at the Campbell-Zell works without a strike becoming necessary there. The strikers did not go to the yards where their demands had been refused. A meeting was held on the night of June 2nd, at Park avenue and Fayette street, and it was stated that thirty-five boiler-makers had quit work at the Reeder shops. A speech was made by Mr. J. Benjamin Armsworthy, president of Oriole Lodge, No. 193, Boiler-makers and Iron-platers of America, in which he said that some shipyards were willing to give an increase in wages, but that the object of the strike was the securing of a nine-hour day. One interesting statement made at the meeting was that in Baltimore the lowest wages were paid, and the men compelled to work more hours than in Chicago, Boston, Brooklyn, New York and other cities. A committee, which had waited on Mr. E. J. Codd, reported that he had acknowledged that they were right in asking for a shorter workday. The James Clark Company was reported to have agreed to the strikers' proposition, in the event that other firms did the same.

On the following day a number of machinists and blacksmiths in the yards of the Clark Company and the Reeder's, came out and another meeting of the strikers was held, at which encouraging reports were received. Nine pattern-makers quit work at

the Columbian Iron Works, and the Baltimore Association voted \$200 in aid of the Boston pattern-makers, who had struck for nine hours.

On June 5th, the strikers began to reap the results of their determined stand. Mr. Codd called a meeting of the ship-builders and boiler machine makers, and informed them that his company would accede to the demand, and grant a nine-hour day, because it was so pressed with work that it had to have the men back. The new rule went into effect at the Codd yards the following day, and applied to all the workmen employed by the company. The Campbell-Zell Co. followed up its action in giving the boiler-makers and iron-platers a nine-hour day, by extending the system to the machinists and blacksmiths. The Columbian Iron Works, the James Clark Company and the Reeders', however, remained firm, and fifty machinists quit work at the Columbian Iron Works. At a meeting of the strikers on the night of June 6th, some of the men applied for their traveling cards, with the intention of going to Boston, where the nine-hour day was in force, and where from 25 to 50 cents more per day was paid in wages. Over fifty new members were initiated into the Boiler-makers and Iron Ship-builders' Union, and a large number of applications for membership were received. Forty strikers left the city the following day for Boston. The strike continued into July, and by the eleventh of that month it was practically over. The Clark Company and the Reeders' consented to accede to the demand, and the Columbian Iron Works later yielded to the strikers.

STRIKE AT STEELTON.

The mammoth plant of the Maryland Steel Company is at Steelton (Sparrow's Point), in Baltimore county, a few miles from the city. Many of its employees live in Baltimore. On March 2nd, the company announced that the pay of all its employees would be increased ten per cent. April 1st, thus restoring all wages up to the level that obtained in March, 1897, when reduction was made, owing to the business depression. Increases in the working forces were made during the first half of the year, the company having many large contracts on hand. A meeting of the Sparrow's Point workmen was held, on June 14th, and the

advisability of making a demand on the company for a nine-hour day was discussed, the demand carrying with it the retention of the existing scale and an eight-hour day on Saturday.

The meeting was not largely attended, and it was decided not to make any demands on the employers at that time. Hearing of the movement the superintendent called the men together and told them that the company did very little repair work, and was not in competition with the Baltimore shipyards, but with such big ship-building concerns as the Cramps, the Harlan and Hollingsworth Company, and the Bath Iron Works; and if the company did not meet the competition of these concerns, it would have to send its men to seek employment elsewhere.

A few days afterward another meeting of workmen in the marine department was held, and on June 19th, the superintendent of that department was notified that all the machinists and other employees wanted a nine-hour day. The meeting at which this decision was reached was held at Highlandtown and a committee appointed to notify the superintendent. A system of weekly payments was also demanded, and the superintendent was given seven days in which to consider the demands, a strike being the alternative in case of refusal. At the meeting, Mr. James P. Armsworthy, president of Oriole Lodge, Boilermakers and Iron Ship-builders of America, made an address. The committee waited upon the superintendent on June 19th.

The latter did not give a specific answer at the time, but it became known that the company would inaugurate a system of weekly payments, that having been practically determined prior to the formulation of the workmen's demand. The superintendent said, in a newspaper interview, that if a strike should be ordered, most of the 800 employees of the yard would remain at work, as there were "only about 300 hotheads among them who would consent to go so far as striking." A few days later, the company returned an answer to the committee that its request for a nine-hour day could not be granted, although a weekly pay day would be put into effect in the following month in every department of the yard.

A hundred workmen attended a meeting at Highlandtown, on June 25th, and the answer of the company was laid before them. The matter was discussed, but no strike was ordered. When the

question was put to a vote 23 of those present favored a strike. The putting of the negative was received in silence, and the president of the meeting left. President Armsworthy of Oriole Lodge, urged the men to strike, but without effect. The following day, however, a number of men, estimated at 150 by the company, quit work. The strikers claimed that eighteen gangs of riveters, including 54 men and 36 boys, 14 coppersmiths, 4 fitters-up, 14 boiler-makers and a number of laborers went out. They also alleged that 150 men asked for their time, and they received with their tickets, the information that the company had no further use for them. Some of the strikers, the company claimed, returned to work the next day, and it was announced that all the strikers would be given a little time in which to return to work, but that in a few days their places would be filled. The Federation of Labor discussed the strike, and the company's officials asserted on June 28th, that nearly all of the men had returned to work. Several delegates from the Federation visited Sparrow's Point, and they reported that the number of strikers had been larger than the company admitted, but that they were very much in need of organization; that unless a strong organization was formed among them, the strike would not be a success, which, eventually, proved to be the case, the men gradually going back to work under the old conditions, with the exception of those who sought employment elsewhere.

BREW-WORKERS AND BOTTLERS' STRIKE.

In April, the National Brewworkers' Union instituted an investigation into the condition of its members in Baltimore. National Secretary Charles G. Bechtold, of St. Louis, came to Baltimore at that time, and after looking over the field, instructed the union here to demand a shorter workday. From time to time, Mr. Bechtold returned to Baltimore, and finally informed the members of the union that they might be ordered out on a strike at any day. The demand of the brew-workers was for a uniform workday of nine hours.

Engineers at the various breweries, it was claimed, were required to work from 16 to 18 hours a day in busy seasons; drivers worked about the same number of hours, while the brew-workers were at labor twelve or fourteen hours a day. The bottlers also

joined in the demand for shorter hours, and, in addition, asked an increase in their pay of one dollar a week. Two or three conferences were held between the brewers and the employers during July, and it was thought the differences could be adjusted without resort to a strike.

On August 3rd, nearly all the employees in the Baltimore breweries quit work, a strike having been ordered from the national headquarters of the union. Eight hundred men in all, it is estimated, joined in the strike, which was directed particularly against the Maryland Brewing Company. This concern was organized over a year ago, sixteen out of the twenty Baltimore breweries consolidating, namely, those of George Gunther, George Bauernschmidt Brewing Company; Wehr-Hobelmann and Gottlieb Company; Von der Horst Brewing Company; National Brewing Company; Darley Park Brewery; Bay View Brewery; Mount Brewery; George Brehm; Germania Brewing Company; Oriental Brewing Company; John F. Wiessner and Brother, John B. Berger; S. Hellsdorfer's Sons; Baltimore Brewing Company and Eigenbrot Brewing Company. The capitalization of the company was \$14,000,000, and the Maryland made 600,000 barrels of beer of the 675,000 annually put out in Baltimore city and Baltimore county.

The outside breweries were the Lion, the Standard, the Beck and the Spring Garden. The employees of these were ordered out on August 4th. The strike occasioned considerable commotion among saloon keepers, who expected a "beer famine" and hastily made arrangements for shipments from other cities. The brewers announced that they had plenty of beer on hand, but that some saloons would have to send to the breweries for it.

Six hundred strikers held a meeting at Manhattan Hall, on East Baltimore street, on the afternoon of August 3rd. Morning deliveries had been made from the breweries as usual, but upon returning to the stables, the drivers stopped work, and were joined by the other employees. The brewery managers said that not over one hundred and sixty brew-workers had struck, together with half of the two hundred drivers, and the majority of the men out were bottlers and employees in the bottling departments. Gunther's Brewery and the Baltimore Brewing Company reported all employees out, while the Von der Horst, Brehm and Bay View establishments claimed that their men were ready for

work. In the other breweries the number out ranged, generally, over one-half the total number of employees. At the Manhattan Hall meeting a committee was appointed to confer with the managers.

The members of this committee were James H. Sullivan, on behalf of the engineers and drivers; Emil Koenig, on behalf of the brew-workers, and Frederick Boshman, for the bottlers. They were met at the Brewers' Exchange, Park avenue and Fayette street, by John Bauernschmidt, president of the Maryland Brewing Company; George Gunther, Frederick H. Gottlieb, Alexander Strauss, John B. Berger, R. H. Borman and H. Loudeman, managers. There were also present the attorney of the Maryland Brewing Company and President Hirsch, of the Federation of Labor. After discussing the situation, an agreement was reached, as follows:

That engineers should be on duty twelve hours; that the work-day for brew-workers should be nine hours from October to March and ten hours the remainder of the year, or the summer season. The difficulty with the bottlers was left to be adjusted with the Bottlers' Exchange. Drivers were to work as before during the busy period of the year.

The wage scale agreed upon gave the brew-workers at kettles, \$15.00 a week; in the fermenting rooms and storage and packing cellars, \$15.00; in the wash-houses, \$13.00; apprentices, \$9.00; regular drivers, \$15.00; extra drivers, \$12.00; engineers not less than \$18.00; oilers and helpers, \$2.00 a day. The scale was the same that had been in force, but a concession was made by the brewers agreeing to give double pay for work on Sunday. The agreement was immediately taken to Manhattan Hall, where the strikers had remained, and was ratified by a vote of the union, the strike declared off and the men ordered to return to work on the following morning.

It was decided in the conference that all the strikers would be received back in the breweries, with but a single exception. The managers stated that the foreman of one stable had sent his men away at noon and had followed them, without feeding the forty horses in the stable. This act was denounced by the strikers, who readily acquiesced in the wish of the managers to discharge the foreman.

The agreement reached was an amicable one, and both employ-

ers and employees professed themselves satisfied with it, the strikers claiming a distinct gain in the shorter workday. Had the strike continued, fifteen hundred men, it is said, would have been out of work, this number including the employees in the bottling departments of out-of-town breweries. For the lost day the strikers were paid by the National Brew-workers' Union. The four outside breweries signed the agreement made by the Maryland Consolidation with the strikers.

All the strikers returned to work on the morning of August 4th, with the exception of a few bottlers, who claimed to have been kept out of the Bauernschmidt Brewery. The brewery people, however, asserted that all their employees were at work except four bottlers, who had refused to go back, on the ground that their demands had not been considered. The agreement reached at the conference between the strikers and the managers left the bottlers' grievances open for future settlement, the employers claiming that the demand for a shorter workday and a dollar more a week was unreasonable. A meeting of the bottlers was held on the night of August 4th, and it was decided to take no action until the Bottlers' Exchange met, when a contract was presented by the union, to which the Exchange did not assent.

The magnitude of the beer trade in Baltimore made the strike a notable one. The consumption of beer in the city and State is estimated at five hundred thousand barrels annually, and the Maryland breweries make large shipments to Southern Pennsylvania and nearby Southern States. The beer consumed in Baltimore and manufactured outside the State, is estimated at one hundred thousand barrels, three-fourths of the importation being in bottles.

The bottlers' grievances were finally dropped. Their organization was a small one, and composed principally of boys and young men. The employers asserted that the demand of the bottlers for more pay could not be granted; that there was very little profit in the bottling trade and that this little would be entirely wiped out under an increased scale.

ENAMELERS.

Employees, numbering upwards of one hundred, in the enameling department of Matthai, Ingram & Company's factory, Light and Wells streets, went out on strike about

the middle of June. The chief reason, as given by the strikers, for their course, was grievances against the superintendent of that department. Incidentally, the men demanded more pay. A committee of the strikers went to the firm and asked for an increase in wages, and to have the superintendent instructed to "pursue a policy of non-interference" in their department. The latter said that he did not know what specific complaints the men could make. They were paid for twelve hours' work, and his "interference" had been in stopping some of the men, he said, from quitting work in less time. Forty girls employed in the department made a demand that they be given information every night as to their earnings. They did not strike, but as the enamelers had gone out, they had no work to do for a day or so. Men from other departments of the factory were placed in the enameling rooms.

The strikers formed Enamel Workers Union, No. 1, with J. C. Pearce, president; William Sturgeon, vice-president and John Brady, secretary. A committee headed by Mr. Brady was appointed to deal with the employers, and this committee called on manager George Knapp, of the factory, and asked equal pay for all the men and a change in the superintendent of the enameling department. The reply was that equal pay could not be given, for the reason that some of the men were more skillful than others and therefore able to earn more money. In regard to the complaint against the superintendent, it was explained that he was only holding the position temporarily. The strike ended the first of July, the men returning to work.

DETRICK & HARVEY EMPLOYEES.

The employees of the Detrick & Harvey Machine Company, Preston street, near Greenmount avenue, on June 25th, gave notice to the firm that a strike would be ordered unless the work-day was made nine hours instead of ten. The firm immediately refused to make the concession, and a strike followed. General Manager Jacob S. Detrick told a committee which waited upon him that no time was needed by the employers in order to consider the subject, and that under no condition would the firm reduce the hours.

One thing which placed the firm in a position to withstand the

demand was that all contracts made by it embraced an express provision covering delay on account of strikes, and for that reason the standing of the company could not be injured by temporary idleness of its plant. New men were at once engaged to take the place of the strikers, and a few of the strikers were prevailed upon to return to work. On June 27th, however, the plant was almost at a standstill. One hundred and seventy employees went out at the institution of the strike, and nearly all of them remained out. The strikers held meetings and announced that they would stand firm for a nine-hour day.

On behalf of the company, General Manager Detrick said that it was an impossibility for the demand to be granted; that the company was not competing with Baltimore manufacturers, its work being principally the manufacture of tools, and in this, competition was solely with the North. Enough work was then on hand to keep the men busy for six months, and the company had been operating its plant twenty-two hours a day prior to the strike. The day gang and the night gang each made sixty hours a week, and the demand of the men meant that they wanted pay for 60 hours, while working but 54, said Mr. Detrick. He announced that it was proposed to allow the men a reasonable time in which to think the matter over, and that if they did not return to work, others would be brought to Baltimore to take their places. Some of the strikers had been with the company for twenty years, and these, it was said, should be given the preference; but if they remained out until their places were filled, no future provision would be made for them. The company's contracts had been all made on the ten-hour basis.

On the part of the strikers it was decided to make no demonstration, but to allow matters to proceed quietly, and resolutions were adopted pledging the strikers in case even one man returned to work at the shops, not to go back themselves under any consideration while the deserter remained in the employ of the company.

Business in the company's shops was suspended on the 27th of June, and the firm started to fill in the time by making repairs to the buildings and machinery, the latter having shown the effects of the strain of running twenty-two hours a day. The firm, from day to day, reiterated its determination not to treat with the men as to a nine-hour system. In the early days of July, the firm

adopted the policy of putting a few men to work daily, and announcing that the places of the strikers would be gradually filled. and after this had been done, none of the men who were out would be re-employed. The strikers asserted that enough competent machinists could not be secured by the company to take their places.

The shops were re-opened on July 6th. When the one hundred and fifty strikers went out, twenty-five men and boys refused to join them. On July 13th, the strike was declared at an end, after having lasted three weeks, the strikers, being unorganized, failing to gain their point. A committee was sent to the firm with a request that the strikers be re-employed, and this the company readily consented to do, explaining that they had no ill-will against their employees, and that the nine-hour demand could not be considered because of the close competition.

AT THE McSHANE BRASS FOUNDRY.

On June 26th there was a strike in the molding department of McShane & Company's brass foundry, sixteen men quitting work. Their grievance was that a change had been made in the system of pay. They had been getting one and a half cents for each mold turned out, and the firm notified them that their pay in the future would be ten per cent. of the value of the work.

It was claimed by the firm that this change meant increased pay, but the men were convinced that their pay would be decreased, owing to the deductions made from their earnings for defects in castings. These defects were alleged to be due to the quality of metal used, rather than to workmanship. The firm was asked to return to the old method of payments, but this request was refused. The strikers numbered but a small proportion of the employees, and most of them returned to work on the following day and the strike soon ended. The strike turned out to have been due to a misunderstanding of the position of the firm, according to the superintendent, who said that the firm had decided to pay a ten per cent. increase on all perfect molds, thus raising the price per hundred from \$1.50 to \$1.65, and that the increase was justified by its insuring a greater number of perfect molds.

• SHOE CUTTERS.

Shoe Cutters' Union, No. 23, which has about 40 members, on November 15th, after a notice of two months, ordered a strike

for an advance of ten per cent. in wages and the recognition of the Union. The strike lasted for several weeks, the Clement and Ball Shoe Company being the principal employers against whom it was directed. Eight of the strikers were benefited, the firm named acceding to the demands. Eventually, twenty-four of the strikers returned to work at the old scale.

IRON MOULDERS.

A strike occurred early in July in the stove works of A. Weiskittel & Sons, Aliceanna and Washington streets, because of the employment of a non-union moulder. Thirty iron moulders went out. Efforts which were made immediately to reach an agreement were unsuccessful. Vice-president Joseph Vincent, of the Iron Moulders' Union, and Superintendent Weiskittel had a conference on July 7th. Mr. Vincent notified Mr. Weiskittel that the firm must not employ non-union men if union men were expected to work in the plant, and Mr. Weiskittel refused to bind himself by such a concession. He said he was willing to take the strikers back, but that they must not impose any conditions. The strike continued until a few weeks ago, when it was reported to the Federation of Labor that a satisfactory agreement with the firm had been arrived at.

TAILORS.

A reduction in the wage scale by Henry Sonneborn & Company, manufacturers of clothing, 8-14 South Eutaw street, led to ninety tailors going on strike September 30th. The tailors were employed in four East Baltimore shops by contractors, under Sonneborn & Company. It was claimed by some of the strikers that their action was the result of a reduction in the price of making trousers from twelve-and-a-half cents to ten cents. The work in hand consisted of trousers for the summer trade of 1900, and the firm, it was asserted, being in no particular hurry for the completion of the contracts, had made the cut in wages. Henry Holofcener, 1006 East Fayette street, one of the contractors, said that the strikers had been working for less than the scale brought about by the reduction, for a number of years. The old scale had been ten cents a pair for trousers for operators; eight cents for finishers and three-and-a-half cents for pressers. In the fall, Son-

neborn & Company, having an extensive stock of winter goods to be made up, advanced the scale two cents for operators and finishers and one cent to pressers, this being done for the purpose of having the work finished quickly by expert tailors. The firm, when this stock was made up, concluded that it could not afford to continue the scale on the summer goods, which were given out to be made up during the winter months. Consequently, a reduction of one cent each for operators and finishers and one-half cent for pressers was made, the new scale still being an advance of the same amount of the reduction over the old one. Contractor Holofcener claimed that the demand of the strikers for the maintenance of the scale as first increased, was unreasonable. Under the final scale they would be making more money than they had for years. New workmen were secured to take the place of the strikers, and most of the latter went to other shops where different work was to be had.

BOYS GO ON A STRIKE.

On September 22nd sixty-five boys employed in the factory of the Crown Cork and Seal Company, 1511-23 Guilford avenue, struck for an advance of fifty cents a week in wages. The boys were employed as helpers and operators of machines used for placing the corks in seals. Each machine requires an operator and a helper to run it. The boys ranged in age from thirteen to eighteen years. The strike was brought about by the older boys, it was claimed, who asserted that the employers demanded more work of them than had been customary. The pay of the employees was \$3.50 a week for helpers and \$4 a week for operators. The strike lasted a very short while, the boys going back to work. The employers said that the strike could be but a temporary affair, inasmuch as they would have no trouble in securing boys to take the places of those who quit.

During the same week in September, seventy-five boys employed in the glass factory of Swindell Brothers, at the foot of Russell street, were out on strike for an advance in wages. Nearly all of them, however, returned at the old rate.

SHIP CAULKERS.

A committee from the ship-caulkers waited on their employers on June 19, and requested an increase in wages from \$2.50 to

\$2.75 per day. In Baltimore there are about 150 ship-caulkers, and it is seldom that all of them are employed at the same time. With the introduction of iron and steel hulls the caulking industry began to decay, and the 600 caulkers of some years ago became reduced to the present number. Most of the caulkers of years ago were colored men. At a conference between the committee and the shipbuilders, the question was exhaustively discussed, and the caulkers concluded to withdraw their request. The employers pointed out that at the shipbuilding centres outside of Baltimore caulkers worked ten hours for the same pay given in Baltimore for nine hours.

SEAMEN.

Mr. James H. Williams, local agent at Baltimore of the Atlantic Coast Seamen's Union, sends this Bureau the following report, which will doubtless prove of great interest, inasmuch as it deals with a subject of the highest importance to Baltimore, which port stands far toward the front in the maritime affairs of the country, and brings the city and the State into close relations with other cities and States on the Atlantic and Pacific sea-coasts and with foreign countries.

Mr. Williams was for four years the local agent of the Atlantic Coast Seamen's Union at New York and while there, was instrumental in bringing about many reforms of benefit to seamen, both coastwise and foreign. During his recent work in Baltimore, he has been able to exert a far-reaching influence upon the welfare of seamen. The value of the recommendations that he makes as to the effect of State legislation upon the interests of seamen is attested by the success of similar legislation in New York, and it is hoped that whatever abuses may exist in regard to the seamen will be taken cognizance of by the Maryland General Assembly.

Mr. Williams writes:

As the duly accredited representative of the organized seamen of this State, I desire to call your attention to the present deplorable condition of our sailors, as well as to certain abuses and violations of the national shipping laws within the State to which these unwarranted conditions are mainly due.

It is my further desire to impress upon the General Assembly of Maryland the necessity for remedial State legislation calculated to ameliorate these unjust conditions and protect our merchant seamen from the insatiable imposition of those designing personages who make their life a burden and their vocation a curse.

For ages past the seaman has been the slave of arrogant commercialism; the victim of brutal sea-tyrants and the helpless prey of designing beach pirates. He has been deprived of his liberty by means of obsolete laws, denied his rights by stupid and prejudiced officials, robbed of his manhood to enhance the gains of merciless

shipmongers and relieved of his hard earnings to sustain a vicious and remorseless crimping system.

The "crimping system" as it now exists in the port of Baltimore, and elsewhere throughout the United States, is a relic of a dead and bygone age, when human rights and personal liberties were less sacred than now, and when the old time press gangs were regarded as a necessary, if not legitimate, institution for the procurement of seamen. Time, progress and legislation have long since abolished the press gangs, but in the United States generally and the State of Maryland in particular, their practices still exist and flourish in the form of the pernicious crimping system, a curse to our merchant marine and seamen and a libel on our proud claim of equal rights and common protection to all.

Recent legislation by Congress has somewhat ameliorated the working conditions of the sailor's life, but until the crimping system, in all its ramifications, has been finally and totally abolished by statutory inhibition, other laws to protect seamen will be largely nugatory in effect. For, so cunning, unscrupulous and withal, so powerful in a political sense in their respective localities are the crimps, that the slightest loop-hole in a law through which they can intrude their iniquitous methods speedily becomes a practical negation of the whole body of the enactment.

In order to convey a fair idea of what the "crimping system" really is, a brief description of the crimps, their character and methods may here be deemed apropos. The crimping system, as now constituted in the port of Baltimore, which, by the way, is a fair sample of the general system throughout the country, is a chartered organization, incorporated under the laws of Maryland. Ostensibly, the purposes of this organization are merely "beneficial and social;" in reality, they are to evade the national laws openly and violate them covertly in dealing with seamen; to rob sailors, either by fraud or violence; to monopolize the shipping of the port by bribing shipmasters and intimidating seamen; to prevent seamen from seeking or securing employment for and by themselves in order to appropriate their advance wages, and to boycott either seamen or shipowners who refuse to concede their authority or pay tribute to the crimps. In short, it is a "sailor trust," pure and simple.

The genus homo referred to as the crimp may be classed under two heads; the shipping master and the boarding master, each of

whom has one or more understudies whose honorable appellation of "runners" suggests their exalted calling in life; while the term "Jackal" applied to them by sailors is, perhaps, still more suggestive of their real characteristics. The duties of a "runner," who is, usually, an all-around tough, consist in inducing seamen, especially the unsophisticated class arriving in foreign vessels, by hook or by crook, to desert; to conduct them into the clutches of the boarding master; to assist in relieving their victims of any loose cash of which they may be possessed; to convoy them on board some outward bound vessel when their time on shore expires, and to do sundry other things, all of which may be lumped under the head of what sailors term "dirty work;" for all of which pretended services Jack himself is graciously permitted to pay with compound interest out of his advance note.

The prime factor in this nefarious business of trading on the seaman's necessities and misfortunes, is the shipping master—a class of parasites from which all maritime nations have sought to protect their seamen. These may be fitly described as middlemen, who, with a view to their own pecuniary advancement, obstruct the free intercourse between shipmasters and seamen in mutually contracting for a voyage. Legally, and also in nautical vernacular, they are known as "crimps," although they are dignified by the appellation of shipping masters or agents, among themselves. Their ostensible occupation in life is to procure crews for vessels. This, in other maritime countries, is a governmental function, the infringement of which by outside parties is considered a criminal offence and dealt with accordingly. The United States Congress has long since declared "crimping" unlawful, but, owing to the fact that no Federal officers have been appointed to perform the duties which the "crimps" appropriate to themselves, the laws have been allowed to become dead letters and the seamen helpless chattels. True it is, that since 1872. United States Shipping Commissioners have been appointed, in accordance with act of Congress, at a score at least of our principal seaports, including Baltimore. The purpose of the Act of 1872 was clearly to protect seamen and facilitate commerce. From a variety of causes, however, the original law and the subsequent amendments thereto, have fallen far short, in practical results, of the expectations of their promoters. The lamentable failure of these laws has been due, not to any lack of sincerity on

the part of our national legislators, who conceived and framed them in good faith for the sailors' protection and benefit, but rather to their lack of practical knowledge of the actual condition and needs of seamen and to the malign influence and misrepresentation of unscrupulous shipowners and designing "crimps."

Having secured defects in the enactment of these laws, under the guise of sailors' friends, the "crimps" set to work at once to conduct their nefarious business through the loop-holes. This they were enabled to do with the utmost impunity and utter disregard for the sailors' rights by enlisting the powerful assistance of avaricious shipowners, who, for business reasons, would not scruple to regard the sailor's labor as a mere marketable commodity and his person as chattel property.

The duties of the United States Shipping Commissioners under the law are merely perfunctory, and their jurisdiction is restricted entirely to ships and seamen engaged in the foreign trade proper. Inasmuch as 90 per cent. of our American tonnage is employed in the coastwise and domestic trades it will be seen that the beneficent and protective features of the law apply to only 10 per cent. of our merchant seamen. Moreover, the Shipping Commissioners have been usually selected with more regard to business or political interests than to the welfare of seamen. That no special fitness, practical knowledge or educational acquirements have been exacted of candidates for the office of United States Shipping Commissioner is proven by the fact that heretofore many of these officials have been appointed directly from the ranks of the crimps, while others have been ordinary tradesmen and politicians.

The logical and obvious result of such a policy has been to render the Commissioner's office, in many cases, a palpably useless and inefficient innovation on the old shipping system. For where ignorance and indifference are permitted in place of knowledge and interest there can be no efficiency.

Another serious drawback to the efficiency of the Shipping Commissioner's office consists in the fee system of compensation, provided by law, which under present conditions renders our Commissioners largely dependent on the good will of ship-owners for their incomes and office expenses.

I have already stated that in the present division of our commerce, the law places but 10 per cent. of our shipping in the hands

of the Shipping Commissioner. With the other 90 per cent. the option lies with the owners, which makes it advantageous to the Shipping Commissioner to bow to their wishes whenever possible in order to retain their patronage for his office.

For a Shipping Commissioner to attempt to enforce strict compliance with the Navigation laws in all cases, would be to incur for himself the lasting displeasure of ship owners and the consequent loss of most of his official business. The functions of the Commissioner would then be transferred almost entirely to the crimps, and the great majority of seamen would be compelled to sign articles on the head of a whiskey cask and receive their wages in a gin mill.

From the foregoing statements it must be apparent that at present laws enacted for the protection of seamen are more honored in the breach than in the observance; and that a general revision of the national shipping laws is necessary to effect an improvement. Such a revision is not within the province of the State Legislature; but there is much the State can properly do to enforce respect for the national shipping laws, abate the crimping evil, prevent fraud and insure legal protection for seamen somewhat adequate to their needs.

Owing to the fact that the merchant marine is the natural recruiting source of the navy, the sailor has always in maritime countries been regarded as a ward of the nation, for whose particular needs special legislation has been found necessary.

Those governments possessing the strongest navies to-day have invariably done the most for the protection of their merchant seamen and the encouragement of commerce afloat. Indeed, it may be laid down as an axiom that the naval and maritime standing of any nation is in exact ratio to the amount of protection accorded their merchant seamen. What nation to-day protects the rights, interests and persons of its seamen so jealously as Great Britain; and what nation can approach her as a naval and maritime power?

In pursuance of this policy of maritime paternalism the government of the United States has from time to time enacted laws for the better protection of our merchant seamen. These laws, altogether substantially the same as those of other maritime nations, are less effective because seldom enforced. The Act of Congress, approved December 21, 1898, of which the accompanying circular is a synopsis, is on the statute books, the most beneficent and

salutary legislation ever enacted in this country for the protection of seamen. It places our laws on this important subject on a par, practically, with those of other nations possessing merchant marines equal to or superior to our own. Yet this law even falls far short in practical effect of its logical purpose because Congress has omitted to provide adequate means for its enforcement. In proof of this, witness the flourishing condition of the pernicious "crimping system" and the hopeless and unfortunate plight of the seamen in Baltimore at present—more than one year after the Act became a law. As I have already stated, special laws to protect seamen are of no effect unless supplemented by special laws to suppress crimping, and—this is the main desideratum—special and competent officials to enforce them both.

Congress has prohibited advances of seamen's wages being paid in all domestic trades under severe penalty, yet they are paid almost uniformly in certain classes of vessels because there is none to protest except the seaman, whose protest would be unavailing and, if made, would compel him to starve in the streets for want of employment; the law prohibits the exaction of shipping fees under penalty, yet shipping fees are regularly extorted and collected from seamen because the crimp is permitted to control the shipping and thus enslave the unfortunate seaman in search of a berth. It is unlawful to detain a seaman's clothing or other effects, but no one comes to his relief when his goods are held by a saloon-keeper as security for an alleged debt for board, etc., which on investigation usually proves to be a charge for liquors. It is by such means as this that the publican, who is usually the seaman's boarding master, also becomes the "original creditor" of the outward-bound sailor and is permitted to collect his first month's wages before they are earned. The law fails of effect from laxity of enforcement; the sailor is a slave for want of legal protection, and the crimping system is a success because the law is a failure.

Some idea of the extent to which the laws of the United States have been violated in Baltimore through the machinations of crimps may be gathered from a few cases taken from the record of the United States Court for the District of Maryland during the year 1899. The cases cited were brought to the attention of the authorities by the Agent of the Seamen's Union and it may be mentioned that scores of similar cases have been disposed of

through the United States Commissioner's office during the same period.

The Baltimore branch of the Atlantic Coast Seamen's Union was established early in January, 1899. During the same month the crew of the schooner "Warren Adams" was discharged in Baltimore and the sum of \$10 per man, amounting to \$50 in all was deducted from their wages by the master of the vessel who claimed to have paid that amount to a certain crimp at Brunswick, Ga., where the voyage originated, in order to secure his men. The seamen protested against the deductions for shipping fees basing their contention on the prohibitions contained in the Act of Congress approved February 18, 1895, commonly known as the McGuire Act. The case was carried to the United States District Court. The Court held that all charges made for shipping fees and all deductions from seamen's wages on account of such charges were illegal and would not be allowed. In the hearing of this case it developed that the Act of 1895 had been ignored in Baltimore throughout the four years of its existence until brought to light by the Seamen's Union. As a local paper expressed it in reporting the case—"the decision was new in this section of the country."

Another case of much significance was that of the United States against Pitipau in February, 1899. In this case the crimp had resorted to what is known as the "bonus" plan of evading the law prohibiting advances. Certain seamen were engaged for the bark "Doris," then bound on a voyage from Baltimore to Vera Cruz, Mexico, and return. Since Mexico comes within the category of "exempted" trades under the law, no advance could be charged against the wages of the crew at the pay table. In order to overcome this little legal inhibition, the sailors were induced to sign articles for five dollars per month less than the regular wages, the crimp arranging with the owners for the payment of full wages. This process would have enabled the crimp to collect for his own benefit, twenty-five per cent. of the entire wages of the whole crew for the voyage.

Pitipau was arrested on a warrant issued by the United States Commissioner, who, after hearing the facts, ordered the crew to be re-signed at the regular rate of wages from this port. While Pitipau escaped the legal punishment which his offence merited,

the seamen also escaped the imposition to which they would otherwise have been subjected.

But perhaps the most remarkable case on our calendar for last year affecting the rights of seamen, and one of the most far-reaching in its effects ever decided in this country, was that of the United States against Goodhues, Garland & Co., in the United States District Court, November 23rd, 1899. This was a criminal action brought by three seamen from the British steamship "Ethelred" against the above named firm, and, in its determination, by the Federal Court was involved the right of jurisdiction assumed by the United States Government over foreign ships and seamen in American ports. By special proviso, the various acts of Congress, limiting, restricting and prohibiting advances to seamen or their "creditors," as well as the inhibition against shipping fees are made equally applicable to American and foreign vessels, while trading from ports in the United States. When we consider that nearly ninety-two per cent. of the American export and import trade is carried in foreign bottoms, and that ninety-five per cent. of the seamen employed on American ships, at present, are foreigners, the wisdom and necessity for such a proviso becomes apparent. A high rate of advance always means low wages for seamen and vice versa; hence, the restrictions of the United States law proved irksome to foreign shipowners who would prefer to pay the seamen's wages to the crimps in order to procure their labor cheaply. Moreover, the law was distasteful to the crimps because to stop the advance meant to deprive them of their long established proprietorship in the sailor's person and end their occupation.

Under such circumstances it is not surprising that the foreign shipowners and masters were willing to co-operate with the crimps in their efforts to defeat the purpose of the law relating to advances. The plan finally adopted by mutual agreement between the crimps and their foreign employers, or their local representatives, was to sign crews for foreign vessels from Baltimore at the nominal rate of one shilling for the first month, or for such longer or shorter period as the length of the voyage might warrant.

Up to the time the Seamen's Union became a factor in local shipping affairs, these reprehensible practices were conducted with impunity and to the entire satisfaction of foreign ship-owners and local "shipping agents." Seamen were compelled

to work one month, more or less, (as the case might be), for the crimps before any part of their wages would accrue to their own benefit. After a short voyage of, say, one month, or less, the sailor had nothing coming to him, and frequently found himself in debt to the ship. He was then thrown on the beach either to become again a chattel of the crimp or a charge on the community.

The Seamen's Union had long felt the injustice of this abominable practice and sought to break it up; but the cunning crimps always covered their tracks with such consummate adroitness that valid evidence against them was difficult to secure.

Protests to foreign consuls were found to be unavailing since the consuls refused to act except under specific instructions from their respective governments; and, since the foreign governments in question were blissfully ignorant of these abuses no such instructions were forthcoming. In this dilemma it was determined, all other means having been exhausted, to secure a test case, so to speak, and bring the matter to the attention of the Federal Courts for adjudication.

Late in October, 1899, a crew of sailors and firemen was engaged through the shipping firm of Goodhues, Garland & Co. for the British steamship "Ethelred," then bound on a voyage to Port Antonio, Jamaica, and return to Baltimore. Among that crew were three members of the Seamen's Union who shipped under instructions from the organization. At the consul's office the crew was informed by the crimp that they must sign articles for one shilling (twenty-four cents) for the first twelve days of the voyage, and that thereafter they would be entitled to full wages. The crew signed as ordered and on their return to Baltimore were proffered the munificent sum of \$3.17 for their services for sixteen days and an equal number of nights. The three union seamen protested, refused to accept the sum offered them and appealed to the United States District Court for protection. The result of this trial was most satisfactory in so far as the seamen's interests were concerned. Each member of the shipping firm was fined one hundred dollars, the maximum penalty, for charging illegal shipping fees; and a libel action against the ship for the wages actually due the seamen was settled out of Court, the agents making full payment.

The decision in this case was made the basis of an extended

correspondence between the governments of the United States and Great Britain on the questions involved. The correspondence culminated recently in the issuance, by the British Foreign Office, of a circular, instructing all British consuls in this country to discountenance the engagement of seamen for nominal wages and to refuse to sanction such engagements. The consuls are further instructed to observe strictly the letter of the United States law on the subject of shipping seamen and, in case their action is impugned, to invoke the aid of the Federal courts at the expense of the British government. These instructions should be sufficient, it would seem, for the ordinary protection of seamen who prefer to sail in British ships, and we believe it is only a matter of time when other governments will be constrained to take similar action for the protection of their seamen.

The sailor has been called the advance agent of civilization. He is the herald of the world's progress. He is a cosmopolitan. His labor is a benefit and a blessing to all countries; wherefore, he is equally at home in all countries; sails under all flags and claims the protection of all nations. The sailor is not an ingrate; he realizes his own improvidence, the natural result of long spells of absteniousness and privation at sea; he knows full well his own helplessness in the hands of the crimp; he blesses the hand that delivers him from imposition and cheers for the country that most appreciates his worth and safeguards his rights. If our merchant marine is now to be considered in its proper light as a great commercial and civilizing factor in time of peace and an indispensable adjunct to our navy in time of war, then it would seem that a patriotic regard for the future welfare of our country would impel our statesmen and people generally to keep it up to the highest possible standard, both in regard to material and personnel. Under the rule of the crimp, the sailor becomes demoralized, in body, mind and character. He loses all his native self-respect, pride and ambition. He eventually becomes a mere creature instead of a man. All his finer feeling becomes deadened in the constant orgies of dissipation and debauchery to which the crimps subject him while ashore.

In case of great national emergency must the brawn and brain for outward defense be selected from among such degraded surroundings? Will the constant spoliation of useful and devoted seamen by lawless and unscrupulous blood suckers redound to

the best interests of our country? Shall we attempt the novel feat of trying to produce a silk purse from a whale's fluke?

The organized seamen of Maryland have thus imperfectly stated their case. Since our existence as a union we have endeavored by all means at our command to protect the men of our craft and will continue to do so. Much remains to be done, however, before the sailor can claim the respect which is his due. The crimp and his pernicious occupation must be abolished before the sailor can be raised from degradation and released from bondage, and to facilitate this result, we devoutly pray that the State Legislature will be pleased to enact appropriate laws. An official investigation of the crimping system in the port of Baltimore would reveal much of the true inwardness of the evil and inspire suggestions for its abolishment. The licensing and supervision of all sailors' boarding houses by the State would greatly improve the character of those establishments and make it possible for seamen to live in decent environments while ashore. We devoutly hope this will be done.

A law to abolish "saloon" boarding houses would be of incalculable benefit since it would redound to the sailor's moral and material improvement and at the same time, tend to defeat some of the most reprehensible and best cherished iniquities of the crimps. In conclusion, the Atlantic Coast Seamen's Union reposes its confidence in the honor and patriotism of the legislature of Maryland. We feel sure that our plea for justice will not be in vain and that ere long the sailor will enjoy proper protection within this State.

And the time will come when this nation, as a whole, will rise to a realizing sense of its own responsibility and manifest duty to the sailor, and provide proper laws for his protection and adequate means for their enforcement. Both our merchant marine and navy will then become Americanized; seamanship will be an honorable calling, the old maritime prestige of our country will be restored and American boys will go to sea.

Respectfully,

JAS. H. WILLIAMS,

Baltimore Agent, Atlantic Coast Seamen's Union.

The synopsis of the Act of Congress, to which reference is made, is as follows:

1.—By the provisions of Section 4516, R. S., as amended, no vessel of the United States will be allowed to sail from any port shorthanded, if seamen are obtainable in that port, under severe penalty.

2.—Under the new law, no seaman can be arrested or imprisoned either for leaving or refusing to join any vessel, whether bound coastwise or foreign, while such vessel lies in a domestic port, or at any port in the West Indies, Mexico or the Dominion of Canada.

For desertion a seaman must forfeit whatever wages he has earned up to that time, and for absence without leave he may be fined one-half of one day's pay; but in neither case can he be punished criminally.

3.—By the amendment to Section 4526, R. S., destitute or shipwrecked seamen must hereafter be provided with "sufficient subsistence" and a passage home at the expense of the United States, instead of having their wages garnisheed to a consular agent or paid to a steamship company as formerly.

4.—Seamen arriving from coasting voyages must be paid immediately upon discharge, and from a deep-water voyage within four days, and, in all cases, one-third of the wages due must be paid on account at the time of discharges, or otherwise the seamen's wages continue until they are paid at the rate signed for.

At every point where a vessel shall load or deliver cargo, the crew shall be entitled to one-half the wages due them, unless the contrary be expressly stipulated in the articles.

5.—By the amendment to Section 4547, R. S., claims brought by seamen against vessels touching wages will be given preference in the United States courts. This will greatly facilitate litigation in such cases, as disputes over wages can now be settled in court within a few days, whereas, under the old method of procedure, it required months to reach them on the regular calendar.

6.—The amendment to Section 4556, R. S., gives to the majority of the crew of any vessel the right to order a survey, if before leaving port they discover that the vessel is unseaworthy, shorthanded, short of provisions or deficient in her body tackle or rigging. In case the vessel is in a foreign port a majority of the crew cannot order a survey without the concurrence of one of the

officers. In a domestic port, however, such a concurrence is unnecessary.

For refusing to comply with such a demand for a survey made by a majority of the crew, the master will be liable to a penalty of five hundred dollars fine.

7.—By the terms of Section 4611, R .S., as amended, flogging, "belaying pin soup," and all other forms of corporal punishment hitherto inflicted on seamen by ship's officers, are strictly prohibited; no form of corporal punishment will be deemed justifiable under the law, and any master or officer who beats or wounds a seaman shall be imprisoned not less than three months or more than two years without fine. In case any officer of a ship has committed an assault upon a sailor during a voyage, the law holds the captain responsible for his surrender to the proper authorities upon arriving in port, and if the offender is permitted to escape before his arrest can be effected, then the captain becomes liable in monetary damages to the injured seaman.

8.—By the amendment to Section 23 of Section 4612 of the United States Revised Statutes, an entirely new and comparatively sumptuous scale of provisions is provided for seamen in all trades. This scale is made a matter of Statute and cannot, therefore, be reduced by any contract. The seamen shall have the option of accepting such fare as the master may provide in preference to the scale, but their right to demand the statutory scale of provisions cannot be waived.

The scale of provisions must be inserted in every article of agreement, and shall not be reduced by any contract, and shall be posted conspicuously in the galley and forecastle of each vessel. When the vessel is in port the crew must be supplied with fresh vegetables, fresh fruit and fresh meat from ashore, provided such articles of food are obtainable.

In case the provisions of any seaman are reduced in quantity not exceeding one-third, he may demand and recover as wages a sum equal to fifty cents per day as compensation during the period of reduction.

In case the amount of reduction in food exceeds one-third of the allowance, then the seaman may claim a sum not exceeding one dollar per day as long as such reduction continues. In case the quality of the food is bad the penalty is the same, one dollar per day.

A seaman's allowance of food may be reduced to a reasonable extent as a means of punishment, provided his conduct merits such punishment, without incurring the above penalties on the vessel.

9.—All forms of advance or allotment of seamen's wages are absolutely prohibited in the coastwise trade, the trade to the West Indies, Mexico or British America.

In the deep-water trades a limited allotment not exceeding one month's wages is permitted; and in all other trades the allotment is reduced to fifteen and twenty days' pay.

Any person paying allotments, except as above, shall be liable to punishment, and, upon conviction, shall be fined a sum not less than four times the amount of the advance paid. All sums paid and deducted from the wages of seamen contrary to law, must be paid to the seamen at the end of the voyage, notwithstanding any claims presented by interested parties for board, whiskey or shipping fees.

Any person convicted of demanding or receiving, either directly or indirectly, from any seaman any remuneration for furnishing him with employment shall for every such offence be liable to a penalty of one hundred dollars fine.

The letter from the British Foreign Office to British consuls, referred to, is as follows:

FOREIGN OFFICE, February 12, 1900.

SIR:—I am directed by the Marquess of Salisbury to call your attention to the Act of Congress of the 21st December, 1898, which contains provisions prohibiting the payment of advance wages to seamen, the main object of the latter being to protect the seamen from the extortions of boarding house keepers and shipping masters (crimps). These provisions were communicated by the United States Government to their Collectors of Customs and Shipping Commissioners in a circular letter dated the 8th February, 1899, a copy of which was sent you by Her Majesty's Embassy at Washington in March.

It has been found that this regulation is evaded on British vessels by making the seamen sign an agreement to serve for a certain term at the beginning of the voyage for the nominal sum of 1s., and thereafter at the regular monthly rate. This practice has, however, recently been declared to be contrary to the law of the United States of America by the District Court of the United

States for the District of Maryland in the case of the British steamship "Ethelred."

Unless and until this judgment is reversed on review by a superior court, you will be justified, if satisfied, either upon evidence before you or as a result of inquiry made, that the agreement does not truly represent the real transaction in not sanctioning the engagement, more especially if you have come to the conclusion that the real transaction is an evasion of the salutary provisions of the United States Act. In such a case you are authorized to refuse to sanction such an arrangement.

It has been pointed out that cases occasionally occur of "bona fide" special arrangement being made for various reasons, according to which men work their passage home at a nominal wage. Care should, therefore, be taken to distinguish evasions of the law from such bona fide engagements.

In conclusion I am to state that such legal expenses as you may incur in defending your action, should it be impugned, will be defrayed by Her Majesty's Government.

I am, sir, your most obedient, humble servant,

F. H. VILLIERS.

SWEAT SHOPS.

During the year, Dr. C. Hampson Jones, Health Commissioner of Baltimore city, made a sustained effort to enforce the "sweat-shop" law, and to this end, his subordinates made a house-to-house canvass of the district in East Baltimore where the greater number of "sweat-shops" are located. Dr. Jones says that the prosecutions were very few, owing, in part, to the obscurity of the laws relating to the power of the Health Commissioner to enforce sanitary regulations. He holds that one notice to alleged "sweat-shop" proprietors is sufficient, an opinion which has not been shared by magistrates at the police stations, who, for the most part, appear to think a notice imperative upon each occasion when the health authorities believe themselves justified in invoking the law to abate "sweat-shop" nuisances. The word "habitually" in the law relating to "sweat-shops" also gave some trouble to the health department, and Dr. Jones secured an opinion from City Attorney Greenbaum as to when such an establishment could be considered "habitually" unclean and unsanitary. Mr. Greenbaum held that, should notice be given proprietors to clean their places, and not to overcrowd their employees, and such notice should be disregarded, as manifested upon a subsequent visit of the sanitary inspectors, the courts would doubtless rule that such shop was "habitually" unsanitary.

It has been pointed out frequently in Baltimore, that tuberculosis was common among sweat-shop workers, the disease being due, in the great majority of instances, to the bad atmosphere, unclean surroundings, and insanitary habits of the employees of the shops, both when at labor and in their homes. In most cases, the "sweat-shop" and the home are in one and the same building. Therefore, Dr. Jones instructed his inspectors to make a note of all persons found suffering from tuberculosis. In one case inspectors discovered two children ill with diphtheria in a room next to that occupied by the workers. The latter was small and unventilated, and the atmosphere vitiated with unhealthy exhalations from the bodies of the workers, who were employed in making up cloaks of costly design and fabric. Dr. Jones, in proceeding against the "sweat-shops" which he claimed were violating the

law, believed that a decision of Judge Sharp, in one of the city courts, would apply. This decision was rendered in a case coming up under the cow stable ordinance, and in it, the Judge held that after the owners of such stables had been notified of the existence of the law against nuisances therein, and persisted in violating the law, they could be arrested without the formality of notice to abate the existing nuisance. Under this law, Dr. Jones sent circulars to all the owners of stables, calling their attention to the law and warrants were afterward served without additional notice. The Health Department, however, was unable to make use of this decision in its sweat-shop crusades.

This opinion of Dr. Jones is doubtless shared by medical men and the public at large: "The men who run the shops are just as responsible for the disease which is spread by the shops as though they killed a man outright. What is the use of our having laws if they can't be made operative? Serving notices has no effect. The only thing to do is to let the men know that the law exists and then arrest them and let them suffer the penalty if they keep on violating it."

Dr. John C. Eichner, of the city Health Department, who made a special investigation of "sweat-shop" conditions last summer, says in a report to the Department:

"By request I beg to submit some facts about the character of garments generally manufactured in the "sweat-shops" in Baltimore city. About three-fourths of the places visited by me last summer were making up men's and boys' fine suits. Some would make a specialty of pants, others coats and vests, while another class would make overcoats entirely.

"In quite a number of places I visited, suits were being made for letter-carriers, policemen, motormen and conductors of street cars. While I am not able to state positively that all of these uniforms were made for Baltimore firms, yet, I remember distinctly, and made a note of it, asking on several occasions who they were being made for, and found they were for Baltimore houses.

"The cheapest clothing is made up under the most unfavorable circumstances, for the price paid is so small that it is only a certain class of people who are able to compete for the work. I was told by a man who had eighteen men and two small girls working for him (the small girls generally pull out the basting threads)

that the price paid him to make a good dress coat was thirty-five cents.

"Now, as to some other goods. Quite a number of places in very crowded and unsanitary surroundings were making only underwear for men and women. These shops, however, were not very numerous, because a great deal of this work—or, in fact, nearly one-half of it—is done at the homes of some poor people, who receive a compensation of from fifteen to twenty cents per dozen. The greatest amount of finer underwear for male and female is made directly by the manufacturer on his premises.

"I only remember one place where ladies' tailor suits were made a specialty. Just now, of course, this is something new in this city.

"The greatest danger from 'sweat-shops' is the fact that they are nearly all located in houses containing from five to eight families, some of them more, each family having a number of children and if the women are not working in the shop proper they carry the goods they work upon into their own rooms, where there is great danger of almost any infectious disease. While the proprietor might be entirely ignorant of any danger, you will remember we had a case of nearly this character last year, and the measures that were used to prevent further trouble. In my judgment the 'sweat-shop' laws could be very much improved, and should be done promptly. I will add there are several cases pending in court against some of the proprietors."

The "sweat-shop" law is Chapter 302 of the Acts of 1894, and it provides that "if any individual or body corporate engaged in the manufacture or sale of clothing or of any other article whereby disease may be transmitted, shall knowingly, by purchase, contract or otherwise, directly or indirectly, cause or permit any garments or such other articles, as aforesaid, to be manufactured or made up, in whole or in part, or any work to be done thereupon, within this State and in place or under circumstances involving danger to the public health, the said individual or corporation, upon conviction in any court of competent jurisdiction, shall be fined not less than ten dollars nor more than one hundred dollars for each garment or other article so as lastly aforesaid manufactured, made up or worked upon."

The law further subjects any individual or officer of any corporation guilty under the provisions of the above section, "with the

knowledge that the offence will or may be dealt with as aforesaid, to imprisonment for from sixty days to one year," and he "may be further fined not exceeding one thousand dollars, in the discretion of the court.

"A place involving danger to the public health" is thus defined: "Any room or apartment which shall not contain at least 400 cubic feet of clear space for each person habitually laboring in or occupying the same, or wherein the thermometer shall habitually stand, during the hours of labor, at or above 80 degrees Fahrenheit, before the first day of May or after the first day of October of any year, or wherein any person suffering from a contagious, infectious or otherwise dangerous disease or malady, shall sleep, labor or remain, or wherein, if of less superficial area than five hundred square feet, any artificial light shall be habitually used between the hours of 8 A. M. and 4 P. M., or from which the debris of manufacture and all other dirt or rubbish shall not be removed at least once in every twenty-four hours, or which shall be pronounced ill-ventilated or otherwise unhealthy by any officer or board having legal authority so to do."

The concluding section of the law provides that one-half of any fine imposed upon violators shall go to any "association or society" incorporated or unincorporated, which furnishes evidence sufficient to secure the conviction of persons criminally presented under the act. The law has been in effect since April 6th, 1894.

MISCELLANEOUS.

POLICE LABOR LAW.

At the session of the General Assembly in 1898, an Act was passed (Chapter 474, printed in the report of this Bureau for that year), prohibiting the employment of members of the police force of Baltimore city in "any mechanical work or labor other than the work or labor required of" policemen under Article 4, Public General Laws. It had been customary for many years for policemen to act as carpenters, painters, and in other mechanical capacities whenever required to do so by their superiors, in work around the station houses and elsewhere, many expert mechanics of various trades being found on the force. The Act of 1898 was passed under the conviction that a policeman should perform no labor outside of police duty for the city. It becoming known to this Bureau that the Act was not being strictly observed by the police department, the attention of Governor Lowndes was called to that fact by Attorney-General George R. Gaither, and the Chief of the Bureau. The Governor promptly wrote the Board of Police Commissioners, in relation to the complaint, and the Board as promptly issued an order that in future the law should be rigidly observed, and that all mechanical work in the department should be performed by persons outside of it.

EIGHT HOUR LAW.

On April 20th, a delegation from the Electrical Workers' Union waited upon Mayor Malster and complained that the contractors for the electrical work on the Mount Royal pumping station had sublet the work of wiring the building to a firm which required its employees to work ten hours a day, instead of eight, as provided by law for all State work. A month later the president of the company having the contract was arrested, at the instance of the Federation of Labor, and was fined \$25 and costs by Justice Grannan, at the Central Police Station. The defendant claimed that the men had worked overtime voluntarily and that they were paid by the hour.

TRADES-UNIONS IN BALTIMORE.

The following lists of trades-unions in Baltimore, all of which are affiliated with the Federation of Labor, was furnished by Secretary H. L. Eichelberger, of the Federation:

American Federation of Musicians, No. 40.

Asphalt Block Layers, No. 7214.

Atlantic Coast Seamen.

Brewery Workers, No. 8.

Bricklayers, No. 1.

Bakers and Confectioners, No. 12.

Book Binders, No. 2.

Boiler Makers and Iron Ship Builders.

Bottlers Union, No. 161.

Boot and Shoe Cutters, No. 23.

Beer Drivers.

Box Makers, No. 70.

Bridge and Iron Constructors.

Carpenters and Joiners, No. 29.

Cigar Makers International, No. 1.

Coopers International, No. 32.

Carpenters and Joiners, No. 44.

Can Makers.

Candy Makers.

Electrical Workers.

Electrotypers, No. 26.

Engineers and Firemen.

German Central Labor Union.

Granite Cutters.

Garment Workers, No. 7.

Garment Workers, No. 39.

Horseshoers, No. 2.

Iron Moulders.

Journeymen Tailors.

Lathers, No. 7342.

Machinists, No. 186.

Painters and Decorators, No. 1.

Pressmen.

Plumbers Supply Makers.

Pants Makers, No. 37.

Photo Engravers, No. 2.
Press Feeders and Helpers.
Plasterers.
Pattern Makers.
Railway Trackmen.
Rammers, No. 7158.
Rammers, No. 2.
Stereotypers, No. 10.
Steam Fitters.
Stove Moulders.
Stone Pavers, No. 7314.
Stove Mounters.
Shirt Cutters.
Typographical Union, No. 12.
Typographical Union, No. 11.
Theatrical Stage Employees.
Vest Makers.
Wood Workers, No. 6.
Wood Carvers.
Wire Workers, No. 7215.
The unions organized during the year were:
Beer Drivers.
Box Makers, No. 70.
Bridge and Iron Constructors.
Candy Makers.
Engineers and Firemen.
Garment Workers, No. 39.
Journeymen Tailors.
Lathers, No. 7342.
Plumbers Supply Makers.
Plasterers.
Pattern Makers.
Railway Trackmen.
Steam Fitters.
Stove Mounters.
Stove Moulders.
Shirt Cutters.
Wire Workers, No. 7215.

The Organization Committee of the Federation had its time much occupied during the year in looking after new unions and strengthening old ones.] The Grievance Committee was composed of Joseph Flynn, chairman; H. L. Eichelberger, George W. Griesman, George A. Simpson, George Daniels, John Minor, M. R. M. Murphy, A. W. Lockwood. The committee had charge of strike matters, and made numerous reports to the Federation.

WOOD WORKERS' ORGANIZATION.

General Secretary Thomas I. Kidd, of the Amalgamated Woodworkers' Union, visited Baltimore in July, soon after the organization of the Box-Makers' Union, and at a largely attended meeting at Manhattan Hall, addressed the wood-workers and bx-makers, of whom there are about 600 in the city, on the methods of improving their condition. He said that, at that time, the Amalgamated Union had about 3300 members in good standing, and that in nearly a hundred shops only men carrying a union card could be admitted to work. The union had established itself in twenty cities, and through its efforts the earning capacity of the members had been increased \$675,000 a year, and the working time per year reduced three hundred hours per man. Speaking of trusts, Mr. Kidd said:

"There has been an attempt to divert us from our real mission by urging an attack upon the trusts. As long as there is competition in business there will be trusts. With cut prices staring them in the face, manufacturers are bound to combine. If labor can combine for self-protection, why capital is going to do the same. The true interests of the laboring men is in forming a labor trust through perfect union organizations. Then we can make the other trusts grant us what is reasonable and right."

General Organizer, J. H. Sullivan, of the American Federation of Labor, who has since been elected president of the Baltimore Federation, also addressed the meeting.

Mr. Kidd said that in Chicago, an agreement had been secured with the employers through the perfecting of the organization, by which a nine-hour work day was given, with a proviso that this was to be reduced later to eight hours, and Chicago would be the first city in which an eight-hour work day had been gained by the Wood-workers and Box-makers. Pay days were to be twice a

month, and the number of apprentices to be limited to one for each ten men. Engineers in the factories were required to be unionists, and shipping clerks must also belong to a union, in order that the stamping of scab work could be prevented. The agreement provided that sympathetic strikes declared for the upholding of union principles were not to be construed as a violation of the compact entered into by the employers and employees. The union label was required to be placed on all work turned out. Manufacturers of union-made goods in Chicago were generally given the preference by architects, dealers, contractors and the building trades because of steps taken to acquaint them with the better workmanship in the union shops. Another article of the agreement was that no mill work should go out of a factory to a building on which there was a strike of union carpenters or painters, and where scab labor had been employed instead of the strikers.

DAMAGE SUIT AGAINST UNIONISTS.

A non-union horseshoer, who alleges that he lost his place through representations made to his employer by members of the Federation of Labor and Journeymen Horseshoers' Beneficial Society and Union, No. 2, has a suit pending in the Court of Common Pleas of Baltimore city for \$10,000 damages against these members of the two organizations: George G. Nachman, Charles A. Cullen, Joseph Flynn, William Biggins, H. L. Eichelberger, M. R. M. Murphy, George W. Griesman, Edward H. Fink, John Reid, of the Federation; Charles A. Cullen, Joseph D. Whittaker, William Chapman, Benjamin F. Feelemyer, Joseph C. McGregor, John Engroff, James Keyton, William N. Farley, Michael A. Brennan and Joseph Flynn, of the Horseshoers' Union.
